Tuition, 1903-04, is $25; for 1904-05, $50. Courses, three years in length, lead to A.B. degree. Qualifications for admission are such as are afforded by the best high schools. Catalogues and information may be had by addressing Prof. R. C. BENTLEY, Clark College, Worcester, Mass.

CARROLL D. WRIGHT, President.

HARVARD UNIVERSITY

EXAMINATION FOR ADMISSION

Will be held in New York, in the West Side Branch, Y. M. C. A., 318 W. 57th St., June 22 to June 27 inclusive. The terms of admission, fees, expenses and privileges in any or all departments of the University may be learned from **DESCRIPTIVE PAMPHLETS**, which *may be had on application* to the Secretary,

HARVARD UNIVERSITY, CAMBRIDGE, MASS.

RADCLIFFE COLLEGE

CANDIDATES FOR ADMISSION

and other women who wish to take the Harvard Examinations will be examined in New York, at the same time as the candidates for admission to Harvard University. All information with regard to these examinations, may be had on application to the Sec'y of Radcliffe College, Cambridge, Mass.

MASSACHUSETTS, Andover.

The Oldest Congregational Seminary,

ANDOVER,

Begins its 96th Year Sept. 16, 1903.

For catalogue, map, and views, fully descriptive of location, buildings, courses of study, lectureships, and special facilities,

Apply to the President of the Faculty.

THE JONES SUMMER SCHOOL

Of MATHEMATICS and the LANGUAGES.

NINETEENTH SESSION, July 6—September 18.

Rapid reviews for candidates for admission to CORNELL UNIVERSITY and for conditioned students.

Address GEO. W. JONES, A.M., ITHACA, N. Y.

Abbot Academy *Andover, Mass.*

Graduate, elective, and college-preparatory courses for girls. Fine situation and buildings. Complete modern equipment. Tennis, basket ball, field hockey, golf, riding. Personal attention of teachers. Address

Abbot Academy.

The Wing Camping Trip for Boys

To Belgrade and Moosehead Lakes and vicinity, Maine. Reference to headmasters of well-known private schools. Send for circular.

J. EDWIN WING, 2 Carver St., Cambridge, Mass.

VACATION BREEZES

BLOW through every page of Miss Chase's book of stories, "In Quest of the Quaint." These stories portray the quaint corners of Canada, their people and belongings,—nooks on Bay Chaleur, the St. Lawrence, the Saguenay, Lake Huron, etc. They are written from experience (with a dash of imagination as respects the action). The illustrations were sketched on the spot. The book has three principal uses for tourists, viz:

1. AS AN INSPIRATION
2. AS A GUIDE BOOK
3. AS A MEMENTO

260 pages, 15 full-page plates, $1.50 postpaid.

FERRIS & LEACH, Publishers, Philadelphia

THE PERSONALITY OF EMERSON

By F. B. SANBORN

This volume contains Mr. Sanborn's recollections of Emerson with his account of Emerson's individuality as viewed after a long and intimate acquaintance. It includes a portrait of Emerson etched by Sidney L. Smith after the painting by David Scott done in Edinburgh in 1848, and fac-similes of two letters.

It is printed in a limited edition, exactly uniform in size, type and paper with the PERSONALITY OF THOREAU, as follows:

500 copies on toned French hand-made paper, at $5.00 net, postage extra.

25 copies on Japan paper, at $25.00 net, postage extra.

An Educational Directory.

SCHOOL TRUSTEES, PRINCIPALS, TEACHERS, and others interested are invited to consider the advantages offered by *The Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism *The Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, *The Nation* finds its readers able and anxious to secure for their children the best educational advantages.

The advertising rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

LONGMANS, GREEN, & CO.'S NEW BOOKS

LEADERS OF PUBLIC OPINION IN IRELAND

FLOOD—GRATTAN—O'CONNELL

By the Right Hon. W. E. H. LECKY. *New Edition.* 2 Vols., Crown 8vo, gilt top, $4.00 *net.* This New Edition is greatly enlarged and rewritten, and contains a new Introduction.

"The new edition of this work brings it to the level of its distinguished author's later knowledge and into harmony with his matured opinion . . . the student of history, and especially the student of the accurate history which Mr. Lecky writes, will take great satisfaction in the work in its present shape, reflecting as it does the ripe judgment of a great scholar."—*Outlook*, New York.

PRINCE CHARLES EDWARD STUART,

THE YOUNG CHEVALIER

By ANDREW LANG. New Edition. With Photogravure Frontispiece. Crown 8vo, pp. xiv+476, $2.25 *net.* By mail, $2.42.

*** The text of this work has been revised by the Author, but otherwise is the same in a cheaper form as that which was published by Messrs. GOUPIL, with illustrations in their Illustrated Series of Historical volumes.

"The production of Mr. LANG's Goupil monograph on *Prince Charles Edward Stuart*, at a cheap price, is an event of importance, as the volume not only exhibits the author at his best, writing *con amore*, yet with excellent judgment, on a favorite subject, but also embodies a large amount of matter from records previously unused. The value of these sources has already been perceived by other historians."—*Athenæum*, London.

WORDSWORTH

By WALTER RALEIGH, Professor of English Literature in the University of Glasgow, author of "Style," "The English Novel," etc. Crown 8vo, pp. 232, $2.00.

"Since MATTHEW ARNOLD'S famous essay on WORDSWORTH there has been none so illuminating as this of Professor RALEIGH'S "—*Daily Telegraph*, London.

HISTORY OF THE COMMONWEALTH AND PROTECTORATE, 1649-1656

By SAMUEL RAWSON GARDINER, Hon. D.C.L. Oxford; Litt.D. Cambridge; LL.D. Edinburgh; &c. New and Cheaper Edition. With Maps. In 4 Volumes. Crown 8vo, $2.00 each.
Vol. I.—1649-1650. Vol. II.—1651-1653. Vol. III.—1653-1655, *Ready.*

*** Mr. Gardiner left one chapter of the final volume of this work ready for publication, which will appear as Chapter XLIX. of this edition.
It will also be printed separately as a supplement to the Library Edition. 8vo, price $1.00.

"No more opportune or more delightful book of travel has appeared for many years."—*Spectator.*

THE TALE OF A TOUR IN MACEDONIA

By G. F. ABBOTT. With 8 full-page Illustrations and Map. Demy 8vo, pp. xii+344, $5.00 *net.* By mail, $5.20.

"Now that the interest of Europe is so largely concentrated on Macedonia, Mr. ABBOTT'S delightful account of his recent tour in that distressful but picturesque country has a topical interest nearly equal to its literary charm. Mr. ABBOTT has a genial sense of humor, a strong intelligence, and a limpid style, which in combination have enabled him to produce one of the best books of travel in Turkish dominions which have appeared since KINGLAKE'S 'Eothen,' and one which has a great deal in common with that immortal work."—*Spectator.*

AN ESSAY ON LAUGHTER:

Its Forms, Its Cause, Its Development, and Its Value

By JAMES SULLY, M.A., LL.D., author of "The Human Mind: a Text-book in Psychology," "Outlines of Psychology," "Studies of Childhood," etc. 8vo, $4.00 *net.* By mail, $4.64.

"Professor James Sully . . . not the first writer, of course, to propound a 'theory of laughter,' but he is perhaps the first, so far as we are concerned, to give us something near a satisfying proposition."—*The Spectator* (London).

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

Three Books for the Thoughtful

By CHARLES WAGNER

The Simple Life — *$1.25*

The Better Way — *$1.00 net; postpaid $1.08*

My Dear Mr. Wagner:
Permit me to thank you most cordially for sending me "The Better Way." I am glad to take this chance of telling you personally how much I appreciate and value your work. I preach your books to my countrymen!
With high regard, sincerely yours,
THEODORE ROOSEVELT.

By FELIX ADLER

LIFE and DESTINY

Thoughts in brief, embodying the spirit of Dr. Adler's lectures before the Ethical Culture Society.

The Nation.

NEW YORK, THURSDAY, MAY 14, 1903.

The Week.

The extraordinary turning of Democratic sympathies to Mr. Cleveland is a fine tribute to character. It shows that such solid parts and services as his can not be permanently obscured by a storm of calumny and detraction. All that he has had to do has been to wait quietly for the whirligig of time to bring him its revenges. Where all was execration, all is now acclaim. It is a kind of foretaste of the way in which history makes the scales swing even, that few buffeted men have been permitted to enjoy in their lifetime. Mr. Cleveland is entitled to take thorough satisfaction in the inclining to him again of his party's thoughts and hopes. Beyond its personal significance, there is cause for gratification in a great political organization showing signs of returning sanity. It has been running after false gods. It has been filling its belly with the east wind. Now it is beginning ruefully to pull itself together, to think that it might be just as well to try to win the country's confidence once more, and to cast about for a real leader. It is not strange that there should be mention of the name which was so long a tower of strength and a symbol of victory. But as for the actual nomination of Mr. Cleveland for the Presidency next year, that is a matter, we presume, about which his serene philosophy is not at all disturbed. Under the circumstances, it is something which neither he nor his friends can take very seriously.

Mr. Perry Heath's explanation of the postal scandals does not stop with his belief in ex-Postmaster-General Smith's kindly desire to help out his friends. That there were irregularities in the Department during the war with Spain he freely admits, saying they had the sanction of an Assistant Attorney-General, the Comptroller of the Treasury, and of the entire Cabinet. There being no money in any class of departmental funds specially set aside for the enormous task of supplying 275,000 soldiers in dozens—if not hundreds—of camps with mail matter, Mr. Smith was forced to draw upon funds appropriated for other purposes. But Mr. Heath gives us his word that the idea of funds being appropriated for private use is "utterly silly." Unfortunately, he stops there. He has nothing further to say about the irregularities in appointments and promotions, and in the many other ways which are daily being exposed. About these irregularities the public is just now very anxious to be informed, and is likely to grow more inquisitive as election time draws near. Until other reasons are forthcoming, there will be a general belief that the kind of politics for which Mr. Heath is noteworthy may have had considerable to do with bringing about the disordered and scandalous conditions with which Mr. Payne is now struggling.

The case of John C. Algood, the colored letter carrier at Gallatin, Tenn., is a more aggravated one than that of the colored postmistress at Indianola, Miss. Algood was selected for his place in the rural free delivery service under the rules and requirements of the civil-service law, upon the declination of the white man who outranked him in the competition. He owes his appointment not to favor, but to merit; his color being unknown. The Post-Office Department exercised no option in the matter, but merely confirmed what the law awarded. On Thursday, while performing his duties, he was "held up" by a band of masked men, and ordered to desist from his work of delivering letters; at the same time, not to divulge the cause of his resigning his place, but to assign false reasons. This is the approved Ku-klux method of vindicating the superiority of the white race in some parts of the South. We presume that this step is not approved by the intelligent and self-respecting people of Gallatin and the vicinity, but whether it is or not, they will have to pay the penalty for it, in the suspension of rural free delivery if need be.

There are several points of view from which the remarkable rise in cotton prices may be regarded. In so far as the fixing of this week's high price—the highest for the period in thirteen years—is a speculative operation, it is much to be regretted. Even if speculation were really a minor influence, so high a price will, if long maintained, have two unfortunate results—to check our export trade in cotton, and to derange the plans of the cotton-goods manufacturers. On the other hand, the Southern producer naturally feels much the same elation as did the Western wheat grower in the great rise of 1898, and there can be no doubt, the cotton crop being by no means disastrously "short," that the wealth of the Southern section of the United States will be greatly enhanced by the good price commanded by the staple. Briefly, it may be said that the general average rise in cotton prices, during the past four years, has resulted more largely from increasing consumption of the article than from deficient crops. The American crop now marketing is apparently under the average of the past five years, but it is very much larger than any cotton crop harvested up to 1898. In the same five years, however, annual consumption of cotton in the United States has increased over a million bales, or nearly 40 per cent., while the world's consumers, as a whole, are estimated to have increased their purchases by two million bales. How far this increased consumption would be arrested by exorbitant prices for the staple, and for the goods manufactured from it, is another question.

The Finance Minister of Mexico, Mr. Limantour, has been in New York several days on business of importance to his Government. It is understood that the subject of the monetary standard of Mexico is one of his chief concerns, and that he will extend his journey to Europe on that account. The *Times* publishes what purports to be an outline of his policy. According to this, it is proposed to demonetize the existing Mexican silver dollar and coin a new silver dollar to the amount of $100,000,000. Of course, it is to be coined on Government account solely, since the coinage of bullion for private persons could not be restricted in quantity. Such restriction of coinage is the demonetization of silver, the first step toward the gold standard, and is perfectly scientific. It is the initial step that was taken by India, Japan, Austria, Russia, and, farther back, by the members of the Latin Union. We observe, however, in the *Times's* statement, some hesitancy in acknowledging that this is a gold-standard policy. Mr. Limantour may easily be pardoned for not desiring to awaken fears at home of a radical proceeding. There will be real difficulties enough to encounter without exciting imaginary ones—the difficulty, for example, of dealing with the Mexican dollars circulating in other parts of the world. These it is proposed to treat as merchandise, and to admit as imports only at a high rate of duty. That is both right and necessary if the plan is to be carried into effect. The new Mexican dollars are to be legal tender for 50 cents each, and are to be kept at par with gold on that basis by a redemption fund of $25,000,000 gold in the Treasury. Presumably, the silver bullion to coin the new dollars will be obtained by exchange for the old ones now circulating in Mexico—the latter to be received at their market value. The $25,000,000 gold for redemption purposes would probably be obtained by a loan, for which the credit of Mexico would be ample.

The United States has undoubtedly a case for diplomatic protest to Russia, if

we care to press it. But it is equally undoubted that we shall do so with extraordinary ill grace. As a virtuous champion of the open door of trade, this country is calculated to leave all the Pecksniffs and Tartuffes of history far behind. We take Porto Rico and Hawaii, and shut them up as tight as a drum. So far as the Senate could, it tied up the Cuban trade as exclusively our own. In the Philippines, we gave the world as solemn a promise of the open door as ever Russia did in Mantchuria, and then proceeded shamelessly to violate it by trick and artifice. The Russian Foreign Office might well, if it chose, give Mr. Hay a crushing *tu quoque*. Still, as we say, there is ground for reclamation if we choose to press forward with all our inconsistencies thick upon us. Russia is formally committed to us. We may, therefore, join with England and Japan in a common note of protest. That can do no harm, and it may do good. Very likely it will bring fresh assurances from Russia, fully as valuable as those she has before given. But as for the notion of anything further, an alliance with Japan and England, or in the background a threat of war—all that is a counsel of lunacy. There is no lawful way for the Administration to ally us, of its own motion, with any foreign Power, and it would be madness to do it if there were. We can blunder into enough wars by ourselves without being dragged into one by the folly of an ally. The President will greatly misjudge the situation and misrepresent and wrong the country if he countenances any step, in this Mantchurian business, going beyond the resources of peaceful diplomacy.

It is easy to believe that the rising note of trades-union arrogance is seriously disturbing many captains of industry in the West. Some of them are openly saying that it is the greatest threat to the continuance of our industrial and commercial prosperity. The notions which thousands of agitator-driven workingmen are getting about the possibility of indefinite increases in wages and shortening of hours, are bound to lead to a bitter awakening some day. Western business men are said to have approached the President on his travels and besought him to utter some word in public against the mad extremes of labor unions. There is the more force in this appeal, in that the extravagant hopes of the agitators are based in part upon Mr. Roosevelt's speech of last summer, announcing his sympathy with organized labor, and especially upon the aid and comfort which his course gave to the striking miners last October. Such a result was predicted at the time. Indeed, it is only human nature that labor leaders should point to the report of the Strike Commission as a warrant for their propaganda and their methods. All the more reason for the President's choosing an early occasion, as he is urged by the Western men, to speak a sober word of warning on this subject.

Gov. Yates of Illinois is hesitating over the bill authorizing municipal ownership of street railways, but the vote by which the measure passed the Legislature makes its enactment certain, even if it has to be over an executive veto. The act is general in its nature, and will put street transit in every city in Illinois within popular control. It empowers cities to own, acquire, construct, maintain, and, if desired, to operate street car lines within their corporate limits. If municipal operation is not desired, a city may lease the lines, but only for a period of twenty years or less. The act does not become operative in any city until submitted to the voters and accepted by a majority. Before the city can purchase or build street-car lines, the financial project must be submitted and endorsed by three-fifths of the votes cast, or, if a bond issue is involved, by two-thirds. The bill contains no details as to fares. It is the outcome of the long fight over the renewal of the street-car franchises in Chicago, productive of so many scandals in the Legislature and the City Council. The Voters' League has purged the Council until it is representative of the most enlightened public spirit in Chicago, and the Legislature has now been compelled to render franchise-grabbing impossible.

Figues showing this city's income through its bureau of licenses during the first four months of this year tell an interesting story. For the first four months of 1901, the last year of Tammany administration, the total receipts of the Bureau of Licenses were $33,300. For the same period of the present year the receipts were $61,392, or almost double. Similar results are shown in the comparative figures for the first eight days of May, a period during which an unusual number of licenses is always applied for. The receipts for these eight days in 1901 were $12,217; this year $18,136. The explanation of these increases is that the pushcart vendors are now paying the city the fees required by law, and are thus securing for themselves the right to conduct their business, under proper restrictions, unmolested by the blackmailers to whom they formerly fell ready victims. Under the Tammany system, the vendors paid to the police and to district politicians far more than they now pay to the city, and the city, meanwhile, was robbed of its just revenues. It is said that until the present system was instituted, many of the vendors were ignorant of the existence of legal licenses, supposing that to bribe the police was the only way to secure an opportunity to ply their trade.

Baltimore must now be reckoned among cities where independent bodies of citizens devoted to the public welfare hold a balance of power in the elections. This result is clearly indicated in the election held on May 6. McLane, the Democratic candidate, who appears to have been victorious by the small margin of a few hundred votes, is described as an independent, public-spirited man, whose nomination was forced upon the Rasin machine by the better element in the party. Ex-Congressman Wachter, the Republican candidate, was nominated after a brisk primary contest with a candidate of the machine of his party. For this reason, the independent element was somewhat divided. It is certain, from the closeness of the result, that if the issue had been squarely presented between an unfit "ring" candidate on the one side and such a man as either McLane or Wachter on the other, the ring candidate would have been overwhelmed. The city is, of course, nominally Democratic by a large majority.

Further light on the direct nominations law, just placed on the statute-books of New Jersey, adds to the interest with which students of primary reform will watch the experiment. The authors of the New Jersey law have departed from the general scheme of direct nominations to the extent of attempting to preserve the convention, though preventing the manipulation of delegates by the bosses. Under the law, candidates for places as delegates to conventions are to announce themselves substantially as provided for candidates for elective offices. Their names are placed on an official ballot, printed at the expense and under the direction of the State; and, if he so wishes, the candidate for delegate may have printed opposite his name on the primary ballot the name of the person for whom he intends to vote in the convention. The authors of the law believe that under these provisions the actual contests between rival candidates for nominations will take place in the primary rather than in the convention, the latter becoming useful chiefly for the purpose of adopting a party platform and formally recording the decision of the primaries.

What's in a name? How does it happen that Lawyer Boardman of the firm of Boardman & Platt is retained by the Rapid Transit Commission and also by the Pennsylvania Railroad Company? The Commission and the railroad company represent opposing interests, in the sense that the latter is presumed to get all the privileges it can for its tunnel at the lowest possible cost to itself, while the former is bound to maintain a jealous care for the public interests, and undoubtedly does so. At the meeting of the Rapid Transit Board on

Thursday the peculiar position of Mr. Boardman as counsel for both sides was brought up in the form of a resolution approving of the same, and a communication was read from Mr. Henry George, jr., criticising the lawyer for acting as an adviser of the corporation, and at the same time as an attorney of the Commission at a salary of $10,000. Mr. Boardman, as reported in a morning newspaper, said in reply:

"When the Pennsylvania Company called on me to act in an advisory capacity, I called on you, Mr. Orr, and asked if you saw any impropriety in my so acting. You said you did not, and I asked to be released from any duties relating to the Pennsylvania franchise. I did not represent the Pennsylvania Company in its dealings with this Board."

Notwithstanding the apparent incongruity of Mr. Boardman's position, it can all be explained if we assume that his services to the Rapid Transit Commission are only nominal, that the real law business is done by somebody else, that he only lends a name to the enterprise, and that that name is Platt.

The *Evening Post* was, it appears, misled by its Havana informant in the matter of the alleged connection between Gen. Wood as inspirer, and Lieutenant Runcie as writer, of the *North American Review* article of January, 1900, on which we commented last week. Nor can that journal substantiate its other authority on which it placed reliance. We have, therefore, unwittingly given currency to a charge against Gen. Wood which must be pronounced baseless; and this we much regret.

In offering at par, on Thursday, a 3 per cent. loan for purposes of Transvaal reconstruction, the British Government has fixed a lower price—having regard to the higher interest rate—than has been allowed in any of its preceding loan issues of the Boer war period. This fact has evoked criticism in some foreign newspapers, which seem to have expected that, with return of peace, the rate at which the Exchequer could borrow ought at once to grow more favorable. But such criticism overlooks the fact that the price at which public securities can be placed depends, not merely on the position of the borrowing government, but on the question whether its borrowings are at an end or not. Return of peace very commonly means suspension of borrowing by the successful belligerent. If so, the price of its outstanding bonds might reasonably advance. But if the Government straightway finds it necessary to go on with its borrowing operations, the principle of supply and demand is at work again in the market for its securities. The £35,000,000 loan announced by the British Government last week, though not in form a British loan, nevertheless carries that Government's guarantee, and adds to the supply of securities pressing on the market for British funds. It need not be surprising, therefore, that, in order to place the loan satisfactorily, larger inducements than before had to be offered. Our own country's experience of a generation ago is a case in point. When Lee surrendered, in April, 1865, United States 6 per cents sold above 110. They fell to 105 before the year was over, and did not again reach their best price of tne war-time until 1868. The slow process of real absorption of the war-bond issues explained that phenomenon, as it does the present low price of the Transvaal loan.

The duty on corn *(i. e.*, the bread tax) in the list of British war taxes was imposed at the instance of Sir Michael Hicks-Beach with reluctance and in the face of strong opposition. The new Chancellor of the Exchequer, Mr. Ritchie, now proposes its repeal, and the opposition to this step is more clamorous, if not stronger, than that faced by Sir Michael three years ago. The Chambers of Agriculture demand its retention as a matter of protection to themselves. They hold the same position and use the same arguments as the Agrarian party in Germany; but they have no chance of success. It is impossible that England should restore the corn laws permanently without applying the same principle to other industries. To do the latter would be to turn her whole fiscal system bottom upward. No Chancellor of the Exchequer could form an estimate of his revenues under such a change. No political party could survive the storms that would sweep the hustings under a protective policy. It may be assumed, therefore, that Mr. Ritchie will take no step backward. In the debate in the House on April 23 he said that he was prepared to remit existing taxes to the amount of £10,500,000, of which £2,000,000 would be the bread tax. He expected that the latter remission would ultimately be £2,500,000.

Of course, the Liberals concur in this policy, but they hold that Mr. Ritchie does not go far enough in the reduction of indirect taxes. His budget proposes to remit £8,500,000 from the income tax. In other words, the consumers, who compose the bulk of the population, get only one-fifth of the reduction, while the well-to-do classes get four-fifths. On this statement of facts, Sir William Harcourt made a very strong speech. His remarks were not at all of the *ad captandum* sort, although he could not avoid alluding to the contention of Mr. Balfour, at the time when the bread tax was enacted, that it would not be felt by the working classes. The contention of the Ministry now is that it should be repealed as a relief to the working classes. Sir William maintained that, in the lightening of tax burdens, not merely one-fifth, but at least one-half, should be on articles consumed by all classes, tea and sugar being named as examples. Then he gave the House a sober review of England's position in the world, and what the continuance and maintenance implies. He playfully accepted for himself the title of a Little Englander, if it meant a person who objects to new enterprises and entangling alliances in various parts of the world which are bringing new responsibilities and new burdens upon a people already overtaxed. "You perorate about the Empire," he said, "but it is not the Empire that pays; it is Little England that pays." What does Australia pay for the support of the Empire? What does Canada pay? What does South Africa pay? Mr. Chamberlain had visited the latter country, and had obtained the privilege of guaranteeing a loan of £35,000,000 to repair in part the ravages of the war in the Transvaal; but that, the speaker believed, was only the first instalment. In conclusion, he expressed the opinion that England could not continue adding £5,500,000 per year to her ordinary expenditures as had been her habit of late, both in war and in peace.

Recent changes in the British navy will arouse much interest in this country because, as far as the instruction of officers goes, they are in many respects an imitation of our own system. It is now planned that every English naval officer, whether he belong to the engineering branch, to the marines, or to the executive corps, shall be an engineer. All candidates for officers are hereafter to be trained at the Dartmouth Naval College for four years, entering at twelve or thirteen years. The cadets will then go to sea as midshipmen for from two and one-half to three years, studying during this period under the officers of the ships, and undergoing annual examinations. On passing the final tests they will become sub-lieutenants, and their careers will then, for the first time, diverge. Some will choose to be permanent engineers, others will join the line—that is, become navigating and executive officers—and others will enter the Royal Marines. In many ways this resembles our own method of training officers at Annapolis and giving them two years at sea, although we do not catch them so young. But the Admiralty is not yet ready to adopt the American system of making all officers serve alternately in the engine-room or on the deck—and wisely, because the plan has by no means succeeded. Moreover, the new Admiralty scheme, so far as the original appointment of officers is concerned, is aristocratic in its tendencies, and almost reserves the corps of naval officers for the sons of the gentry and the nobility.

CORRUPTION AT THE FOUNTAIN.

Fresh ramifications of the postal scandals appear under every thrust of the probe. Postmaster-General Payne asks to be reported as having "just laughed" at new charges, but the country is not laughing. Friday's removals from office are no joke. What was first thought to be a petty irregularity in one department, now seems to be corruption which has honeycombed the whole service. Not only in the Postmaster-General's permanent establishment at Washington, but in various post-offices throughout the country, including New York and Indianapolis, suspicion of gross disregard of the law, to say nothing of favoritism and bribery, is rife and increasing. We smile at the man who was just now detected in a crude and open offer of $300 for appointment to a country post-office, yet the evidence that more refined but none the less corrupt methods are prevalent throughout the entire postal department is accumulating in the most alarming way.

Everybody is speaking of the anomaly of frauds like these occurring under a President who is at once a civil-service reformer and an honest man. Who could have imagined that the first term of Theodore Roosevelt should begin disagreeably to remind us of the second term of Gen. Grant? We have repeatedly borne witness to the pains President Roosevelt has taken to improve the public service. He has probably given more thought and labor to it, and incurred more enmities in standing up for what he believed to be his duty in that respect, than any of his recent predecessors. Abundant testimony comes to us of his readiness to coöperate with the Civil Service Commissioners, and of the better spirit which he has been able to infuse in many heads of departments. But all this only deepens the mystery. Is an honest Executive, then, no guarantee of honesty in the executive service? Mr. Roosevelt has not been personally impeccable. He has set some unfortunate examples of favoritism. His "friend Joe Murray" in place, and Byrne a District Attorney because he "has been useful to me," have been, of course, a direct if unintended encouragement to Senatorial spoils-mongers. But in the main, as we have said, he has worked hard to raise the standard of appointment to office and of fidelity in office. How is it, then, that this mortification and embarrassment of a revealed network of corruption in a great branch of the public service should have befallen precisely that President under whom we should least have looked to see it?

The true answer to this question will take us beyond personality to system. There was, after all, a certain sound sense in the famous cry of Anacharsis Clootz, "France, heal thyself of individuals!" At any rate, we must admit that a combination of many individuals is often too strong for a single one. Such we now see to be the case at Washington. An honest President is caught helpless in a dishonest system. We have before us a letter from a keen and veteran observer. Writing of the thickening postal scandals, he says: "I tell you, after thirty-five years of close official observation in Washington, that it is nonsense, child's play, idiocy, to suppose that the Executive fountains can pour out pure water as long as the Congressional cesspool empties into the fountain-head of the Departments."

This fundamental axiom of political water-infection helps us to see what an absurd figure is cut by Senator Lodge and other Congressmen who are deploring the political effect of the scandalous revelations. They even pull a long face and warn the President to make haste and bundle out the scoundrels. But who are the scoundrels? Why, the nominees of those very Congressmen. Every man of them has his "influence." All of the implicated postmasters and nearly all of the chiefs of division have been imposed upon the President by Congressmen, or the bosses behind Congressmen. For every one of Senator Lodge's rascals turned out, we may be sure that he has another just as good. There is, indeed, something very like a refinement of insult in the attitude of Senators who bewail the fact that the party is being injured by the President's delay in removing the rogues they have foisted upon him. What they ought to get from the Executive lips, when they go to him with that plaint, is such a blunt retort as President Cleveland once addressed to a Senator: "Well, I suppose you have come to ask me to appoint another horse-thief!"

But behind arrogant Congressmen stands the arrogant machine—"Organization," the wise it call. The Organization dictates to Congressmen, the latter dictate to the President. Our latest foreign critic, Ostrogorski, hits off the situation exactly when he writes that "the managers of the Organization, *disguised as members of Congress*, forced the Executive to make over the whole Federal patronage to them." That takes us back to the true source of the evil. A political system which, really representing only a minority of the party, controls nominations to elective office, and, through them, dictates the nominees to appointive office—there you have the origin of that coil of corruption in which President Roosevelt finds himself entangled. Let the most upright Executive that ever lived concede the right of the Senate to nominate as well as confirm, and he puts himself into the hands of a system whose first thought and chief aim are selfish personal gain, not public service. With such an idea dominant in the masters, how can the men be wondered at for prostituting their official position and their brief opportunity to private advantage?

Remedies for this spreading and festering evil the American people must find, if they would not all be eaten up of corruption. Every movement to extend and strengthen the classified service, in which entrance and promotion go by merit, not by "pull," must be grasped at as a means of political salvation. The higher officials, from President down, must be held to a more rigid responsibility, and forbidden themselves to act upon the principles of favoritism and "graft," if they would not see their example spread downward in accelerating demoralization. If House and President could unite to cut the claws of the Senate in the matter of patronage, so much the better. But the full remedy will not be found short of an aroused and active and independent public spirit which will fight the corrupt machine in its stronghold by making its nominations worthless, and despising alike its swords and its rewards.

REAL CURRENCY REFORM.

Telegrams from Hot Springs, Va., the other day, informed the public that a sub-committee of the Senate Committee on Finance, consisting of four Republican members (Senators Aldrich, Allison, Platt of Connecticut, and Spooner), had met there to consider the question of the national-bank currency. An outline of the plan contemplated was published as a Washington dispatch in the *Tribune* of May 7. In a general way it confirms the inferences drawn from the Aldrich bill of the last session, as contrasted with that of the House Committee on Banking and Currency, and implies that the Senate will adhere to the former. It is added, however, that Senator Spooner inclines to the principles of the House measure.

The difference between the two measures is radical. The Senate bill proposes no change from the present methods of issuing national-bank notes, but provides that the amount of Government bonds available for security therefor shall be enlarged in an indirect way by releasing bonds now held as security for Government deposits in national banks, the amount of which is about $150,000,000. The Aldrich bill proposed that bonds of State and municipal governments and of certain railroads should be accepted as collateral security for such deposits. The *Tribune's* dispatch tells us that the object of this change is to ease the Government bond market, and make it possible for bankers to obtain securities for bank circulation without paying a premium so high as to take all profit out of the note issues.

This explanation of the main object of the Aldrich bill throws light on the op-

posing principles argued for by the House and the Senate respectively. The contention of the House Committee, as set forth in the Fowler bill and report, is that a bond-secured currency never can be an elastic currency, since it requires the bank to invest as much money in procuring its circulating notes as it gains by putting them in circulation. In fact, it has to invest more, since the bonds command a premium in the market, and since some of the notes will be either in the bank's vaults or en route homeward for redemption, and will not be earning anything at such times. The cost of transportation and of printing and renewing the notes must also be paid by the issuing banks. These are sufficient reasons why the existing banknote currency is non-elastic; but the fundamental reason is that they are not based upon the "banking principle."

The *raison d'être* of banking consists in exchanging the well-known credit of the bank for the less known credit of the bank's customer. It makes no difference whether the well-known credit of the bank is issued in the form of notes or of deposits, the latter being a right to draw checks on the bank, which the banker authorizes when he discounts the customer's paper. Under the "banking principle" which prevails in all countries except the United States and that part of Great Britain called England, the law authorizes the customer, after his paper is discounted, either to draw checks against the deposit so created, or to take the bank's notes, which are issued without special security. This is an elastic currency. It rises and falls according to the demand of business, because every issue of banknotes and every return of them to the bank, whether large or small, is an expression of the wants of trade at the moment when it takes place.

On the other hand, when a bank takes out circulation under our present system, it engages perforce in a bond-speculation. The bank is an active business enterprise. It expects to earn the average rate of profit in the community of which it is a member. As a purchaser of bonds, it has to bid against retired capitalists, savings banks, executors of decedent estates, and other investors to whom security is a higher consideration than profit. Not infrequently the Government itself comes into the market as a competing buyer. The price of the bonds is thus forced up beyond the chance of the average return on the capital employed. After the banker has bought his bonds and taken out his circulation, there is no certainty that he will keep it. He must still watch the market. He must avoid a loss on the bonds, and he will make a profit on them if he can. He is a trustee for his shareholders, and he must do what their interests require. If the chance to avoid a loss, or to make a profit, presents itself, he must seize it, regardless of the effect upon the circulating medium in general. Thus the issue of notes is not the chief concern of the bank. It is secondary to something else, and this is one of the reasons why a bond-secured currency never can be an elastic currency. It is responsive, not to the wants of trade, but to the price of bonds.

THE PERSIAN QUESTION.

Lord Lansdowne's declaration in Parliament that Great Britain would not allow any other Power to establish a naval station in the Persian Gulf, has been construed as an assertion of the Monroe Doctrine, *mutatis mutandis*. And so it is, if we accept Daniel Webster's definition of the Doctrine that each nation has the right to take such steps as it deems necessary for its own safety. England's route to India is via the Red Sea and the Indian Ocean. A strong naval power in the Persian Gulf would be a menace to her line of communication. But this is not the sole reason for giving the warning. British trade in Persia itself is menaced by Russia in the north. The time has come to decide whether this trade shall be retained or not. If it is to be kept, railways must be built from the Gulf northward. They must be built with the coöperation of British capital, and protected by British fleets.

What would happen if some other nation should have a Monroe Doctrine of its own applicable to this particular part of the earth's surface? Suppose that Russia should conceive that a naval station in the Persian Gulf is necessary to her safety, and should proceed to establish one at Bunder Abbas, upon which she long ago fixed her glittering eye? Who would decide between these two conflicting necessities? Evidently nothing but powder and ball could arbitrate that question. Lord Lansdowne intended to be understood in that way. More than that, he implied that Great Britain was able to make her words good as against any Power or combination of Powers inclined to dispute her. She has virtual possession of those waters now. She has Aden and Bombay as naval bases, and no other Power has either ships or coaling stations within striking distance. Her position in the Persian Gulf is as strong as that of Russia in Mantchuria, and Lord Lansdowne's declaration may be taken as tit-for-tat to Russia's recent demands on China respecting the latter country.

The situation in the Gulf is described in Mr. H. J. Whigham's book 'The Persian Problem'—a revised collection of articles contributed by the author to the *Morning Post* of London and just published by Messrs. Scribner. Lord Lansdowne's manifesto seems to have been largely anticipated by these and similar contributions to the English press. The substance of the matter is that Russia has been pressing upon the northern frontier of Persia for several years, just as she did upon Turkestan and earlier upon Circassia. She has been gaining in trade and political influence at Teheran, and is now aiming to lay out and control a railway system for Persia. Her trade, according to Mr. Whigham, is promoted by a system of State bounties which England cannot match because bounties are contrary to her policy. On the other hand, Great Britain's facilities of transportation by water are such that she can lay down Manchester cottons in the interior of Persia at less cost than Moscow cottons can be afforded, and, with railway transportation from the Gulf northward, could undersell Russian goods in spite of Russian bounties.

The southern side of the Persian Gulf is inhabited by a sprinkling of Arabian tribes under their local sheikhs. These are under the nominal suzerainty of Turkey, but have been for fifty years or more under the immediate influence of an English Resident, who, with the help of an occasional gunboat or cruiser, has suppressed piracy in those waters, kept the slave trade at a minimum, and prevented the sheikhs from warring with each other. Outside of the Gulf and on the southern Arabian coast, is the ancient city of Muscat, ruled by its own Sultan, but also under a British protectorate of long duration. It is a significant circumstance, in view of Lord Lansdowne's recent declaration, that in 1899 the French consul at Muscat obtained from the Sultan a secret concession for a naval station at the port of Jissa, five miles from Muscat, and that when the fact became known to the British Admiral in those waters he gave immediate notice that he would prevent any such occupation of Jissa by bombardment if necessary. Mr. Whigham brings the serious accusation against the French authorities in those parts of conniving at the slave trade, and allowing the use of the French flag by slave dhows in order to win the favor of the Arabs. It is not believed, however, that such transactions received the countenance of the French Government.

At the entrance of the Gulf and on the Persian side lies the port of Bunder Abbas and the island of Ormuz. The latter is now a deserted sand heap. In Milton's time it was the synonym of royal splendor:

> "High on a throne of royal state which far
> Outshone the wealth of Ormus and of Ind,
> Satan exalted sat."

Then it was the meeting place of the trade of the East and the West, and it contained a population of 40,000. Now it is occupied by a handful of Arab fishermen. Twelve miles to the northward lies the port which Russia hopes some time to acquire as her outlet to the Indian Ocean, and it is a fact much deprecated by Mr. Whigham that writers in such influential organs of British opinion as the *Spectator*, the *National*

Review, and the *Fortnightly*, have advocated the policy of allowing Russia to take it. This policy has now been negatived decisively by the Government, and it is difficult to see how Russia can help herself in that quarter.

COPYRIGHT IN THE ENCYCLOPÆDIAS.

It may be taken as evidence of the vitality of the subject that six full quarto pages of the new 'Encyclopædia Britannica' are allowed to "Copyright." "T. E. S." deals with English, "G. H. P." with American, and "E. Ba." with Artistic Copyright. Thomas Edward Scrutton confines himself to supplementing the original contribution to the ninth edition of the 'Britannica' (by Mr. Edmund Robertson) by analyzing the subsequent judicial decisions on copyright questions, adding brief paragraphs on colonial and international copyright, and summarizing the provisions of the Berne Convention. What he contributes is necessarily accurate and valuable, and one could wish that his thorough knowledge of the subject and exceptional gift of concise summary and expression had been allowed fuller scope. He dismisses the interesting and delicate situation of copyright in Canada, for example, with the mere statement that "the desire of Canadian printers to allow or require copyright works to be reprinted or printed in Canada has given rise to a very difficult controversy."

George Haven Putnam devotes the main portion of his article to an exposition of the law of March 3, 1891, and the events leading up to its enactment. For the sake of historical accuracy, Washington should have been added to the list of cities in which were organized international copyright associations, although not there by reason of the initiative of the conference committee of the Authors' and Publishers' Leagues. The copyright-law amendments subsequent to the international copyright act are very briefly summarized, special attention being directed to the creation of the office of Register of Copyrights, the reorganization of the Copyright Office, and the kind and amount of the copyright business. The rider to the Public Documents act of January 12, 1895, providing that no "Government publication shall be copyrighted" is of sufficient importance to have been included in the summary of legislation relating to copyright. In conclusion, Mr. Putnam insists that "no little confusion and inequity" has been brought about by the typesetting clause, and that, "with this manufacturing condition out of the way, there would be nothing to prevent the United States from becoming a party to the Convention of Berne." He submits some considerations regarding the possible amendment of the laws in force, advocating, *inter alia*, an increase of the term of protection to the life of the author and for thirty years thereafter.

The longer section on "Artistic Copyright," confined entirely to English law, gives a history of the legislation in relation to works of art, and an analysis of the act of 1862, prior to which date, singularly enough, no legislation existed in Great Britain to give copyright protection to paintings, drawings, or photographs. Bills are now pending before Parliament to improve the present unsatisfactory condition of artistic copyright, which is thus summarized:

> "We have five British acts, three dealing with engraving, one with sculpture, and one with painting, drawing, and photography, and between them there is very little relation. We have three terms of duration of copyright—twenty-eight years for engraving; fourteen for sculpture, with a second fourteen if the artist be alive at the end of the first; life and seven years for painting, drawing, or photography. There are two different relations of the artist to his copyright. The sculptor's right to sell his work and retain his copyright has never been questioned so long as he signs and dates it. The painter's copyright is made to depend upon the signing of a document by the purchaser of his work. The engraver and the sculptor are not required to register; but the author's name, and the date of putting forth or publishing, must appear on his work. The painter cannot protect his copyright without registration, but this registration as it is now required is merely a pitfall for the unwary."

It is insisted that "the great obstacle in the way of securing a really good artistic bill has been the introduction into it of photography," and that "there seems considerable fear that, in any new legislation, the attempt to give the same terms to both painter and photographer may lead to great injury and injustice to the public."

The two-page article on Copyright in the 'New International Encyclopædia,' while offering no special opportunity for comment, invites suggestions in the way of revision. The assertion that copyright in published works exists in England to-day by virtue of the act of July 1, 1842, with no hint of the numerous preceding and subsequent enactments affecting literary and artistic property, is likely to mislead; and the various amendments of our own Revised Statutes relating to copyrights are ignored in the statement that "the act now in force is that of July 8, 1870, amended, in regard to its international provisions, in March, 1891." In summarizing these two acts, it was a singular slip to include the qualifying phrase "being a citizen of the United States, or a resident therein," when the chief purpose of the act of March 3, 1891, was to remove these restrictive words from the law then in force.

Readers not familiar with the subject are likely to get a wrong impression from the inclusion of "written articles" in the list of subjects of copyright protection, no point being better established than the fact (as Mr. Drone expresses it) that "publication is the beginning of statutory copyright, and a condition precedent to its existence." The copyright business was not transferred to the Librarian of Congress in 1831, as stated, but by the act of 1870, and the office of Register of Copyrights was created by a provision of the legislative appropriation act of February 19, 1897, and not by the copyright act of 1891. The term of our copyright protection is correctly stated as twenty-eight years with a right of renewal for fourteen years more, but it is incorrect to say that "this time limit is that of the original English statutes," because the original English act (of 1709) provided for a term of protection of twenty-one years for books then printed; and, for books to be printed, fourteen years from publication, with a renewal term of fourteen years more—and the English term has never been precisely the same as our present term.

The necessity for condensation in an encyclopædia article doubtless renders absolute accuracy of distinction difficult, but it might have been well to make clear that while the copies for the four libraries of Oxford, Cambridge, Edinburgh, and Dublin are required to be deposited only "on demand," the British Museum is not obliged to make any demand, and neither the copyright nor the right to sue is affected by non-delivery. The statement is made that the "term for art copyright is fixed, under the act of 38 Geo. III., at 28 years," but chapter 71 of that regnal year dealt only with the protection of works of sculpture, and not with works of art generally, and the term of such protection was 14, not 28 years. The law was amended by the act of May 18, 1814, which added a renewal term of 14 years, and it was repealed in 1861. No mention is made of protection for other artistic productions, such as paintings and drawings, which, together with photographs, really fall under the provisions of the "Fine Arts Copyright Act" of 1862.

The intricate matter of copyright and playright in England is dismissed with the mere statement that a dramatic production is given the same term of protection as that accorded to a work of literature; and Sir James Stephen is quoted as authority for believing that copyright in acts of Parliament probably vests in the Crown; but, after the publication of Sir James's valuable digest of the English law of copyright, a Treasury Minute of August 31, 1887, determined that acts of Parliament, among other public documents, were free for reproduction without restriction in any form whatever. The assertion that there is, under the English law, "no obligation to make registration" should be qualified by pointing out that, in the case of paintings, drawings, and photographs, registration is virtually a condition precedent to protection, as it is required to precede the infringement complained of, instead of simply preced-

ing the bringing of suit for such infringement.

Several inaccuracies occur in the brief paragraph on copyright abroad. Protection in Germany is said to date from 1871, but the act of June 11, 1870, going into effect in 1871, is no longer in force, the principal copyright laws of Germany being the acts of January 9, 1876 (for sculpture), January 10, 1876, (for photographs), and the two acts of January 19, 1901, one dealing with works of literature and music, and the other with the relations between publishers and authors. In Italy, copyright does not rest "upon the statute of 1865," long since abrogated, but upon the provisions of the law of May 18, 1882. In stating the period of protection in Japan to be "the life of the author and five years, or thirty-five years from date of publication, whichever term may be the longer," quotation was doubtless made from the ordinance of 1887; but that alert Eastern nation passed a new copyright law on March 3, 1899, and extended the term of protection to the life of the author and thirty years after his death. Injustice is done to Spain, also, the country which has still the longest statutory term of protection, in stating that term to be life of the author and thirty years, whereas it is really life and eighty years. The attempt to deal with so important a subject in two octavo pages invited failure, and it is to be hoped that opportunity will offer for a more adequate handling in the "historical treatment" of the subject promised for a later volume under the caption "Literary Property."

THE ROMAN STRIKE.

FLORENCE, April 24, 1903.

The late attempt at a general strike in Rome has set the two sections of the Italian Socialists—the Revolutionary and the Reformist—at loggerheads, and the curious phase of the battle is that the *Avanti*, the general daily organ of the entire party, takes the side of Turati, the leader of the Reformists, against the leader of the Revolutionists, Enrico Ferri, who has but now been chosen as the new director of the paper since the resignation of Bissolati.

The question at issue is this: At the great Congress of Imola, Pietro Chiesa and Gino Murialdi, in their diligent and exhaustive reports on the economic organization of the industrial proletariat, while admitting the utility of a general strike as a protest against violent or reactionary political measures, demonstrated its inexpediency as an economic weapon. Moreover, they deprecated the system of unorganized, sudden, unjustified strikes in the several trades, and their conclusions were endorsed by about three-quarters of the Congress. Two hundred and eighty, under the leadership of Ferri, while agreeing as to the inopportuneness of a general strike as an economic weapon, maintained that strikes in the separate trades were the only measures calculated to ameliorate the condition of the industrial working classes, and were, moreover, educational methods of organization and preparation. They maintained that the "revolutionist leaders" in all cases of a strike, meditated or proposed, ought to mix with the strikers, moderating or stimulating the movement as might appear expedient. But during the late strike of the Roman printers, Ferri and his colleagues either remained neutral or leaned, now to this, now to that side of the combatants, and it is for this that Turati is calling them to account in very stringent fashion. He it was, as your readers may remember, who gave such powerful coöperation to the Premier (for the time Minister of Public Works) during the threatened general strike of the railway men last year. Through his activity and influence the public catastrophe was averted; and while the Prime Minister, Zanardelli, carried his point and the railway employees were placed under military discipline, very substantial benefits were obtained for them, which will be added to when the term of the convention expires, and the men, thoroughly organized, are able to make their own terms with the future managers of the railways, whether Governmental or private companies.

The printers in Italy are fairly organized in the great cities and associated in the Federazione del Libro. Some five weeks since, the Roman printers working for certain firms demanded an eight instead of a ten-hour day, and sundry other concessions. Their employers refused to pay the same wages for eight as for ten hours, offering a nine-hours day at a nine-hours wage. Upon this about 2,000 printers went on strike without consulting the heads of the Federation, and without, it appears, any reserve fund on which to subsist during their struggle. Their comrades, however, in other cities came out with generous support, but the masters took on other workmen, and this introduction of "blacklegs" (*krumiri*, so called after the African tribe which gave France a pretext for the invasion and occupation of Tunis) exasperated the men to such a point that, disorders being feared, the Government, while maintaining strict neutrality between the contending parties, called into Rome sufficient forces to overawe any revolutionary agitators, to guard the printing establishments and protect the rights of labor in the persons of the "blacklegs." During these weeks, the "Revolutionary Socialists" kept aloof, neither inciting nor moderating the strikers. They made, it is true, some attempts to arrange terms with the masters, but, failing, took no further part in the proceedings. Meanwhile the masters withdrew the offer of a nine-hours day, refused to dismiss the men summoned to replace those on strike, and refused to treat with the "Federation of the Book," declining all the proposals made by the Deputies Luzzatti and Roux (head of the great publishing house in Turin and now editor of the *Tribuna*). Thereupon the Government, after holding a full cabinet council, sent their ultimatum to the heads of the firms that have contracts with the State. Seeing that for an entire month the official publications entrusted to these firms had been, owing to the strike, suspended, to the great detriment of the public administration, an official warning was sent to the head of each firm, notifying them that if within a week they had not placed themselves in a position to fulfil their contracts, they would not only be summoned to pay the legal forfeit for past failure, but would be excluded from future bidding for Government contracts.

The defaulting firms protested against this measure, accusing the Government of partiality for the men on strike; moreover, they avowed their intention of appealing to the courts, confident of a verdict of "not guilty" on the score of coercive force (*forza maggiore*). All the commercial and industrial firms in Rome, united in their societies and associations, convoked an extraordinary meeting and proclaimed solidarity with the heads of the printing establishments—with admiration of the energy and firmness manifested for five and thirty days in resisting the unjust demands of the workmen—condemning the partisan action of the Government, prophesying a complete victory, and solemnly affirming that all the industrial and commercial firms were and would remain their stanch allies; that all were ready to share the responsibility which the Government cast on their shoulders for the non-fulfilment of their contracts, placing at the service of the printing firms all the moral and material means they possessed in order to secure the entire and indisputable triumph of their common cause. This challenge to the men on strike when the contest was at its height, was the signal for action on the part of the other working classes in Rome, where rumors of a general strike had prevailed more or less during the first days of April; and here especially it was the duty of the Revolutionist leaders to intervene to prevent a useless and most inopportune demonstration.

Enrico Ferri, requested to speak in behalf of the strike, delivered instead an academic discourse on the "Future of Human Labor." Interviewed by the correspondent of a Neapolitan newspaper, he deprecated a general strike at the moment when Rome was crowded with visitors, gathered there for the Easter ceremonies, for the great historical and other congresses; but made no attempt to prevent it. At first the typographers hesitated to obey the call—the Labor Bureau (especially the republican members of the executive) was against it; but it was evident that the working classes themselves had decided to come out as soon as the employers of labor decided on making common cause with the heads of the printing houses. First, the stonemasons on the Victor Emanuel monument abandoned their work; and the contractor, without taking on other hands, gave notice that the works would be closed until further notice. Then followed the metal workers, glassworkers, barbers, cigarmakers, bakers, butchers, newspaper vendors, bricklayers, house painters, plasterers, carpenters, etc., and 2,000 men belonging to the paper and printing trades. The cab, coach, and tram drivers struck also, thus causing considerable inconvenience to the citizens and foreigners in what, for Italy, is a "city of distances." The municipal employees, forewarned, were fore-armed, so that the gas and electric illumination was not interfered with. The hotel, restaurant, and inn servants were left in peace, so that the convenience of visitors was less infringed than in last year's strike in Florence; but these left Rome in thousands, the hotel omnibuses

serving to convey them to the station, so that the loss inflicted on the hotels, apartments, and pensions was considerable, to say nothing of the provision dealers, guides, and all the breadwinners whose chief source of gain is these very visitors. With the exception of prohibiting mass meetings in public buildings and in "the open," the authorities remained neutral, calling some 20,000 troops of all arms into Rome for the protection of the Vatican, of the obnoxious printing establishments, and of the *krumiri*. The municipal authorities, with praiseworthy promptness, provided bread and meat for all from Naples and Florence—so amply, indeed, that, when the general strike ceased, ninety quintals of bread and some $6,000 worth of provisions were distributed among the poor, many of whom were the more or less voluntary strikers themselves, and among the charitable establishments.

The Labor Bureau, whose executive had, as we have seen, disapproved of but made no attempt to prevent the strike, summoned a few friends in council—Ferri, Lollini, other Socialists and Deputies—and it was decided that, the demonstration of solidarity having been made, the strike must cease. The executive summoned the leaders of the separate trades, thanked them for their "generous manifestation of loyalty to their working comrades in misfortune," and exhorted them to return to their usual vocations, which, probably after enjoying their brief Roman holiday, they did with the utmost alacrity. No notice was taken of their absence by their employers, who had not had time to take on new hands. Giolitti, Minister of the Interior, was congratulated on his precautions for the prevention of disorder and the avoidance of bloodshed, by the King himself, and by all but the employers of the typographical strikers, who meanwhile remained in the same condition as before the general strike—even worse off, as the employers, encouraged by the pledges of the other industrial and commercial capitalists, became more resolute in refusing to treat with the Federation as such. The newspapers, which had been suspended during the strike, mostly counselled submission. The Revolutionary Socialists still kept silence, but the men were so exasperated that, when called upon by the chief mover and leader of the strike, Parpagnolli, to decide on surrender or on submission by appeal to a general referendum, 1,400 voted by ballot for the continuation of the strike, less than 300 for its cessation. Here the Labor Bureau did intervene to prove to them the utter hopelessness of holding out. So to necessity they yielded; the employers refusing to dismiss a single *krumir*, taking the strikers back one by one, according to the roll-lists, and sending personal summons to the respective houses of the men, in no case treating with the Federazione del Libro.

Clearly, every country and class must buy its own experience. A century of industrial warfare in England has reduced strikes practically to zero and theoretically to a negative, but here in Italy they are reenacted day by day all over the country. Lately did not the very schoolboys go on strike because they or their professors had misinterpreted some measure adopted by the Minister of Public Instruction? As soon as the general strike was over, the five Republican members of the executive sent in their resignation on the ground that the strike had been made without consultation with them and in spite of their disapproval. They had kept silence while it lasted in order not to add to the general confusion; but they now withdrew irrevocably. The six Socialists entreated them to reconsider their decision, and the general council of the labor board, which is the assembly of the representatives of all the organizations of the workingmen in Rome, pronounced "absolution" for all the sins of commission and omission by the entire executive, begging them to accept a bill of indemnity and all to remain at their posts. The Republicans, while heartily grateful for the encomiums of the council, affirmed that they could not consent to remain in a position in which they were unable to carry out measures beneficial, from their point of view, to the working classes, or to prevent others which they consider detrimental. Hence the Socialists felt bound also to resign, and the workers remain *pro tem.* sheep without a shepherd.

NAPOLEON'S BROTHERS.

PARIS, April 22, 1903.

M. Frédéric Masson has been adding two volumes at a time, namely, v. and vi., to his already long series on "Napoleon and his Family," which extends from 1769 to 1809. They cover the period from 1809 to 1811. We must admire M. Masson's energy when we remember that, besides the series of which we are now speaking, he has already published seven volumes on the Emperor and his two wives, and that he has several others in preparation; among them one specially dedicated to Napoleon II., the Duke de Reichstadt.

The two latest are open to criticism. As they deal exclusively with the brothers and sisters of Napoleon, who lived in different countries and had very different interests, they are wanting in unity. I found it, I confess, rather laborious work to be shifting from Holland to Spain, from Spain to Italy, from Italy to Germany. M. Masson is a conscientious searcher after the truth; he enters into infinite details, but he makes his readers somewhat too conscious of his own efforts. His style is very unequal: it is at times too conversational, too *lâché*, to use a French word, too journalistic; at other times, when he gets hold of a general idea, or when he approaches his god, Napoleon, it becomes too pompous, accumulates too many images, and is too inflated. M. Masson evidently cares much less for style than for truth, and we cannot be sufficiently grateful to him for devoting a lifetime to telling us the whole truth about the Napoleonic period.

There are, so to speak, some fundamental ideas of the Napoleonic history which M. Masson has well discerned. With a true scientific spirit he has realized in Napoleon and his family the capital importance of Corsican clannishness. *Madame mère* was a true Corsican mother; she never could have understood all her children not having a share in her Napoleon's fortune. Napoleon himself felt it his duty to raise all his brothers and sisters to the level which he had attained. His clannish instincts were somewhat contraried by the great and, it may be said, the passionate sentiment which he felt for his wife Josephine. A feeling of gratitude was mingled with his passion. He knew well the failings, the weaknesses, of his "little Creole"; but she had been his first love; she had, by her influence over Barras, made him general of the army of Italy, and the first Italian campaign had revealed to France and to the world his military genius. The first years of the Consulate were a perpetual struggle between the Bonapartes and the Beauharnais. Napoleon was faithful to his family, but he was faithful also to Josephine and to the Beauharnais; he treated Eugene and Hortense as if they were his own children. So long as he thought that he should have no heir of his own, he lavished favors on his brothers and sisters; he gave them thrones, thinking that they would remain obedient instruments of his great designs and of his politics. He soon found out that they did not mean to be simply his tools; they thought themselves as good as he; they claimed an independence which became at times threatening to his power; they took themselves *au sérieux* as sovereigns; they assumed the language and the pretensions of princes belonging to the oldest dynasties.

A great change was produced in Napoleon's mind when he divorced Josephine and allied himself to the dynasty of the Hapsburgs. What gives the chief interest to M. Masson's two new volumes is the accurate analysis of this mental evolution. Napoleon was now in hopes of having heirs of his own blood, allied to the historical families of Europe. He had always considered the kings of his own making more like French prefects than like independent rulers; he had never been satisfied with them: he now entered into a new phase, and, instead of surrounding France with allied but nominally independent provinces, he gradually added these provinces to an empire of which the limits were extending more and more. He felt in himself the qualities, the power, and the will of a great ruler of men, and could no longer endure any obstacle, even if the obstacle was a member of his own family.

It was evidently the succession of the Holy Roman Empire which Napoleon had in view when he divorced Josephine and hoped to form a dynasty himself. At the very moment when Berthier, his Ambassador Extraordinary, went to Vienna to ask officially the hand of the Archduchess Marie Louise, a senatus-consultum was issued, saying that "the Prince Imperial bears the title and receives the honors of the King of Rome." This was not enough. In 1806, after the coronation, in Paris and in Milan, Napoleon had already shown that he aspired to the supreme consecration, in Rome, of the Empire of the Occident; but he had met with opposition from the Pope. The senatus-consultum, just mentioned, established for Napoleon's successors the obligation to be crowned in Rome: "After having been crowned in the Church of Notre Dame in Paris, the Emperors shall be crowned in the Church of Saint Peter at Rome, before the tenth year of their reign."

How could this ambition be reconciled with the acts of Napoleon? He had disposed of Italy in favor of Eugene and of Murat, he had disposed of Holland in favor of his brother Louis. What will be the ultimate fate of Spain, of Germany? What will he do with his brother Lucien, with his

brother Joseph? Lucien was always considered the most intelligent of his brothers; he had refused to assist at the marriage with Marie Louise; he was living near Rome, at Canino, negotiating with Napoleon and trying in vain to obtain the recognition of his marriage with Madame Jouberthon, his second wife. Napoleon wished him to divorce her, and Lucien refused to do so. M. Masson enters into long and fatiguing details on these negotiations. The iron will of Napoleon for the first time met an equally strong will. Lucien, after a while, not thinking himself quite safe in Italy, and fearing extreme measures on the part of his brother, resolved to leave Italy, and secretly embarked at Civita Vecchia, with all his family. He was forced by various circumstances to go to Malta, where he became a prisoner of war to England, and after a while was obliged to go to England, where he landed at Plymouth. Napoleon was much incensed at his brother's conduct; he deprived him of all his dignities, and decreed that neither Lucien nor his children should be allowed to return to the territory of the Empire.

The most interesting chapter in M. Masson's sixth volume relates to the Kingdom of Spain and to King Joseph. The infatuation of Joseph is incredible, and becomes almost amusing at times. His vanity had no limit, as well as his ambition. During the Austrian campaign, Joseph, in the event of Napoleon's being killed, considered himself the possible Emperor of France, and already made plans of government. Joseph wrote to his wife: "The way I live here, in Madrid, has become intolerable to me. If my relations with the Emperor do not change, my position must be altered; if he meant to disgust me with Spain, he has succeeded. . . . The humiliating posture he would have me accept on the throne of a great nation does not suit me. . . . I don't want to be under the guardianship of my inferiors; I don't want to see my provinces administered by men who do not possess my confidence." Joseph always professed to prefer a quiet life, a country life, to everything else; he affected to be always ready to abandon the throne; but he defended his sovereign rights with the greatest tenacity. The truth is that the Emperor always corresponded with the heads of the French army in Spain, thinking that as long as Spain was not entirely pacified, it was necessary that he should direct all the military operations. He entirely disapproved the expedition which Joseph undertook to make in Andalusia, his attempts at negotiation with the Junta of Seville. Napoleon, who was essentially a soldier, cared little for the Junta, and saw clearly that the great objective of the war was Portugal and the English army, and that it was useless to lose time in Andalusia.

Joseph made proclamation after proclamation, decree after decree. He wrote to the Emperor: "Andalusia is pacified; order is reëstablished; the Junta is dissolved; its members have fled either to England or to Gibraltar; the situation is excellent." The capitulation of Baylen fully opened the eyes of Napoleon; he understood that all Joseph's declarations were mere "fausse monnaie"; he placed the administration of the Spanish provinces in the hands of the French generals, with full powers necessary for military operations. He boldly and by a stroke of the pen added Catalonia to the territories of the French Empire; his ultimate desire was to bring Joseph's mind to the necessity of abdicating, and to annex the whole of Spain to the Empire.

"In the midst of this great Spain, which does not want him, Joseph takes refuge on the raft of New Castile, with the few Spaniards attached to his fortunes, the few Frenchmen who share it, and he plays the King; while in his provinces, rich and poor, rebel or not rebel, the Emperor's generals, making themselves by degrees independent, make laws, levy taxes, dispose of the lives and property of his subjects, ignore entirely his authority, and arrange to get out of their astounding fortune all the profit possible."

This situation did not put an end to Joseph's infatuation. In a sort of delirious egotism, he took no account of the circumstances in which he was placed; he hardly felt his isolation in his kingdom. He felt as if France and Europe had no other duty than to establish him safely as King of Spain. He lived among a few flatterers. He convinced himself that he had great military ability. He went so far as to write: "I wish posterity to pity a great nation for having misunderstood the King which God in His goodness had given it." This state of mind is what M. Masson calls "the royal delirium—the delirium of the *légitimes*," but he justly wonders how it could have been produced in the mind of a

"bourgeois of Ajaccio, placid, liberal moderate (or thinking himself moderate), who, in his astonishing fortune, had hitherto preserved a certain sense, a notion of the real world. His delirium was not like that of King Louis [the King of Holland], the result of illness combined with the tragic circumstances in which he had been accidentally placed; it was a special delirium, unclassified, the delirium of the throne. In virtue of his Corsican right of primogeniture, which constitutes a sort of principle, Joseph was predisposed to it; but he had resisted a purely French greatness, even the Neapolitan greatness; it was the work of Spain."

It would be tedious to enter into all the details of the last struggles of Joseph; he consented at last to leave Spain, but he had not made up his mind about an abdication; he reserved the future. He returned to France with the hope of coming to some final understanding with the Emperor; he wanted an explanation from him, and renounced all hope of a throne, though he wrote, "To live as quietly as I have lived, agitated for twenty-five years, especially for the last ten, is all I ask from the Emperor."

Correspondence.

SUPERIOR AND INFERIOR.

To the Editor of The Nation:

Sir: I am sure I voice the opinion of many of your readers in expressing an unqualified satisfaction in your recent editorials on the race question. They are of the right ring all through, and impart new hope and strength to the mind bewildered by most of the public speaking on this subject. These articles are to be the more commended that they are written from the philosophical and not the sentimental point of view, in simple elucidation of an accepted political faith and polity.

The most serious results of this controversy lie not in any continued disabilities against a particular class, bad as these results are; they are rather found in the proof they give of a weakening political faith and honor on the part of those imposing such disabilities. The race that counts itself the superior is rapidly losing its right to the title. Its loss of moral tone and fibre is daily evinced in the published utterances of distinguished professors, statesmen, and divines, who hasten to put themselves on record in words of lame apology, twisted logic, and feeble sophistry that will form strange reading to the student of history a generation or two from now.

And the race that admits itself the inferior is steadily moving forward. It has survived worse hardships and more flagrant wrongs than those arising from the sectional strifes and race prejudices of our own day, mean legislative enactments, civic tyranny, and social insult. So it will survive these latter-day wrongs, more subtly devised, and far more shameful to those imposing them than their more brutal atrocities were to the low and ignorant Legrees of an earlier time.

No; the concern of the patriot to-day is not for the black man so much as for his white oppressor. We need another Thomas Jefferson and a new John Adams to teach us a few primal truths about the rights of man and the province of self-government. In the meantime the *Nation* is doing its part to preserve our moral backbone, and shame the spirit of reactionary folly and distrust which has ruined many a state and institution in the past, and may ruin ours.

Celia Parker Woolley.

Chicago, May 4, 1903.

A DISCLAIMER.

To the Editor of The Nation:

Sir: In your criticism, issue of May 7, of an article on the mulatto, in the current *Atlantic*, you express the opinion that, if that article reflects the sentiment of the committee of which the writer is a member, little is to be expected from its findings.

In justice to that committee, I am prompted to make the statement that no member of it was consulted by me in connection with the opinions expressed in the article in question, and that I have no reason to believe that any member of it holds views similar to my own. The committee is composed of five members, the undersigned being the only Southern white man on it. One of its members is Dr. W. E. B. DuBois, the most intellectual man identified with the negro race, though himself a mulatto. The business of that committee is to investigate conditions, not to put forward theories, and membership upon it can scarcely be held a bar to the expression of one's personal ideas.

I may also add that I had no knowledge of the fact that any statement of my association with that committee was to be made in connection with the appearance of the article noticed by you.

Very truly yours, Alfred H. Stone.

200 A Street, S. E., Washington, May 9, 1903.

THE STRIKE COMMISSION'S REPORT.

To the Editor of The Nation:

Sir: A more careful examination of Bulletin No. 46 of the Department of Labor

would have shown you that the hiatus between premises and conclusion in the report of the Anthracite Strike Commission, referred to in your editorial, "Strike-Commission Logic," in the current number of the *Nation* (No. 1975), was supplied by the report itself.

Your report of the finding in response to claims (1 and 2), as quoted, is qualified by the following quotation:

"In attempting a comparison with other occupations, we are met at once with the embarrassing condition that in such occupations the rate of wages paid by the day or month is uniform, while in the work of contract miners, who are paid by the yard, car, or ton, the number of days or hours represented by the earnings is a varying quantity, and the number of days in which he is actually employed at all, may be much fewer than the average number of days constituting a year's work in most other employments."

The report of the Strike Commission contains much more in the same line indicated by this quotation. Here is a sample: "Take, for example, the year of 1901, a year of more than usual activity in mining operations; the average number of days throughout the region on which work was started was approximately 260. The number may have been less."

Again, your quotation of the finding in response to claim 5, to the effect that the hazard of the contract miner is not greater than "in the fisheries, and in those of switchmen and freight-train crews on our railroads," is qualified by what immediately follows, viz., "Still the requirements are exacting, and this fact has been duly weighed by the Commission, in coming to a decision upon the demand for an increase in the rate of compensation of contract miners."

In several other respects the report of the Strike Commission qualifies your point-blank findings, as quoted. Finally, the Commission, in its report upon this branch of the case, which relates to contract miners, and only one of the four demands made by the miners, and which is not the whole case, as you erroneously state, steps naturally and connectedly from premises to conclusion by the following statement immediately preceding the finding on this part of the case, as quoted by you, without any astonishing "*therefore*," in manner following, which I quote in full:

"Reviewing the whole case, and acting upon the conviction produced by the hearing of testimony, and the examination of statistics, the Commission is of the opinion that, in view of the interruptions incident to mining operations, the increased cost of living, the uncertainty as to the number of days during the year presenting an opportunity for work, and the inequalities of physical conditions affecting the ability to earn, and not overlooking the hazardous nature of the employment, some increase in the rate of compensation to contract miners should be made."

HERBERT A. DRAKE.

CAMDEN, N. J., May 11, 1903.

[The qualifications adduced by our correspondent are the very thing in question. They are part of the give and take which makes the award amenable to the criticism we applied to it. Of course, both sides were taken under consideration, but what is negatived in pretension does not prepare for what is allowed in the verdict. In other words, the Commission disallowed about 90 per cent. of the miners' contentions but granted them about 50 per cent. of their claims. As to daily rate and annual earnings, the Commission concluded that "the future demand for anthracite coal will keep the industry at its present point of activity"—that is, with all the men practically employed all the working days of the year.—ED. NATION.]

JOHN EDWARDS HOLBROOK.

TO THE EDITOR OF THE NATION:

SIR: Please allow me to correct a statement in the report of Dr. Gill's biographical memoir of Dr. John Edwards Holbrook, read at the recent meeting of the National Academy of Sciences in Washington. In your paper of April 30, page 351, you say:

"He [Dr. Holbrook] was an ichthyologist of the finest scientific quality, well known to Louis Agassiz, Jeffries Wyman and a few more, but known to very few even of the scientific world."

It is the last line to which I object. Dr. Holbrook made his reputation by his 'North American Herpetology' in five volumes, 1836-42. This is said to have been the first important scientific work produced by a native American. It received such general recognition in this country and in Europe that when the first (and only) volume of the 'Ichthyology of South Carolina' appeared, the title-page of that work described him as "Professor of Anatomy in the Medical College of South Carolina; Member of the Royal Medical Society of Edinburgh; of the Royal Society of Northern Antiquities, Copenhagen; of the Society of Naturforschende Freunde, Berlin; Corresponding Member of the American Philosophical Society; of the American Society of Arts and Sciences; of the Academy of Natural Sciences, Philadelphia; of the New York Lyceum of Natural History; and of the Boston Natural History Society."

Dr. Holbrook died in 1871.

H. H. RAVENEL.

CHARLESTON, S. C., May 6, 1903.

Notes.

G. P. Putnam's Sons will bring out 'A Political History of Slavery,' by William Henry Smith, in two volumes; 'The Anglo-Saxon Century and the Unification of the English-Speaking People,' by John R. Dos Passos; 'Modern Civic Art: The City Made Beautiful,' by Charles Mulford Robinson; and 'Psychology and Common Life,' by Frank Sargent Hoffman.

Doubleday, Page & Co. announce 'How to Keep Well,' by Floyd M. Crandall, M.D., and a 'Poultry Book' in eighteen parts, with Prof. W. G. Johnson and George O. Brown for American editors.

Macmillan Company will issue during the present month volumes i. and iii. of 'An Illustrated History of English Literature,' edited by Dr. Richard Garnett and Edmund Gosse, in four volumes; 'Why the Mind Has a Body,' by Prof. C. A. Strong of Columbia; and 'A Fight for the City [New York],' by Alfred Hodder.

An interesting announcement is that, in the reorganization of the London house of Routledge, its American agency passes to E. P. Dutton & Co. of this city.

A tiny forerunner of this centennial anniversary month is 'Every Day with Emerson,' compiled by Harriet A. Townsend (Buffalo), by arrangement with Houghton, Mifflin & Co. Prose and verse extracts fill out the year on the rubricated pages. Less dainty and comely, but fuller, is the 'Thoughts from Emerson for Every Day in the Year,' selected by Ann Bachelor (Boston: James H. Earle & Co.). Oddly enough, while the verse of the Concord philosopher is quite disregarded, each month is introduced by a seasonable poetical extract from some other poet.

An attractive little edition of R. L. Stevenson's 'Memories and Portraits' is put forth by Herbert B. Turner & Co., Boston, with a liberty which substitutes for the essay called "The Manse" an early production, "The Philosophy of Umbrellas." Among the other pieces is that "Humble Remonstrance" with Henry James for a critique of 'Treasure Island,' supplemented by a briefer comment on Mr. Howells's theorizing about his own art.

For the thirteenth time Dauchy & Co. of this city issue their annual 'Newspaper Catalogue,' geographically arranged, with lists of religious and "class publications," of newspapers in foreign languages, and of such as use "patent outsides (or insides)," with some other distinctive features for the benefit of advertisers.

The stout volume entitled 'The Kaiser's Speeches, forming a Character Portrait of Emperor William II.,' translated and edited by Wolf von Schierbrand, upon the basis of a compilation made with the imperial sanction by A. Oscar Klaussmann, but more inclusive (Harpers), is a useful *corpus*, but not above criticism as a piece of bookmaking. It gives really more than it promises, being to a large extent a chronicle of the Emperor's doings and journeyings as well as speeches. It gives less than it should, because there is no index, and because the typography adopted confounds the imperial words with the editor's elucidations. Hence it is not easy to find one's way even with the aid of the awkward classification adopted—"The Kaiser for Peace and Reconciliation," "Promoting the Welfare of the Empire," "The Kaiser in More Intimate Circles," with numerous sub-divisions. Surely, a strict chronological arrangement would have been preferable, with the least thread of historic connection, and then a first-rate analytical index, in which the political and the psychologic aspects would have shone out. As it is, where should one look for expressions of the Emperor's mediæval view of the divine right of kings? In the last-named category, section "The Kaiser and his Family"! The translation has the idiomatic defects one might expect, but is faithful in intent. The preface contains the just observation that what shocks Americans, for example, in the Emperor's speeches often touches "chords in the German soul which would not have vibrated otherwise."

No English writer has ever known more of the history of Siena and its institutions than Mr. Heywood, the author of 'Our Lady of August,' the 'Ensamples of Fra Filippo,' and various other works concerned with the past of that most fascinating of Italian city-states. It was a brilliant idea of the Sie-

nese publisher, E. Torrini, to get this accomplished scholar to write down in popular, even seductive, form the history of Siena, and to supplement it with a very complete and genuinely critical account of its art, by Lucy Olcott (Mrs. F. M. Perkins). The resulting volume forms a guide-book, the like of which scarcely exists for any other town—a guide-book at once more critical and constructive than Mr. Langton Douglas's, more careful and select than Mr. Gardner's, both which works we have recently reviewed in these columns. It is a sign of the times, by the way, that Siena is beginning to absorb so much attention, and it is even more refreshing a sign that, in the book we are now considering, Sodoma is no longer the chief attraction of Siena. You might as well journey to Athens to spend all your admiration upon the Temple of Zeus, ignoring the Parthenon and all the other glories of the Acropolis.

The popularizing of Plato is not always judiciously done, and, on the whole, in an age like ours, when not to have definite and serious views on education is to be thought flippant, one is likely to hear only too often of the 'Republic' of Plato, a storehouse from which one can always point a moral. But Professor Lewis Campbell, having boldly ignored the advice of Joubert not to live on Plato, but to visit him now and again for change of air, is an excellent guide. His little book entitled 'Plato's Republic' (Home and School Library Series, E. P. Dutton & Co.) sums up in 176 pages certain aspects of the 'Republic' that have impressed himself and Jowett. The style is quite informal, the illustrations are pleasing, and one who should make the acquaintance of Plato from these chapters would probably feel impelled to further researches into the dialogues.

The third number of the new *Hibbert Journal* contains several articles of unusual interest. Rhys Davids writes on Buddhism as a living force, finding a favorable environment for this cult in present conditions. Less philosophical, but of a practical importance that should result in its being read by all those interested in missionary work in foreign fields, is the striking article by Josiah Oldfield, on the failure of Christian Missions in India. American contributors are well represented; Prof. B. W. Bacon writing on the Johannine problem, and Prof. G. B. Stevens on Sabatier and the Paris School of Theology.

In the *National Geographic Magazine* for May, Mr. Cyrus C. Adams shows how the geographic conditions of this country have contributed to its development. Among these are its diversity of climate and products, its situation on the same side of the tropics with the great buyers of our food commodities, our harbors and rivers (affording, on a basis of three feet as the minimum depth of navigability, 14,000 miles of navigation measured in a straight line). The remainder of the number, with the exception of the notes, is devoted to our work in the Philippines, the conquest of the bubonic plague, the improvements in Manila, and the attempts to develop the agricultural resources which, according to Gov. Taft, must always constitute the wealth of the islands. A marked feature of the number is the eighteen full-page illustrations, which are of unusual merit and interest.

The scientific *Beilage* of the Munich *Allgemeine Zeitung* is publishing a series of instructive articles on the merits and demerits of the literary language of modern Greece, in which the pros and cons are defended with unusual vigor. Several weeks ago Dr. Krumbacher of Munich, the recognized leader of Modern Greek philology in Western Europe, and the occupant of the only university chair in Germany devoted to this department, published a discussion of the subject, in which with great learning he argued for the substitution of the popular Greek of the day in place of the *Kunstsprache* which practically holds supreme sway in Hellenic literature. A keen reply to this comes from the pen of Dr. Kleanthes Nikolaides, a Greek who has spent about two decades in research in Western university centres, and who makes a determined defence of the modern adaptation of the classical idiom now current in Greek literature. He declares that ninety-nine out of every hundred educated Greeks would protest against the use of the vulgar idiom for literary purposes, just as the Low Germans from the Dutch borders to the Baltic province would protest against the elevation of the Plattdeutsch to an equal rank with the literary German. He further insists that the classical movement proceeds from the people at large; the rioters some twelve months ago in the interests of the "Gospel Language" being not the ecclesiastical or academic authorities, but the rank and file of the people, who understand the literary Greek just as well as the North German peasant understands the language of the pulpit, the court, and the press. Every attempt to establish newspapers in the popular dialect of Greece has failed. The editor, in commenting on this article of Nikolaides in No. 58, states that Professor Krumbacher will continue the discussion.

The publication house of Hermann Seemann in Leipzig announces that it will soon issue a collection of writings and speeches of President Roosevelt, under the general title of 'Der Amerikanismus.' The translator is Paul Raché, who will also furnish a lengthy introduction. A specimen of the contents, a chapter entitled "Die Monroe Lehre," is published in the *Allgemeine Zeitung*, No. 63, and shows fairly good work, along with unmistakable evidences of translation. The other chapters are headed: "Der Wahre Amerikanismus; Der Amerikanische Junge; Das Volle Leben; Volksleben und Volkscharakter."

The interesting news comes from Stockholm that the Swedish authorities have decided to establish in that city an Arctic Museum on a grand scale, in which the imposing collections brought from the Arctic regions by Scandinavian investigators are to be deposited and arranged systematically. The majority of these treasures are to be found in the Royal Museum of Natural Sciences in Stockholm where the late Professor Nordenskjöld succeeded in putting the geographical and biological sections into good shape; but other finds, especially those brought from Spitzbergen, Greenland, Jan Mayen, Nova Zembla, and Siberia, are in the university collections of Upsala and Lund. The Arctic collections of Sweden are the most complete in the world, and are as unique in that line as the art treasures of the Vatican and the antiquities in the British Museum. The Swedish navigators have been systematically engaged in this work since the beginning of the last century.

The Quarterly Statement of the Palestine Exploration Fund for April contains a report by Mr. Macalister of the progress of the excavation of Gezer. He has no important discovery to chronicle, but describes the arrangement of the ancient buildings, the city walls, and the objects found, among which was a curious stone whistle. An interesting note on the famous Gate of Nicanor in the Temple of Jerusalem is contributed by Prof. Clermont-Ganneau, apropos of finding an ossuary inscribed with that name in a sepulchral cave in the neighborhood of the city. Major-Gen. Sir C. W. Wilson shows that the Golgotha and the Holy Sepulchre referred to by Eusebius in his Life of Constantine are identical with the traditional sites of the present day. In the "Immovable East," by P. G. Baldensperger, are sketched the different handicrafts mentioned in the Bible and still practised in Palestine. Our consul, Dr. Selah Merrill, notes the discovery of an immense charnel-house near Jerusalem.

Part II. of the second volume of the Korean Asiatic Society's Transactions (New York: George Stechert) contains two notable papers. The Rev. J. S. Gale, the linguist, furnishes an historical and descriptive paper on Seoul, accompanied by a map which enables the English reader to get a tolerably clear idea of the great city and its surroundings, and of the principal edifices and numerous "neighborhoods" within its walls. The map is a reproduction of one by a native cartographer, but the division into eighty-one squares, with a numeral and an alphabetic key at the top and sides, enables one readily to find a place or name. Palaces, temples, city gates, bridges, business quarters, are marked. One is impressed with the enormous antiquity of the place, even though it has been the national capital only under the present dynasty, beginning in 1392. "Type Neighborhood," if not named after the movable or "living" types which were used in Korea before Gutenberg was born, refers to the wooden stereotype blocks made by the printers of the neighborhood. As fascinating in literary style as it is philosophical in tone and exhaustive in its comprehensive outlines, is a paper on Korean Folk Tales by Prof. H. B. Hulbert. He groups the miscellaneous collection in "the back attic of Korean folk lore, . . . for the same family has occupied the house for forty centuries, and there has never been an auction," under six heads, Confucian, Buddhist, Shamanistic, legendary, mythical, and general. The Confucian stories are extraordinarily "Sunday-schoolish," of a sort somewhat out of date among us. "After one gets a little used to the formulæ, the first few lines of a story reveal to him the whole plot, including commencement, complications, climax, catastrophe, and conclusion." The Buddhist tales show a larger volume and a wider range, for here the imagination has freer play and a greater dramatic effect is possible. "To-day ten stories hinge upon Buddhism where one borrows its motive from Confucian principles." Of stories reminding one of the Holy Grail, there are several. Among the highly accomplished animals, the fox, toad, serpent, wild boar, and tiger are always bad, while the dragon, rabbit, frog and deer are always good.

The Association for Maintaining the American Woman's Table at the Zoölogical Station at Naples awarded, last month, the place to Dr. Grace Emily Cooley, professor of botany at Wellesley College, and the prize of $1,000 for the best scientific research work done by a woman, offered two years ago, to Dr. Florence R. Sabin, assistant in anatomy at the Johns Hopkins Medical School, for "an investigation on the origin of the lymphatic system embodying a discovery of far-reaching importance, believed to be the most important contribution yet made to the morphology of that system." Dr. Sabin is a graduate of Smith College. The prize offer is renewed, for award in 1905.

—The seventh and concluding volume of Doubleday, Page & Co.'s 'Variorum and Definitive Edition of the Poetical and Prose Writings of Edward FitzGerald' is the thinnest of the set. Prose predominates, and includes the exemplary memoir of Bernard Barton and obituary notices of the Rev. George Crabbe, and the account of Percival Stockdale, which even Leslie Stephen might envy as a pithy summary fit for the Dictionary of National Biography. There are also the introduction to 'Readings from Crabbe,' in which the variant seems hopelessly entangled with the *editio princeps* by some juggle of the press; and the Lamb Calendar. The verse consists of early original pieces, none of which would have secured FitzGerald a single-poem fame; least of all "Bredfield Hall," in spite of the author's own preference for it above any independent work of his. Yet some of them would be hailed by compilers of unhackneyed anthologies, and all illustrate the personal and poetic side of this man of deep feeling and strong friendships. His transfusing, as his filing, habit is shown in two paraphrases of the speech of Æmilius Paullus from Livy (which, by the way, are not collocated in the very inadequate index); and in the sonnet from Petrarch, which cannot be thought to preclude one closer to the Italian. The Bibliography is another distinguishing feature of this volume. And so we take leave of an enterprise well conceived in many respects, beautifully but not faultlessly printed, and an indispensable possession for all who revere FitzGerald's name and genius, though lacking the Letters, for which we must go to Mr. Aldis Wright's latest edition of the Works, now nearing completion from the press of Macmillan.

—Eliza R. Scidmore's 'Winter India' (The Century Co.) was doubtless pleasant to write and is likewise pleasant to read. For one who knows the sights described, which lie on the "regular Indian round," it recalls them distinctly enough, though it is doubtful whether the descriptions would raise a vivid image of them in the home-stayer. Miss Scidmore makes much of the discomforts of Indian travel as compared with American. We, who have tried both, would give our preference the other way. Indian travel taken in Indian fashion is perfectly comfortable; and Indian hotels, though not comparable to the Waldorf or the Carlton, are superior to the hotels of small New England towns. Indian service is the perfection of service. Indian politeness surpasses all other, though it only made Miss Scidmore mad when she was called "My lady." Is she mad in France when they call her "Madame"? The book may well be useful to intending travellers. It indicates a well-planned route, though omitting Kashmir, the very pearl of India. It adopts conventional judgments, but not unfair ones. More should have been said of the excellence of the early Moslem architecture of Old Delhi and its superiority to most of that of the Moghuls. The wonderful cities of Rajputana are perhaps hardly enough brought out. But the book is a good book of its kind; no one will regret reading it.

—Mrs. Aubrey Le Blond, the widow of Col. Burnaby, has an established reputation among lady climbers. In 'True Tales of Mountain Adventure for Non-climbers, Young and Old' (E. P. Dutton & Co.), she writes graphically, and she is a mountain photographer of exceptional merit. The reproductions of her photographs here printed do the originals no sort of justice. The text is readable, and will be found interesting by the general reader, for whom it is intended. Much of it consists of classical stories of mountain adventure extracted from the published works of writers of repute. The authoress has also adventures of her own to record. She does not mind using the language of lowland people. She is not ashamed to talk of "danger" where the actual risk may have been very small or actually *nil*, but the appearance or idea of danger was doubtless really present. In these days it is surprising how many folks who never were above the level of perpetual snow, read with avidity books on mountaineering. There seems to exist (so the publishers say) a definite and not small class of such readers. This is the very book for them. It will give them the very thrill they want. It is not untrue; it is not even disproportionate in its treatment of incidents. As a matter of fact, much of the time spent in climbing high mountains is spent in very dull plodding. The interesting hours are a small proportion of the whole. The exciting moments are very widely scattered. Here the exciting moments are singled out and compressed together. The result is a book which will be liked by people who like that sort of book.

—'Om Amerika' (About America), by Carl Fischer-Hansen, published simultaneously by Brentano in New York and by the Gyldendalske Boghandel in Copenhagen, a volume of 253 pages, aims, in the first place, to give the author's countrymen at home a clearer and more correct idea about things and institutions in America than is obtainable from works previously existing, and in the second place to make it easier for Danish immigrants to obtain such information about the United States as most of them will be likely to desire, and the acquisition of which would involve long years of experience with much fruitless search. Few if any literatures are so rich in books intended to give information about the United States as the Danish, almost every Danish journalist, actor, or artist who visits this country feeling called upon to record, on his return, his impressions of it; but these productions cannot, as a rule, lay claim to accuracy. The present book contains in thirteen chapters remarkably full and mostly correct information about the Union, the individual States, the currency, banking, legal institutions compared with those of Denmark, the bar (*i. e.*, the lawyers as a class), stock companies and Trusts, Stock Exchange speculation, religious matters, schools, universities, literature, and the army. It is to be feared that the price of the book will prevent it from reaching as many immigrants as were to be wished, while on the other hand the fact that the language throughout—except in the chapter dealing with American literature—bears witness to the author's long sojourn away from his native land, will probably deter many readers on the other side of the ocean. Of misstatements we have noticed a few unimportant ones. Page 121, New York city is said to be the "district" of the District Attorney; page 143, one-half of the Lutherans in the United States are said to be Germans, the other half Scandinavians, *Irishmen*, and Finns; here Irishmen (Irlændere) might be thought a misprint for Icelanders (Islændere), though even so we do not see why they should not be counted among the Scandinavians. Page 194, Mr. Carnegie is said to have given $10,000,000 to establish a *university* in Washington, D. C. Page 197, students' societies, we are told, often have as a name *one* of the three Greek letters, alpha, beta, or kappa.

—Prof. J. B. Bury, lately inaugurated as Regius professor at Cambridge, began with a lecture on the "Science of History," which affords an interesting glimpse of the present position of historical study as mapped out by a representative modern historian. Having not unhandsomely acquitted himself of his duty to the memory of the late Lord Acton, his predecessor, he spoke of "far-reaching changes in the geography of thought" initiated during the nineteenth century, and especially of the "transformation and expansion of history," not complete as yet, and still in many places ignored or unrealized. Before the last century, criticism, even in Muratori, Ducange, and Tillemont, not to be named without warm gratitude, was sporadic and capricious. To Germany and Wolf's 'Prolegomena' was due the systematized method which issued in the microscopic criticism now deemed indispensable. But there was a preparation of minds, due in part to Puritanism and partly to Rationalism, which also helped toward the elevation of all standards of truth in history, our real modern point of vantage. The spirit of resurgent nationality, characteristic of the nineteenth century, and not even now inactive, had enforced the unity and continuity of history upon patriotic minds, and swept them beyond the outlived conception of history as "philosophy by examples," as the material for political and moral science. The science of history could as little be the handmaid of literary art as of social science, he maintained. Mommsen, whom he called "the greatest living historian," derived his reputation from the 'Corpus,' the 'Staatsrecht,' and the 'Chronicles,' rather than from "that dazzling work," his Roman history. This all had come about through the "new transfiguring conception" of human development, started by Leibnitz, but first acclaimed by the nineteenth century, when it appears as the true solvent of the anti-historical doctrines arrayed during the French Revolution "against the compul-

sion of the past." This brought history into line with other sciences, and freed it from political and ethical encumbrances. The nineteenth century A. D. would rank with the fifth century B. C. in the annals of historical study. Both marked "a stage in the growth of man's self-consciousness." Perhaps the most striking and inspiring passage came toward the end, where Professor Bury declared that "the humblest student of history may feel assured that he is not working only for his own time; he may feel that he has an interest to consult and a cause to advance beyond the interest and cause of his own age." Remarkable also, as inspired by the instant and novel requirements of the hour, was his proclamation of the absolute identity between history and archæology, which last has a distinct name and place solely because it requires a special training.

—The publication, in a convenient octavo volume, with delightfully clear typography, of a general index to the first thirteen years of *Le Droit d'Auteur* directs attention to this most excellent periodical issued by the Bureau of the International Copyright Union at Berne, Switzerland. The monthly numbers of the magazine appear in a three-columned quarto page slightly larger than that of the *Nation*, the contents arranged in two divisions—"Partie officielle," containing the French texts of laws, ordinances, administrative decrees, treaties, etc.; and "Partie non-officielle," consisting of contributed monographs upon special points in copyright law, summaries of copyright decisions by the courts of various countries, and a record of all movements the world over affecting the protection of literary and artistic property. Of special note are the detailed summaries of the annual book production of the principal countries. The index seems an excellent piece of work. The first one hundred pages contain references to the contents of the journal from 1888 to 1900, arranged alphabetically under about 300 catchwords, with sub-alphabets under each, the eye being aided by a discriminating use of italic type. Then follows, as a second division, a table of official documents—laws, treaties, ordinances, etc.—arranged chronologically under an alphabet of countries, 372 separate documents being recorded. Finally, there is a chronological list of court decisions reported and commented on, with an alphabetical index of parties to the suits. *Le Droit d'Auteur*, which is published at the cost of the Berne Bureau, maintained by a pro-rata charge upon each of the countries of the International Copyright Union, is issued at the nominal subscription price of 5.60 francs per year. But libraries are now given an opportunity to secure full sets of the fourteen volumes, including the index, for 50 francs in lieu of 77.80 francs, so long as the limited stock holds out; thus permitting about 2,000 quarto pages of copyright literature, most of it of permanent value, together with this useful index, to be obtained for the sum of ten dollars. Some of the yearly volumes are understood to be already nearly exhausted; hence librarians should take prompt steps to secure sets of this admirably conducted publication, which forms one of the best collections of printed documents relating to copyright.

—The vexed question of the transliteration of Greek words has come under the consideration of a committee of the Society for the Promotion of Hellenic Studies, which was lately intrusted by the Council with the preparation of a scheme to be adopted in the *Journal of Hellenic Studies*. The scheme as adopted and now in use by the editors of the *Journal* pays due regard to the literary traditions of English scholarship. Therefore, being of the nature of a compromise, it allows in most cases a considerable latitude of usage. Its first general principle is laid down as follows: (A) "All Greek proper names should be transliterated into the Latin alphabet according to the practice of educated Romans of the Augustan age." κ=*c*; υ, αι, οι, ου=*y*, *ae*, *oe*, *u*; final ος and ον=*us* and *um*; ρος=*er*. To this rule should attach three exceptional considerations: (*a*) The diphthong *ei*, which under this rule would be either *e* or *i*, should be transliterated by *ei*, except in names like *Laodicea*, *Alexandria*, where there is a clearly established usage; words ending in ειον must be transliterated with the termination *eum*. (*b*) Discretion should rule as to occasionally retaining *os* and the like, especially in cases like Delos, where Augustan usage favors the form with *o*; Latin usage should similarly be followed as far as possible in *e* and *a* terminations, *e. g.*, Priene, Smyrna; in obscure names in ρος, such as Λέαγρος, *er* should be avoided as likely to produce confusion; the Greek form *on* is to be preferred to *o* for names like Dion, Hieron, except in a name so common as Apollo, where it would be pedantic. (*c*) Names having a definite English form, such as Corinth, Athens, should not be otherwise represented, but it is hardly necessary to point out that names like Hercules, Mercury, Minerva should not be used for Heracles, Hermes, and Athena. (B) Though names of gods should be transliterated as other proper names are, personifications and epithets like Nike, Homonoia, Hyakinthios have their special rule. (C) No accents should be used to show quantity; the circumflex is especially objectionable. (D) Greek words other than proper names, used as names of personification or technical terms, should be transliterated letter for letter—κ=*k*; υ=*y*; ου=*u*. *E. g.*, Nike, apoxyomenos, diadumenos, rhyton. But this rule should not be rigidly enforced in the case of Greek words in common English use, such as ægis, symposium. It would also be necessary to preserve *ou*=ου in such definitely established words as *boule*, *gerousia*.

THE OLD BISMARCK AND THE NEW GERMANY.

Personal Reminiscences of Prince Bismarck. By Sidney Whitman. D. Appleton & Co. 1903. Pp. 346.

Germany: The Welding of a World Power. By Wolf von Schierbrand. Doubleday, Page & Co. 1902. Pp. 376.

Whitman's 'Imperial Germany,' which was written fifteen years ago and which reached a second edition in 1891, pleased Bismarck and secured for its author an invitation to visit the ex-Chancellor in his retirement. This first visit made him what the Germans call a "house-friend," and from 1891 to 1896 he was Bismarck's guest at Friedrichsruh, Varzin, or Schönhausen, on not less than nine occasions. He witnessed in 1895 the wonderful celebration of the Prince's eightieth birthday—a tribute of national reverence and affection such as no other private citizen ever received in any country during his lifetime—and three years later he stood with Prince Herbert beside the old Prince's coffin.

In the work before us Whitman has recorded his recollections of these visits, and his impressions, not only of the Prince and his family, but of other house-friends: notably of Lothar Bucher, the revolutionary of '48 and later the Imperial Chancellor's "right hand," and of the painter Lenbach, from whom he obtained some of his best material and to whom he appropriately dedicates this volume. To our knowledge of Bismarck little is added. The author's picture of a loving and considerate husband and father, a genial and attentive host, a kind and beloved landlord, a man of so warm a heart that he was troubled by a passing glimpse (in driving) of a stranger, a workingman, who looked ill; the assertion that the "dominant memory" which the author carried away from every visit was of Bismarck's "moderation and refinement"; the judgment quoted from Dr. Schweninger, "that in his composition there was something of the tenderness of the woman, much of the *naïveté* of the child, and all the qualities of the man"—these views may surprise those who are wont to think of the great German as a Titanic bully; but to those who are at all familiar with the Bismarck literature, with the utterances of his friends and with his private letters, this side of Bismarck's character is already well known. That the ex-Chancellor's last years were sad ones, we knew already, although we have had perhaps no such outspoken confession as that which Bismarck made to Lenbach: "There is only one happy day left for me. It is the one on which I shall not wake up again."

The book is disappointing in that it contains so few of the striking phrases which nearly every other writer who heard Bismarck talk has been able to remember and record. We cannot expect, in a single generation, more than one such graphophone as Boswell or Busch, but Whitman is not even a fairly good reporter. We credit his claim that he has withheld from publication some interesting confidences because they were confidences, and we respect him for a reticence which neither Boswell nor Busch would have found intelligible; but we have a significant confession that when, on one occasion, the author jotted down a few memoranda, he found himself subsequently unable to remember what some of them meant (p. 266). It is therefore not surprising to find that of this book of reminiscences a considerable part is padding.

Of some of the minor personages the book tells us more that is new, because of them so much less has hitherto been written. The simple, strong, and somewhat eccentric personality of the old Princess is made very vivid; and of that obscure great man, Bucher, also, the author gives us an attractive sketch. From Bucher we have a judgment, prejudiced, of course, but interesting, of the present Emperor:

"The dominant influence with us at present [1892] is a queer mixture of cunning and impressionability, leading to rapid generalization based upon the observation and knowledge of the surface of things.

This in its turn leads to impulsive action" (p. 165).

Schierbrand is a good reporter, and from his three interviews with the old Bismarck in the nineties he carried away some good "copy" (pp. 350-356), which, so far as we know, has heretofore appeared only in the newspapers. American politics, Bismarck confessed, had always been "a sealed book" to him; but as far as he could pretend to understand them, they seemed to him "decadent." Cleveland, in his opinion, had "the stuff in him out of which statesmen are made," but was "thrown away in a republic." In May, 1898, less than three months before the Prince's death, his views were obtained (in spite of the opposition of his physician and his family, who were trying to shield him from fatiguing excitement) concerning the Spanish-American War. He regarded the course pursued by the United States as indefensible. Spanish misgovernment of Cuba was a mere pretext. "Colonies have often been mismanaged, and I suppose that the Americans, when they shall have colonies, will not be exempt. But that is no fair reason for dispossessing the owner. . . . Spoils, spoils—all else is pretence." His remarks about the Monroe Doctrine, which he described as an "insolent dogma," were equally interesting. The Doctrine had flourished only because of dissensions in Europe. A union of two strong naval powers like England and France could at any moment have made an end of it. On this occasion Schierbrand found Bismarck "bent and shrunken"; his hands trembled, his voice was "raucous and hollow"; but his "steel-blue eyes still shot fire," and "his intellectual faculties were unimpaired." This is not the domestic Bismarck of Whitman's acquaintance; it is the other, the public, Bismarck.

Schierbrand's book is an attempt to describe the Germany of to-day. For comprehending it, he has the advantage of German birth and education. For interpreting it to Americans, he has the advantage of long residence in the United States, and an acceptance in the main of the American point of view. He is chiefly interested in Germany's remarkable economic development and in the resulting changes in social life, but he touches also upon Germany's constitutional organization and its politics. In his discussion of German politics he seems to have been unable to escape from his early prepossessions. Only a *Fortschrittler* of the old school could allege, as he does, that the Fortschritt party (which until 1866 held the majority of seats in the Prussian Chamber of Deputies) caused Prussia to be recognized all over Germany as the champion of political progress, and that "this moral factor had as much to do as all others together in giving Prussia her hegemony, and in bringing about the formation of the North German Confederation" (p. 70). In view of the facts that this party opposed every step which the Prussian Government took towards Prussian hegemony, and that the Government realized its aims only by overriding the parliamentary opposition and disregarding the Constitution, the author can only mean that the rest of Germany was willing to come under Prussian hegemony because there were so many good Liberals in Prussia. It is hard to believe that the helpless and discredited Liberal party in Prussia exercised any such attraction, and all the contemporary evidence indicates that the Liberals of the smaller German States anticipated from Prussian hegemony the reëstablishment of absolute government throughout Germany.

Starting with this twisted construction of the facts, the author is naturally unable to account for the weakness of the Liberal party since 1878, except on the ground that its leaders have forsaken the ancient standards. To an outsider the phenomenon seems capable of a simpler explanation. The Germans who reached the voting age (25) between 1868 and 1893, and who are now from thirty-five to sixty years old, grew up during or immediately after the unification of Germany by the Prussian Crown and the Prussian army. They saw, and still see, in that achievement the complete justification of intelligently directed absolutism. They naturally have little faith in popular government. The National Liberal party, which after 1866 absorbed all the more intelligent elements of the Fortschritt, became increasingly conservative, not because its leaders changed their principles, but because an increasing proportion of their constituents had come to believe in Crown government. Under such circumstances a new popular party of opposition could develop only along lines of class antagonism, as it is to-day developing in the Social-Democratic party. It is probably in this party, which is yearly becoming less socialistic and more democratic, that the leaders of the new Radical-Liberal party will be found, and not, as the author expects (p. 363), in the left wing of the present Liberal remnant.

It is not in this matter only that the author's digressions into history are open to criticism. That *one* of the old German Emperors was a Luxemburger (p. 150), is an odd understatement. That the little principality of Reuss-Greiz, which sided with Austria in 1866, is still, in theory, at war with Prussia (p. 307), is a legend so amusing that it seems a pity to discredit it; but, as a matter of fact, Reuss-Greiz made peace by a formal treaty on September 26, 1866. Another unhistorical legend which the author repeats is that the Ultramontane or Centre party was "formed" as a result of the *Kulturkampf* (p. 79).

When Schierbrand touches upon law, he is often equally inaccurate. The assertion that Bismarck, in his Reminiscences, inferentially takes a position favorable to "pure parliamentary" government (p. 30), is based on a failure to distinguish between Constitutional and Parliamentary Government. The statement that the German Emperor has the power to declare war (p. 24) is misleading; it should be added that the consent of the Federal Council is necessary, except when an attack has been made on the territory of the empire or on its coasts. It is misleading, again, to say that the Emperor has no power to veto legislative measures (*ibid.*). His seventeen Prussian votes in the Federal Council enable him to defeat any amendment to the Constitution; and as the head (*Präsidium*) of the Council he has an absolute veto on changes of the military, naval, customs, or excise laws. In discussing the Prussian election laws, the author says that those who do not pay a certain minimum of direct taxes have no votes, not even in the third class (p. 74). This is true as regards municipal voting, but not as regards voting for the electors who choose the members of the Prussian Chamber of Deputies. The sketch of the movement for securing uniform civil law for the whole empire (p. 171) is very confused. In referring to the various systems which existed before 1900, the Roman law is disguised under the strange title of the "Imperial Law Collection"; and, while the number of legal systems is not exaggerated, the number of "codes" is greatly overstated. There were not sixteen leading codes, nor was there "a number" of other codes. The new Civil Code, in force since 1900, is incorrectly said to have established uniform law in several fields which had long before been covered by imperial legislation, *e. g.*, marriage, and bankruptcy and other commercial matters. Bankruptcy and commercial law are, in fact, not covered in the new Civil Code.

Among other *errata* we may notice the statements that Prince George, recently deceased, was the uncle of the present Crown Prince of Prussia (p. 307), and that he was the uncle of the present Emperor (p. 308); and that the German colonies of East Africa and of Southwest Africa are in north latitudes (pp. 291, 292). A theory which will strike non-Germans as being more ingenious than plausible is that the German, as such, is a modest person, and that the arrogance of the Prussians is due to infiltration of Slavic blood (p. 131). It is the common and, we think, the correct impression that the arrogance of the Prussians, like that of other people, has varied with their power, and particularly with their success in war. Prussian arrogance seems to have begun with the Great Elector, to have increased under Frederick the Great, to have abated sensibly after Jena, and to have reached its present height soon after 1866. Some of the other Germans, who are not charged with miscegenation, have shown signs of arrogance since 1870. The English began to be arrogant at a much earlier period, and some foreigners assert that the Americans are growing arrogant.

The chapters dealing with Germany's economic and social conditions and prospects, which make up the larger part of this book, constitute also its best part. The great changes of the last thirty years—the transformation of the empire from an agricultural into an industrial state, its entrance into active competition in the markets of the world, its rapidly accumulating wealth, and the resultant growth of refinement in manners and corruption in morals—all these changes are vividly portrayed. Here again the author has advantages over a foreigner or a German who has remained at home. The foreigner does not know the old Germany; and to the home-staying German the magnitude of the transformation is obscured by his familiarity with its successive stages. On the questions that most interest Americans—the position and prospects of Germany in the contest for the markets of the world and in the development of colonial empire—the author's conclusions are (to us) reassuring. Superior technical education and more perfect industrial and commercial organization give the Germans advantages over their English and American competitors, but these advantages are more than offset by the German

lack of initiative. Germany has as yet shown no capacity to establish outposts that promise to attain importance; the development of its colonies is checked by *Assessorenthum* or bureaucracy, *i. e.*, by too much governing.

The book is full of statistics. We have tested the author's accuracy in two instances only, and in one of these the result is disquieting. He says on page 92 that the imperial budget for 1898-99 reached the total of 4,980,000,000 marks. These figures bear no resemblance to the receipts or expenditures, estimated or actual, of that fiscal year; but in the 'Statesman's Year Book' for 1901 the estimated revenue for 1900-01 is stated to have been 1,979,135,000 marks. The author has apparently rounded this estimate into 1,980,000,000 marks, and retrodated it by two years—and the printer has done the rest.

One of the good things about both of the books under review is that they plead for peace and concord between the three great kindred nations—the German, the British, and the American. To-day governments all over the world are working for peace. The danger of war lies largely in the dislike and suspicion with which every people regards other peoples. This attitude toward the foreigner is, of course, as old as the human race; but it has become particularly perilous in our day, because nations, in spite of their increasing size, are growing more homogeneous and more solidary. In addition to this, they feel and will more rapidly than ever before; electricity and the newspapers have given to each national body a nervous system which responds in a day to any strong suggestion. Nothing is easier or more popular than to increase international prejudices and excite international hatred. Nothing is better worth while than to aid in creating, in one nation, that sympathetic comprehension of another nation which destroys ignorant prejudices and allays unfounded suspicions.

THE PUBLICATIONS OF THE IRISH TEXTS SOCIETY.

Giolla an Fhiugha, or, The Lad of the Ferule.—Eachtra Cloinne Righ na h-Ioruaidhe, or, Adventures of the Children of the King of Norway. Edited, with translation, notes, and glossary, by Douglas Hyde, LL.D., M.R.I.A., etc. 1899.

Fled Bricrend (The Feast of Bricriu). Edited, with translation, introduction, and notes, by George Henderson, M.A., Ph.D., etc. 1899.

Dánta Aodhagáin úi Rathaille (The Poems of Egan O'Rahilly). Edited, with introduction, translation, notes, and glossary, by Rev. Patrick S. Dinneen, M.A. 1900.

Foras Feasa ar Eirinn, le Seathrún Céitinn, D.D. (Keating's History of Ireland). Volume I., containing the Introduction and the first book of the History. Edited, with translation and notes, by David Comyn, M.R.I.A. 1902.

In 1893, when making his inaugural address as first President of the Irish Literary Society in London, the Rev. Stopford A. Brooke described a number of objects which he thought might well be cherished by such an organization. He dwelt upon the importance to Ireland, and indirectly to the whole world of letters, of building up a national and traditional Irish literature in the English tongue. To this end he advocated in particular the following undertakings: The publication of ancient Irish texts with good, faithful translations; the literary treatment in English of native Irish material, either in episodic poems like Ferguson's 'Conary,' or in larger epic compilations similar to Malory's 'Morte Darthur'; the collection of folk-tales while they can still be obtained from oral sources; and the republication of much of the Anglo-Irish poetry of the last two centuries.

In the ten years that have elapsed since this interesting address was delivered, Mr. Brooke's programme has been fulfilled in larger measure than one might have hoped. To be sure, not much that is notable has meanwhile been done in the free literary treatment of Irish saga-material. For Sir Samuel Ferguson was already dead when Mr. Brooke spoke, and his 'Deirdre' and 'Conary' still stand among the very best attempts at Irish epic in English verse. Mr. Yeats, too, who is peculiarly endowed for the interpretation of some elements in the Celtic nature, had published his 'Wanderings of Ossian' before 1893. The Irish Literary Theatre, an institution of more recent growth, has not yet succeeded in getting a large hearing for its dramas based upon episodes in Irish romance. It also remains to be seen how much vital interest is possessed by Lady Gregory's late volume, 'Cuchulain of Muirthemne,' which, if it should gain wide acceptance at all, might come to be regarded as a kind of vulgate of the older Irish saga cycle for English readers. But if work has been rather tentative, and progress small, on the side of pure literature, it is possible to make a better report of Mr. Brooke's other projects which belong more particularly to the field of scholarship. He himself, in collaboration with Mr. T. W. Rolleston and a number of contributors, has edited an admirable 'Treasury of Irish Poetry,' which contains the best of the Anglo-Irish verse since the popular songs of "ninety-eight." In the collection of folk-lore there has been steady activity. Although no such compilation of Irish tales yet exists as was made by Campbell for the West Highlands of Scotland, still—thanks to the late William Larminie, Dr. Douglas Hyde, and a dozen others—a large number of stories have now been taken down in various parts of Ireland and made accessible in either Gaelic or English. The movement for the revival of the Irish language (which seems to have entered very little into Mr. Brooke's reckoning) has given an impulse both to the collection and to the publication of these traditional tales.

Of all Mr. Brooke's proposals, however, the one of most immediate importance was probably the first, which contemplated the formation of an association, like the Early English Text Society, to secure the publication and translation of the great body of Irish literature, still largely unknown, but rich in materials for the use alike of the historical scholar and of the literary artist. We do not know whether the foundation of the Irish Texts Society was at all due to Mr. Brooke's influence, and we do not mean to claim for any one the credit for its organization; but we are glad to be able to record that, within ten years of this address upon the subject, such a society is securely established, and four volumes of its annual publications have seen the light. They are a good indication of the kind of texts which the Society will be chiefly called upon to publish. They represent some of the most interesting types of Gaelic literature, and, in three out of the four cases at least, are very good specimens of their types.

The first volume contains two modern romantic tales edited by Dr. Douglas Hyde, the President of the Society, and one of the most productive of Gaelic editors and writers. The interest of these stories is almost solely linguistic or historical. They are long, very fanciful, and so disorderly as to be hard to follow. In short, they represent a somewhat debased form of the romantic sagas of an earlier period, and as such they best repay study. One of them, "The Lad of the Ferule," belongs in part to the cycle of Celtic other-world adventures which once had considerable influence on French and English romances of chivalry, and it has been examined from this point of view by Dr. A. C. L. Brown in his forthcoming dissertation on "Sir Ywain."

The second volume contains Dr. Henderson's edition of 'The Feast of Bricriu,' an excellent old Irish Saga of the best period. The interest of the story is great, and its historical bearings important. It was a good selection with which to begin the Society's series of older texts. But the editor's work is in many respects unsatisfactory, and, in view of the competence he has manifested in Scottish Gaelic publications, most disappointing. His text is hardly as good as that published by Windisch in 1881. The translation is frequently inaccurate or infelicitous. The introductory chapters are by no means thorough or final, and the whole question of the compilation of the saga has been already reopened by Thurneysen in the *Zeitschrift für Celtische Philologie.*

The editor of the third volume, which contains the poems of Egan O'Rahilly, was confronted with the very different task of collecting from scattered manuscripts the works of a popular modern poet. Father Dinneen, by virtue of his intimate knowledge of both language and people in O'Rahilly's country, was specially equipped for the work, and has done it well. He has not undertaken to go into questions of historical grammar, or in general to do more than interpret his author's meaning, but his translation and notes will furnish grammarians and lexicographers with much valuable information about living usages. In his literary comments Father Dinneen gives an estimate of the poetic value of O'Rahilly's work, with which we cannot fully agree; yet in our gratitude for the product of his "lungo studio" we are not disposed to criticise his "grand' amore." Beyond a doubt there is much in O'Rahilly's verse—and the remark may be extended to most modern Gaelic poets—which, if judged by classic standards, is crude and inartistic, and which, from any point of view, is utterly commonplace. But the best of this Irish poetry, including some of O'Rahilly's, has great charm and human interest. In metrical structure it stands quite apart from the familiar verse-forms of Western Europe. Moreover, its substance can hardly be neglected by the historian of Ireland,

for it is the genuine expression of the native Gaelic people during the generations of British rule.

The most welcome of the works thus far issued by the society will undoubtedly be Keating's 'History of Ireland,' the first part of which constitutes the fourth volume of the publications. Keating has long been recognized as the greatest writer of Gaelic prose in the modern period, and his works have been widely circulated in manuscript; but until lately they have been by no means easily accessible in print. In 1890 Prof. Robert Atkinson brought out an admirable edition of 'The Three Shafts of Death,' which, with its grammatical appendixes and exhaustive vocabulary, furnishes one of the best existing introductions to the modern Irish language; and in 1898 a convenient, though rather imperfect text of 'An Explanatory Defence of the Mass' was issued by Patrick O'Brien in Dublin. In 1900 a small volume of Keating's poems, very competently edited by the Rev. J. C. MacErlean, was published under the auspices of the Gaelic League. But of the 'History of Ireland'—a work of more general interest than any of the preceding—no complete Irish text has been printed, and Haliday's unfinished edition of 1811 has become extremely rare. For a knowledge of the contents of the work it has been necessary to depend upon two English translations, both rare and one exceedingly inaccurate. Mr. Comyn, therefore, if he carries his undertaking to a successful issue, will be rendering a memorable service to Irish studies. His first volume does not go beyond the point reached in Haliday's edition. We are bound to say that we do not feel quite sure of the principles by which Mr. Comyn has been guided in the establishment of his text, and we should like to see a more thoroughgoing study of the manuscript tradition than his brief preface provides. Perhaps this will be supplied in one of the later volumes. For practical purposes, in the meantime, the reader is sufficiently guided by the variants recorded on every page. We look forward with interest to the volumes in which Mr. Comyn, to use his own term, will have to "break new ground."

For the excellent appearance of this important series a word of recognition is due to the house of David Nutt, which is honorably associated with other publications in the field of Celtic scholarship.

Studies in Contemporary Biography By James Bryce. The Macmillan Co. 1903.

This is one of Mr. Bryce's best books—which is saying a great deal. Most of the sketches had already appeared in print (many of them in the *Nation*); but these have been, as the author explains in his preface, enlarged and revised, some indeed "virtually rewritten." The result is that the collection has all the freshness of a new book. Many of the studies relate to men who passed from the scene twenty years ago. Of the six which deal with politicians, those on Gladstone and Disraeli are the most important, but all are worth reading, even that on Anthony Trollope (a well-worn subject), in which Mr. Bryce makes an excursus into the literature of fiction which may fairly be called, notwithstanding his great literary gifts, alien to his talents.

It is in political portraiture that he is at his best, and above all in the portraiture of House of Commons men. In this atmosphere he has lived and moved for many years, history and government are the subjects to which he has devoted his life, and consequently, when he analyzes the career of the two statesmen we have mentioned, of Robert Lowe, or of Parnell, it is with the hand not merely of a skilful writer, but of a master. But we have hardly reached this conclusion when we are forced to recall that his sketch of Mr. Godkin, not only not a House of Commons man, but a journalist, and an American journalist at that, is almost equally good. In fact, in the end, perhaps what strikes us most is the even merit and occasional striking excellence of whatever Mr. Bryce undertakes to do.

For biography he has peculiar talents, especially of style. In this respect he maintains the best traditions of English writing. He is lucid, simple, unaffected, and never weak. On the other hand, he has no secret or mystery to reveal, he writes no jargon of his own, he is no lover of novelties; and he has a profound belief in reason and right—altogether, one might think, not at all in the fashion. Yet the reader, if he be of the same turn of mind, may be consoled by the reflection that as an author Mr. Bryce long since attained a hold upon the public which promises to be permanent.

It is difficult to know exactly what to quote from a book which is rather to be read as a whole than in isolated passages, but we will content ourselves with giving one or two instances of a merit rarely found in modern biography, and for memorable examples of which we have to go back to St. Simon, or possibly to Plutarch—that of painting the *character* of the subject in a few strokes, which bring its features into a relief almost like that of a face on canvas.

"He never feared to give battle, even when he expected defeat, if he deemed it necessary (with a view to the future) that the judgment of his party should have been pronounced in a formal way. On the other hand, he was wary of committing himself to a policy of blind or obstinate resistance. When he perceived that the time had come to yield, he knew how to yield with a good grace, so as both *to support a character for reasonableness* and to obtain valuable concessions as the price of peace."

This is one aspect; now turn to another:

"He had studied the House of Commons till he knew it as a player knows his instrument—studied it collectively, for it has a collective character, and studied the men who compose it; their worse rather than their better side, their prejudices, their foibles, their vanities, their ambitions, their jealousies—above all, that curious corporate pride which they have, and which makes them resent any approach to dictation. He could play on every one of these strings, and yet so as to conceal his skill, and he so economized himself as to make them always wish to hear him. He knew how, in a body of men obliged to listen to talk, and most of it tedious talk, about matters in themselves mostly uninteresting, the desire for a little amusement becomes almost a passion, and he humored this desire so as occasionally to err by excess of banter and flippancy."

It is hardly necessary to say who this is, but if it be thought that a man well known to everybody is easier to paint than one comparatively obscure, let him turn to any one of those with whom he is least familiar. For instance, to most American readers, T. H. Green is a mere name. After reading Mr. Bryce's sketch—the essential part of which lies within the limits of a single page—his image remains imbedded in the mind.

If Mr. Bryce has a fault, it leans to virtue's side. We should describe it as over impartiality, too great a desire to be fair and just. It is absurd, perhaps, to quarrel with a trait which is at the same time what makes the author what he is; but the reader, with his inherited simian propensities, sometimes misses a little malice. There is no malice here, no foible even, on which we can put our finger. Probably in the end we shall have to admit that the defect is in us, and not in the book.

The Complete Writings of Walt Whitman. Issued under the editorial supervision of his Literary Executors, Richard Maurice Bucke, Thomas B. Harned, and Horace L. Traubel. With additional bibliographical and critical material prepared by Oscar Lovell Triggs, Ph.D. G. P. Putnam's Sons.

This edition of Walt Whitman's writings may truly be said to surpass, at several points, all recent reproductions of the *opera omnia* of any single author—first, in its mechanical execution; and, secondly, in that absolutely fearless candor which only the profoundest faith in their author can secure for editors. This faith is apt to be severely tested where so many successive versions of individual poems have been published as in Whitman's case; and the present editors do not shrink from inserting not only the details of every change, but even the unprinted variations which have hitherto existed in manuscript only. This becomes the more interesting from the fact that not a few of these alterations were made in apparent recognition of those criticisms on the score of impropriety—or, as Emerson called it, "priapism"—which so abounded in Whitman's earlier days, and to which he sometimes, though rarely, seems to have paid a discreet deference. (See 'Leaves of Grass,' iii., 107, 122, 191, etc.)

But, apart from this, it is a thing always very desirable, especially in dealing with a peculiarly original and innovating poet, to know the successive phases and forms of his literary productions, although in the case of most poets this might seem to the author himself very undesirable, since he usually prefers to preserve the final form and no other. It also throws a vast responsibility on the editor, lest he be led, like some of the early editors of Coleridge, to confuse hopelessly note-books and extract-books, and thus make his poet seem a plagiarist when he is not. Such mishaps are not quite wanting in this case, as where Walt Whitman had written down in his note-book, as a substitute for a poor version of Uhland's greatest poem, the last verse of Sarah Austen's exquisite translation, of which he alters one word only, here italicized:

> Take, O boatman, thrice thy fee—
> Take, I give it willingly;
> For, *unwittingly* to thee,
> Spirits twain have crossed with me."

This verse the editor here attributes to Whitman himself ('Leaves of Grass,' iii., 282). We have found, however, no companion instance of inaccuracy, which is saying a great deal for a work so difficult.

In other respects, the editors have shown

excellent judgment in letting Whitman speak everywhere for himself, whether in his strength or in his weakness; and this is especially to be noticed when they deal with those occasional bursts of fine humility which are too rarely visible in the writings of this remarkable man. After saying to us, in his "Backward Glance," that "it is certain that a poetry of absolute faith and equality for the use of the democratic masses never was," Whitman goes on with this touch of manly modesty:

"And whether my friends claim it for me or not, I know well enough, too, that in respect to pictorial talent, dramatic situations, and especially in verbal melody and all the conventional technique of poetry, not only the divine works that to-day stand ahead in the world's reading, but dozens more, transcend (some of them immeasurably transcend) all I have done, or could do" ('Leaves of Grass,' III., 49, 50).

Such an outburst of courageous frankness atones for a multitude of sins.

Shakspere and his Forerunners. By Sidney Lanier. In two volumes. Doubleday, Page & Co.

In this book are printed for the first time lectures delivered more than twenty-two years ago. They are presented not merely in substance, but almost exactly, as they were written, and yet the book is pervaded by a charm which almost wiles one into ignoring its defects and shortcomings. The preface, page vii., speaks of the author's idea of Shakspere as definite and vital. This seems entirely true. Hastily prepared as the manuscript undoubtedly was, the lectures were clearly built up around a live and well-defined conception. In this, in the author's earnestness, in his fervid enthusiasm, in his occasional witcheries of expression, the value of the book consists, rather than in any breadth of scholarship, depth of insight, or cogent marshalling of facts into well-massed demonstrations. The proof-reading is not impeccable; witness "inn" for "iuu" twice (I., 102); "heofourices" for "heofonrices" (I., 161); 'Εκατογπάφια far 'Εκατομπάθια (I., 200); "system" for "extreme" (II., 8); "tunes" for "words" (II., 14, line 4). The make-up of the book is handsome, and the editing generally good, but the fine full-page illustrations are seldom inserted to face the text which they often fail to illustrate. The print called "Shakspere's House at Stratford" (II., 74) is apparently from a very bad picture antedating the invention of photography. The book would have been improved had the editors omitted I., 50-52, 132-136, and most of II., 67-72, and of the conclusion, II., 312-329; the two former, expositions of Anglo-Saxon words, are of little value or interest; the two latter are largely dry recapitulations.

The hastiness of the original writing appears in some errors which the author, had he lived, might have removed. We note (I., 111) the not wholly correct exposition of the steps giving the present meaning of "gossip"; the all too common misuse (I., 216) of the phrase "that ilk"; the statement (I., 297) that the mystery play had to do with matters mysterious; the objection (II., 43) to the accepted derivation of "madrigal," and the suggestion of one altogether absurd. The construing of a passage of Beowulf (I., 50-52) is somewhat infelicitous. So also are the formulas and tabulations appearing frequently, as I., 25, 27, 42; II., 247, 248, 249, 253, 254. We find somewhat irritating the species of linguistic chauvinism manifested in I., 160, 161. We approve the author's admiration for the English language, but the expression is scarcely judicious. The skeleton of fiction running through chapters xvi.-xviii. is likewise rather irritating than otherwise. In II., 279-289, Lanier certainly fails to show or even to make it seem probable that Greene was the writer travestied in the anti-masque of the artisans in "A Midsummer Night's Dream."

Chapter i., on the formal side of poetry, is left hanging in the air, as it were; for the matter to which, as originally delivered, it led up is not included in this book, but was reworked into the author's 'Science of English Verse.' Chapters xi. and xii., on the pronunciation of Shakspere's time, probably very effective in lectures and well judged for the audience to which they were addressed, are ill fitted to be read, and can bestow very little information and hardly any stimulus of interest upon even the rawest neophyte. Chapters xvi., xvii., and xviii. are entitled "The Domestic Life of Shakspere's Time," yet they really tell little or nothing about domestic life. They do set forth, by examples drawn from literature, something of the diversions of high and low, and of the books, sermons, comedies, and tragedies of the time. Chapter iv., on some birds of English poetry, is a very slight performance. In it, more forcibly than in any other part of the book, we are reminded of the lapse of time since the matter of the book was composed. It was then still possible for a scholar to believe in Sir John Mandeville as a real person, and in the book which goes by his name as reflecting the experience of actual travel in the East.

Thus far in dispraise. More welcome is the opportunity to point out the attractions of the work. Chapters xx. and xxi., on the metrical tests for the order of composition of Shakspere's plays, are excellently well done, and present the subject almost as well as if written when printed. Chapter xix., on the doctors of Shakspere's time, is a pleasant, rambling discourse, informing and agreeable. Chapters v. and vi., on women and wives as exhibited in earlier English poetry, evince more than a little originality of view and clearness of insight. In chapters vii.-x., on sonnets and sonneteers, the author so warms with the congeniality of his subject that his enthusiasm communicates itself to the reader and quite carries one away. Still more is this true of chapters xiii.-xiv., on the music of Shakspere's time. All the musician, all the poet in the author come forward together to this theme, and the result is an absorbing monograph, full of information and very entertaining. Chapter ii., on the supernatural in early English and Shakspere, and chapter iii., on Nature in Early English and Shakspere, are delightfully well done. The selections taken to illustrate the points made are apparently fragmentary in respect to English literature as a whole, and seemingly chosen haphazard and hastily; yet the author manages in these chapters especially, and also elsewhere in the book, to weave his examples into a discourse which gives a lively and pleasing impression of the whole development of English thought and expression. Best of all are chapters xxii.-xxiv. They form a convincing exposition of the coördinate development of Shakspere as a metrist, a playwright, a poet, and a man; exhibit the author at his best, and are worthy of more than one reading.

Original and striking utterances in the book are not few. For instance, take what is said (I., 152) of Griselda's husband, and of Lear; or (I., 165) Lanier's objection that Chaucer's language, a hodge-podge of worn-down English words mixed with unassimilated French, should by no means be called "English undefiled"; or the dictum (I., 214) that the Elizabethans were diffuse, but diffuse in ideas, never merely diffuse in words; or, again, the distinction drawn (I., 298) between truth and reality; or yet again, the valuation (II., 212) of "Measure for Measure." And there are many felicities of expression.

The fulness of the table of contents does not excuse the absence of an index.

Unitarianism in America: A History of its Origin and Development. By George Willis Cooke. Boston: American Unitarian Association.

Heretofore, the main haunt of Mr. Cooke's literary interest has been that of New England Transcendentalism, though he has written excellent handbooks of Browning and George Eliot. It was no doubt the patient elaboration of these books, together with his 'Emerson,' 'Curtis at Brook Farm,' 'John S. Dwight,' and others, that selected him for this official history of the Unitarian body. Up to the fifth chapter it is the history of a theological and religious evolution; from thence onward it deals for the most part with different aspects of Unitarian organized activity, with a parting word on "The Future of Unitarianism," which certainly does not err on the side of too sanguine expectations.

The introduction, "English Sources of American Unitarianism," has a quite general character, allying the Unitarian origins with the Renaissance, the Reformation, and English tendencies towards toleration and rationalism. The following chapter indicates the forces that from the very beginning of the New England theocracy made for increasing liberality in church government and belief. Next we have "The Growth of Democracy in the Churches," Arminianism its theological concomitant, with the Great Awakening for its most striking incident—in the event, a significant awakening of such opposition as that of Chauncy and Mayhew. Mayhew is set down as the first pronounced Unitarian, though there were many tending to his position. The names of fifty ministers opposed to the methods of Whitefield are given. Nevertheless, there was, as the fourth chapter relates, a reactionary revival in the last decade of the eighteenth century, and it was in opposition to the dogmatic and exclusive temper of this revival that the Unitarian movement gathered head from the beginning of the nineteenth century for thirty years, in the course of which period more than a hundred churches in New England were aligned upon the liberal side, including twenty of the first twenty-five organized in Massachusetts, with the Church of the Pilgrim Fathers in the lead. Here was virtually, though not in its ultimate appearance, a secession of the exclusive orthodox dogmatists from the Congregational body, in defiance of its original spirit.

A chapter on the "Period of Controversy" emphasizes less than is common the crucial events of 1815 and Channing's contribution to the controversy on its upper side. We have an exact account of the various agencies through which the new movement expressed its thought and spirit, with a chapter devoted to the origin and early course of the American Unitarian Association. This chapter, but the whole book in a hardly inferior degree, is a monument to Mr. Cooke's careful diligence in the collection of material and to his judicious use of it. The extreme difficulty of giving such a multitude of details an agreeable literary form is obvious, but Mr. Cooke's success in this respect is more conspicuous than we should have imagined possible. One of the most engaging incidents of this chapter is Emerson's service (1827) as missionary of the new organization on the Connecticut River, illustrated by one of his letters detailing his experience.

Mr. Cooke's choice of a title for his next chapter, "The Period of Radicalism," is hardly justified by its contents. The period described was for the main body and large majority of Unitarians their period of ultra conservatism, near the end of it Freeman Clarke describing them aptly as "a discouraged denomination." Radicalism there was, but it was radicalism in a minority and under ban. Mr. Cooke's studies heretofore had fitted him peculiarly for the treatment of this aspect of the Unitarian development, but, as if modestly withdrawing from a field so much his own, he barely touches it, possibly because disinclined to garner where he has already reaped. What is certain is that two of the most significant moments of the Unitarian history, Emerson's Divinity School Address of 1838, with its antecedents and consequents, and Parker's South Boston sermon of 1841, are passed over in silence, nor is there more than the most casual allusion to the controversy of which these events were the elliptical centres. That no fear was here of opening old wounds we have the proof in Mr. Cooke's frank dealing with subsequent controversies that raged with extreme violence, and whose ashes are not yet perfectly cold. As touching these his book is an eirenicon, conceived in a spirit of admirable fairness to those most concerned, while he does not conceal his own satisfaction in the final outcome of each new controversy which made "the bounds of freedom wider yet."

The "denominational awakening" of 1865 was clearly a product of the superabundance of energy engendered by the civil war, finding preëminent embodiment in Dr. Henry W. Bellows, of whom Mr. Cooke writes with more warmth of admiration than of any other of the multitude of *dramatis personæ* that crowd his stage. Tuckerman's "Ministry at Large" has no more space than it deserves in a proportion where there are many pressing claims. The Sunday-school work is one of these; others are the Women's Alliance and Post-office Mission, agencies that from small beginnings have attained to a remarkable efficiency and scope. Mr. Dall's noble work in India and that of Mr. MacCauley in Japan have both honorable mention. Then come a series of chapters which tax the resources of Mr. Cooke's Unitarian restraint and modesty to a degree that in the upshot more commends his prudence than convicts him of too much complacency. If there is an exception to this ruling it is the anti-slavery part of the chapter on "Unitarians and Reforms." One gets a less favorable impression from Dr. Channing's letters and from such an event as the refusal of his church to him for a memorial service of Dr. Follen, his high-minded anti-slavery friend. On the other hand, Mr. Cooke is able to quote the praise awarded by Samuel J. May to his co-religionists. The fact is, they did better as time went on, and it was easier to do better; also, that the personal sympathy with the anti-slavery movement was always in advance of that expressed in the pulpit and in denominational action. The unsympathetic reader will probably discover in Mr. Cooke's chapters, "Unitarian Philanthropies," "Unitarian Men and Women," and "Unitarianism and Literature," a disposition on his part to "claim everything in sight"; but seldom or never does he gather anything that can easily slip through the meshes of his net. Civil Service Reform, with the Unitarians Sumner, Jenckes, and Curtis for its founders (Bellows might have been added), is paralleled by many other lines of social help, and on that of literature Mr. Cooke is able to quote Prof. Barrett Wendell: "Almost everybody who attained literary distinction in New England during the nineteenth century was either a Unitarian or closely associated with Unitarian influences." For the inheritors of this great renown there remains the proverb that dead men's shoes soon wear out, and they cannot bestir themselves too eagerly if they are hereafter to be worthy of such high descent.

Symphonics and their Meaning. By Philip H. Goepp. Second Series. Lippincott. Pp. 498.

Mr. Goepp is an enthusiast who believes that music tells a message clearer, richer, nobler, than one may hope from prose or even verse. A few years ago he wrote a book in which he tried to find and describe "the mystery of symphonies." The present volume is an extension of his analytical method and completes his survey of classic symphonies. Mozart is represented by one work, Beethoven by six (including the Pastoral and the Ninth), Schumann by two, Mendelssohn by one, Raff by three, Brahms by three. A chapter is also devoted to Liszt, Tchaikovsky, and R. Strauss, and the appendix briefly considers symphonies by Berlioz, Gade, Goetz, Gilchrist, and Goldmark. A footnote explains that the omission of the symphonies of Americans like Paine and Chadwick is due not to a lack of good will, but a lack of space. However, so far as that goes, Raff's "Winter" symphony and Gade's B flat might have been spared; nor were Beethoven's first two symphonies quite worth as much as fifty-two pages, for they were written before the composer had "found himself." Our author, too, is often diffuse. The substance of his book might have been easily condensed into half its number of pages. Apart from this, there can be nothing but praise for it. It is sympathetic, thorough, lucid; and the author fortunately realized that the only way to make such a book intelligible and useful was by giving illustrations in musical type on nearly every page.

There are Germans who still hold Mozart's symphonic works to be the *ne plus ultra* of art; some of them consider not only the romantic composers, but even Beethoven, a descent from this sublime pinnacle. But Mr. Goepp, although in the main a conservative, understands and clearly hints at the line of progress made since Mozart. In his time and Haydn's an adagio meant not so much a sad mood as "merely a decent suppression of spirits for ceremony's sake." "In those days the main business of music was to cheer and amuse"; in Beethoven it began to seek emotional utterance in all its phases. His symphonies mark the modern fondness for strong and extreme emotions. Not only are his adagios unsurpassed, but he also created the frolicsome scherzo, to supplant the languid minuet of Haydn and Mozart. Oddly enough, in his analysis of Beethoven's Eighth Symphony, Mr. Goepp makes no mention of the important quarrel between the Mendelssohnians and the Wagnerites in regard to the *tempi* of the middle movements.

It is pleasant to find a good word for Raff, whose "Lenore" and "Forest" symphonies have fallen into premature neglect. In regard to pictorial or programme music, Mr. Goepp justly points out that Raff "solved its problem successfully as to symphonies, achieving here what Mendelssohn reached only in the overture." On the other hand, he gives Raff too much honor when he intimates that "some of the melodic, harmonic, and dramatic manner that is all attributed to Wagner is quite distinctively Raff's own." It is true that, as he points out, Raff's Forest Symphony was written nine years before the Nibelung's Ring was first heard in public; but he forgets that "Tristan" was produced in 1865, four years before that symphony; and Raff was a collaborator of both Wagner and Liszt. In an American book it might not have been out of place to mention that Raff was the teacher of Edward MacDowell. With touching modesty and keen appreciation of budding genius, he said to his pupil, shortly before his death: "Your music will be famous when mine is forgotten."

For one who is so great an admirer of Brahms as Mr. Goepp, it is surprising to find him so tolerant of Liszt. True, he refers to a "lack of strong-knit musical structure in Liszt"—which is absurd, as the symphonic poem invented by him is much more logical and coherent in structure than the classical symphony with its four detached and unrelated movements. But the author reads the symptoms of the times correctly as regards the growing valuation of Liszt's music: "There are increasing signs that Liszt was the true author of much of modern vein that has been ascribed to others who merely followed in his wake."

The House of Seleucus. By Edwyn Robert Bevan. 2 vols., with plates and maps. London: Edward Arnold. 1902.

The field of Hellenistic history has been little cultivated. Most historians of Greece, inspired by love for free Hellas or for classical literature and archæology, or attracted by the relative abundance of historical material, have confined their labor to the period ending with the death of Alexander. Thirlwall's 'History of Greece,' however, oversteps this landmark, to treat the Hellenistic age in a series of

chapters which are admirable for the time when they were written; and more recently Mahaffy, especially by his 'Greek Life and Thought,' has awakened an interest in certain aspects of the same age. These were almost the only important works composed in English which had to do with the political history or the civilization of the period. The Germans have paid more attention to the subject. J. G. Droysen devoted his historical genius to the preparation of a monumental work, 'Geschichte des Hellenismus' (2 vols., 1836-43), which is practically a history of the civilized world for the period which it treats. Holm covers the ground more briefly in his excellent History of Greece, now translated into English; and at present two distinguished German scholars—Niese in his 'Geschichte der griechischen und makedonischen Staaten,' and Kaerst in his 'Geschichte des hellenistischen Zeitalters'—are presenting detailed accounts of the Hellenistic age from modern points of view.

Mr. Bevan's work differs from those named in applying itself to the thorough treatment of a single Hellenistic kingdom. In the preface he acknowledges his indebtedness to earlier laborers in the field. "One's obligations to Droysen and Niese are, of course, so constant and extensive that they must in a majority of cases be taken for granted; it is where one's own conclusions do not altogether tally on some point that they are in many cases referred to—a circumstance which may give the work of a younger writer an appearance of presumption which is far from the truth." In this respect the author has followed the English rather than the German custom. He certainly deserves full credit for independence of judgment; but could he not have better satisfied the scholarly reader by giving continuous references to his modern as well as his ancient authorities? This method would have greatly facilitated the study of the subject.

The author's task has been difficult. Most of the ancient authorities for the period lived ages after the events which they describe, and are generally uncritical and shallow. The material is not only inferior in quality, but scant and fragmentary; it leaves wide gaps at most important crises, and rarely affords a glimpse of the political organization and administration, the social and intellectual life, and the economic condition of the empire (subjects of the greatest interest to the serious modern reader), but presents instead a dreary maze of unintelligible wars. Mr. Bevan has supplemented the scant literary sources by the use of coins and inscriptions, and by attention to the physical conditions and the ethnography of the Seleucid empire. Chapter ii. is, accordingly, a brief but valuable presentation of "The Physical Environment," in which the author summarizes the geographical and racial character of the nearer East; and in the course of the work entire chapters are devoted to the physical features and the population of the various provinces in relation to the empire as a whole. Although these parts of his history will doubtless prove highly instructive, they lack the freshness of interest which one might expect of a writer who has himself visited the countries he describes. It is to be regretted, too, that throughout the narrative the author has not brought out more boldly the relation of the political events to the physical environment. Perhaps the most interesting chapters are the first, "Hellenism in the East," and the last, "Government, Court, and Army." The author's analysis of Hellenism is remarkably keen and thorough. It is his great merit never to lose sight of the truth that in the Seleucid court and kings he has to do with Greeks, and that his theme is Greek civilization on Asiatic soil. This idea gives the work unity and a definite purpose. As to the importance of the Seleucid government in universal history he says:

"We have tried to get some idea in outline of the constitution of the Seleucid realm. To do so is interesting, not so much as calling up the picture of things long passed away, but as studying a phase in the tradition which has come down to us. For when Rome became an Empire with a monarchic court and system, it followed to a large extent, both in its inner principles and its external forms, the Greek kingdoms which it superseded. A real continuity of tradition bound the court and government of the Cæsars to the court and government of Seleucid and Ptolemy, and the tradition sanctioned by the authority and majesty of the Roman name continued as a sort of ideal in the Middle Ages, shaping institutions which in their turn have gone to make the modern world."

The author shows little disposition to generalize, and still less dramatic power. His narrative is sober, unimaginative, and clear, designed to instruct rather than to stimulate or entertain. The work seems to be in a high degree trustworthy, and may be earnestly recommended to those who wish to study the period. It comes, too, most opportunely, as recent international events have directed the attention of the world to Asia.

Two Important New Science Text-Books

Noyes's Organic Chemistry

By Prof. Wm. A. Noyes, of the Rose Polytechnic Institute. xvii+534 pp. 12mo, $1.50 *net.*

An attempt to present the fundamental principles of organic chemistry for the use of beginners acquainted with the elements of inorganic chemistry. Its most radical departure in method consists in the dropping of the division into "fatty" and "aromatic" compounds and in the adoption of what appears to the author a more fundamental and logical classification.

Pierce's Plant Physiology.

By Prof. Geo. J. Pierce, Stanford University. 291 pp. 8vo $2.00 *net.*

A modern and thoroughly scientific discussion of the general principles of plant physiology, intended for the student or general reader acquainted with the elements of botany.

BOOKS OF THE WEEK

HITHERTO UNPUBLISHED LETTERS

THE CORRESPONDENCE BETWEEN RALPH WALDO EMERSON AND HERMAN GRIMM

Edited with an Introduction, by **Frederick W. Holls.** With Portraits.

Some of the most characteristic and significant letters Emerson ever wrote were written by him in the course of his protracted correspondence with Grimm, the great German art critic. These have been edited, with an introduction by Frederick W. Holls, and are now first published. The letters from Grimm are printed both in German and in English. Narrow 16mo, bound in parchment and rubricated throughout, $1.00 *net*. Postage 5 cents.

OF INTEREST TO ANTIQUARIAN AND HISTORIAN

THE CONFISCATION OF JOHN CHANDLER'S ESTATE

By Andrew MacFarland Davis

A letter written in 1828 has been discovered that recounts the misfortunes which befell Colonel John Chandler of Worcester in 1774 because of his loyalty to the King. The author has covered the incidents referred to at that time, and also has included transcripts from several old documents that form the basis of the laws and processes followed by the patriots in revolutionary times in the punishment of their Tory neighbors. 8vo, $3.00 *net*. Postage 18 cents.

VALUABLE TO OWNERS OF COUNTRY ESTATES

TREES AND SHRUBS

Edited by **Charles Sprague Sargent,** author of "The Silva of North America."

In this work, the first part of which appeared last autumn, Professor Sargent treats new and little known trees and shrubs such as would be expected to flourish in the gardens of the United States and Europe. The plates are notable examples of skill and accuracy, being reproductions of original drawings made by Mr. C. E. Faxon, the best botanical draughtsman in America. There are to be four parts to a volume. Vol. I. Part II. ready. 4to, $5.00 *net*, postpaid.

A BRILLIANT SOCIETY NOVEL

HIS DAUGHTER FIRST

By **Arthur Sherburne Hardy,** Author of "But Yet a Woman."

Mr. Hardy has never created more attractive characters or presented a truer or more delightful picture of certain aspects of our life to-day. The plot of the novel turns upon love entanglements at a house-party and the complications of the New York money market. Crown 8vo, $1.50.

FAVORITE CHARACTERS

TRENT'S TRUST

By Bret Harte

A group of new stories, the material for which was found after Mr. Harte's death. The tales all deal with old pioneer life in California which Harte has immortalized, and many of the favorite characters reappear. 12mo, $1.25.

A NEW BOOK FOR BOYS BY EDWYN SANDYS

TRAPPER "JIM"

By the author of "Upland Game-Birds," etc. With many illustrations. Full of the things a boy delights in, hunting, fishing, camping, etc.

Published this week. Cloth, 12mo. $1.50 net. (Postage, 13c.)

COMPLETED TO-DAY WITH THE ISSUE OF VOL. IV

Encyclopedia Biblica

A CRITICAL DICTIONARY OF THE LITERARY, POLITICAL, AND RELIGIOUS HISTORY, OF THE ARCHÆOLOGY, GEOGRAPHY, AND THE NATURAL HISTORY OF THE BIBLE

EDITED BY

The Rev. T. K. CHEYNE, D.D.

Oriel Professor of the Interpretation of Holy Scripture at Oxford University.

AND

J. SUTHERLAND BLACK, LL.D.

Formerly Assistant Editor of the "Encyclopædia Britannica."

Assisted by One Hundred Contributors in America, Great Britain, and Europe.

In four volumes, quarto. Cloth, $20 *net;* Half morocco, $30 *net.*

Sold only by subscription. Write to the publishers for a full descriptive circular, with terms of payment by "special cash price" or in instalments.

"There is nowhere accessible in the English language such a body of knowledge as this."—*Christian Register.*

Mr. JAMES BRYCE'S New Book

STUDIES IN CONTEMPORARY BIOGRAPHY

Twenty sketches of eminent men of the 19th century, by the author of "The American Commonwealth," etc.

Cloth, 8vo, $3.00 net. (Postage17c.)

"As all except Lord Beaconsfield were known to Mr. Bryce personally, the result is something intimate, unique."—*N. Y. Ev'g Telegram.*

A FIGHT FOR THE CITY

By ALFRED HODDER, *Author of "The New Americans," etc.*

Cloth, 12mo, $1.50 net. (Postage 10c.)

Mr. JEROME'S splendid fight in that dramatic campaign, the New York municipal election of 1901, is described by an eye-witness and aid.

On net books ordered from the publisher carriage is an extra charge; for sale by all dealers at net rates.

Published by **THE MACMILLAN COMPANY** 66 Fifth Ave. N. Y.

The Nation.

NEW YORK, THURSDAY, MAY 21, 1903.

The Week.

In spite of Postmaster-General Payne's ready assurance that thirty-five of the forty pages of Mr. Seymour W. Tulloch's charges against the Post-Office Department are "hot air," the extracts published by the press on Monday afford extremely interesting reading. Mr. Perry Heath is not the only political freebooter who figures in Mr. Tulloch's charges. Senator Platt and his bonding company pass across the stage, but only for a moment. That famous breeding-place of great men, Muncie, Ind., furnishes the background for one scene, and one of the leading actors, Mr. Oliver H. Smith. This gentleman, like his townsman, Mr. Neely of Cuban prison fame, was evidently a man of genius, for he was called upon to fill two positions at once. Both were laborers' places, with $2 a day for "carfare and additional expenses." Evidently Mr. Smith was a high-class workingman like Mr. Edgar S. Maclay of the Brooklyn navy-yard. Then we have the familiar charwomen who figure in every spoilsman's drama. Neither of them is to know of the existence of the other, and neither is to do any work. A "complimentary" roll of those who likewise draw pay and do nothing is a very stimulating episode, and may go far to explain why the Post-Office Department never can make both ends meet. But the *dramatis personæ* of Mr. Tulloch's setting of the interior of the Washington Post-Office do not end here. There is the familiar Porto Rican or Cuban postmaster, a highly civilizing and entertaining figure, but a trifle short in his accounts. In place of the usual populace there are travelling inspectors of military post-offices, almost all with grips marked Ohio or Indiana, drawing good salaries, and living on the fat of the land. Finally, there is the fake manufacturing concern, as familiar in our Government scandals as fake gold mines in Bowery melodramas. The final touch is an auditor's statement, "Look here now, this is a new [McKinley] Administration, and a new crowd, and we intend to make our own precedents." Mr. Tulloch published his play without "authority" and without copyright.

According to a telegram in the *Times*, the purpose of our international silver commission, consisting of H. H. Hanna, Charles A. Conant, and Prof. J. W. Jenks, who sail for Europe this week, is merely "to learn whether there is any way in which the great Powers of the world can come together in some plan to steady the rates of exchange between gold and silver-using countries." This is a laudable curiosity, although somewhat belated in the world's monetary history, when we consider the several attempts to satisfy it during the latter part of the nineteenth century. Very likely the Powers which are to be newly interrogated will retort the question on its askers, in which event the latter should be prepared to give a categorical answer. Meanwhile it is reassuring to know that our Commission has done nothing, and expects to do nothing, which will affect the monetary system of this or any other country, so far as the integrity of the gold standard is concerned. A difficulty presents itself to the Commission, however, as to the methods, if any, by which the great Governments might give to the commodity silver a stable value when coined into money. This question was debated at some length in the Brussels Monetary Conference, and it was deemed necessary by the delegates to take into consideration the output of the mines as well as the utilization of the product. So the question was bluntly put to the representatives of the silver-producing countries whether any means could be devised to limit the output. When a negative answer was returned, the project of regulating the purchase of the metal by international action was abandoned.

Ex-Secretary Gage has written a letter to the President of the Texas Bankers' Association, in response to an inquiry of the latter: "Is the money supply of the United States sufficient?" It is Mr. Gage's opinion that, although the money supply of the United States can be reinforced to any extent from the gold resources of the world, there is a deficiency in the credit currency. He shows that the supply of checks, drafts, and bills of exchange is limited only by the amount of business transacted, which creates its own medium of exchange for the larger transactions and leaves nothing to be desired; but for the smaller transactions, remote from banking facilities, there is a deficiency which should be supplied by the banks on the same principles as those governing the issue of banknotes in France, Germany, Scotland, Canada, and other civilized countries. Mr. Gage holds that the protection of the note holder against loss may be made entirely adequate without bond security lodged in the Treasury; that there need be no dangerous expansion under such a system; that such a currency would go far toward relieving the tension in monetary circles during the crop-moving season; that it would tend to steady the rates of interest for money, and that it would be in the interest especially of the agricultural classes, affording them an adequate supply of a safe circulating medium on terms more favorable than they can otherwise enjoy.

The National Business League, whose headquarters are at Chicago, have reopened their campaign for the reform of the consular service, and have begun to distribute copies of the Lodge bill, together with arguments for its passage. The bill contemplates a complete change in the system of selecting and promoting foreign consuls and their assistants. It abolishes Congressional patronage completely, and puts this branch of the public service under the merit system. It exacts as conditions of appointment a general knowledge of the trade conditions, resources, and requirements of this country, as well as of the country to which the appointee is accredited, and ability to speak either French, German, or Spanish, as well as good English. The aim of the measure is to make fitness for the particular duties of the office—that is, ability to promote the manufacturing and commercial interests of the United States—the sole test and standard of qualifications for appointment and promotion. The bill was voted down with derision in the last Congress, but it will "come up smiling" in the next one, and it will continue to come up till it is enacted into law. It has a much stronger supporting force than the Civil Service law had twenty years ago, consisting not only of "theorists," but of business men of both political parties, whose trade with foreign countries depends largely and increasingly on the intelligence and efficiency of the men holding positions in consular service. It is gratifying to perceive that these men are not in the least daunted by their defeat in their earliest battles with the spoils politicians.

President Roosevelt is very fond of dealing with the "hard fact." Ideals are all very well, but what is the use of dashing yourself against the reality? But what is the real and what the fanciful? For example, at the dedication of the naval monument in San Francisco on Thursday, Mr. Roosevelt said that the victory of Manila had "opened the Pacific Ocean to American commerce." This, therefore, is one of the official "facts as they are." But, unhappily, it is also one of the statistical facts as they are not. We will not burden our readers with the figures. They are in the Government tables. Suffice it to say that our Philippine exports are less than one-half of one per cent. of the total, and that they have not increased by anything like the amount of the new foreign trade which has come to us since 1898, and with which "the thunder of Dewey's guns"

had nothing whatever to do. If the President had been intent on the real commercial fact, as related to the acquisition and cost of the Philippines, he would have come to a conclusion nearer that of a cynical English economist, who, asked what was the chief lesson of the Boer war, replied, "The chief lesson is that war is an industry which does not pay."

Some one has said that, with the extension of modern means of communication, the whole American people are dancing at the end of wires, one ring from the centre setting all their nerves to jangling simultaneously from Broadway to the last dusty corner of the Western farming States. The fling finds its mark, if at all, in the quality of the nerves; certainly not in their close connection, for the welding together of the intelligence of the world has been the great achievement of the past fifty years. Perhaps our most remarkable development in this line during the past decade has been the rural delivery system. A recent press dispatch stating that the establishing of these postal routes must be discontinued till the next fiscal year for lack of funds, calls attention to the marvellous growth of this institution. Started in 1896, it has advanced in almost geometrical progression. There were 1,276 routes in 1900, 4,301 in 1901, and 8,466 in 1902. The report from Washington states that, within two years, at the present rate of increase, 38,000 routes, covering the whole country, will be in operation. As a civilizing agency—in the extension of trade, the promotion of reading (especially of current literature), the vivifying of the dead reaches of country existence—there have been few movements of recent years, certainly none under Government control, that have approached this.

The employer—when most a worm—will turn. That is the salutary lesson for organized labor taught by the events which crowd the news from day to day. In this city the employing builders have had to federate against federated unions, as a necessary measure of self-defence. There is a limit to the concessions which can be made; wages cannot indefinitely go up; hours cannot be cut down without end; owners have a few rights still; managers must be allowed some voice in the management. In other words, the trades unions have at last provoked, by their mounting arrogance of dictation, an assertion of common right and common manhood on the part of employers. Nothing but their desire to avoid friction, and their undoubted willingness to share, as they have shared, the profits of these prosperous years with their men, have prevented such a resolute stand from being taken long ago. It is a sharp and wholesome reminder. Wages and hours of labor remain, what they have always been, a matter for adjustment between workmen and employers, of give and take. But it was high time the unions were given plainly to understand that they cannot go on forever giving nothing and taking everything.

In Bridgeport, Conn., the question is whether the city shall be run by a "labor" Mayor or directly by the labor unions, without the intervention of superfluous officials. When the Mayor tried to quell a strikers' riot on Sunday, a blow on the head promptly reminded him that he should respect his betters. The dogma to which the Mayor of Bridgeport and all the rest of us must subscribe was promulgated in this city the same day by Delegate Fitzgerald of the Reliance Labor Club. The topic under discussion was whether to stand by the newly formed union of rockmen and excavators, which has struck in defiance of the Central Federated Union. Delegate Fitzgerald argued: "Right or wrong, this union ought to be supported. When a union is in its infancy it is right at all times." The glaring insufficiency of this statement was at once apparent to another delegate, deeply versed in the theory of implied doctrines. He leaped at once to the logical conclusion that unions are right not merely in their infancy, but always. It must be confessed, however, that the dogma of union infallibility, like that of papal infallibility, presents some difficulties. In this city we have the spectacle of the Central Federated Union and the Rockmen's and Excavators' Union squarely opposed to each other—and both right; and the United Brotherhood of Carpenters and Joiners and the Amalgamated Society of Carpenters and Joiners fighting each other to the death—and both right. This is an opportune moment for such a subtle casuist as Delegate Fitzgerald to write a 'Harmony and Exposition of the Labor Gospels.'

A couple of years ago a Republican State Convention in Pennsylvania devoted the larger part of its platform to denunciation of the press. This was the party's answer to an indictment for corruption, the truth of which it could not gainsay. Gov. Pennypacker's inaugural address echoed the sentiments expressed by the State Convention, in much better language, it is true, but with the same note of exasperation at public criticism of men in high official place. All this clearly foreshadowed the new libel law which the Governor has just signed. The spirit in which it was passed, and the temper of the Governor in signing it as expressed in a long, pompous, and fatuous memorandum, fully warrant the charge made by the leading newspapers of the State, that this is an attempt to gag the press in order that known corruptionists may ply their trade with less interruption. The bill provides that civil actions may be brought against newspapers for negligence "in the ascertainment of facts and in making publications affecting the character, reputation, or business of citizens"; and that, when such negligence is proved, compensatory damages may be recovered, together with punitive damages where the matter is libellous and has been given special prominence by means of cartoons or display type. The act also requires newspapers to print at the head of their editorial page the names of their owners, managing editors, etc., under a maximum penalty of $1,000.

Part of this is little more than codification of existing law, but the Governor, in his memorandum, goes much further. Describing the conditions which he thinks ought to be dealt with, he says: "Bishops, too, hurry into print without investigation, and with only such information as comes from muddy sources, to express their disregard for those whom the people have entrusted with authority." A Tammany executive, gifted with Gov. Pennypacker's power of expression, would doubtless have said as much when Bishop Potter sounded his note of alarm against corruption in this city two years ago. Describing a cartoon in which he himself is depicted as in danger of being overturned by a free press, the Governor declares: "In England, a century ago, the offender would have been drawn and quartered and his head stuck upon a pole without the gates." He does not say that he desires this now, but the idea is evidently no more offensive to him than the cartoon. The Philadelphia *Press*, which, despite its former anti-Quay sentiments, supported Gov. Pennypacker during his canvass and has regularly praised him since, describes the memorandum as "unspeakably shallow, silly, and wrongheaded." In its more serious light, his approval of the bill and his memorandum constitute one more attempt on his part to shield, by his abilities and reputation, men who are known to be the worst of public plunderers.

It could have been only a compelling sense of duty to the legal profession and to the public which led the Bar Association last week to adopt a resolution reflecting upon one of the most prominent judges in this city. His acceptance of a position in a private corporation while still on the bench, has been the subject of much disturbed comment among scrupulous lawyers. They have felt that his action, while violating no statute, did infringe upon that delicate sense of propriety which is never more admirable than when seen in a judge. The Bar Association now takes this view. It votes that such a mixing up of

judicial and money-making activities is "incompatible with that degree of dignity and independence of the judiciary which this Association is striving to promote." We might be even more emphatic. Quite aside from professional ethics, the need of absolutely incorruptible and absolutely unsuspected judges was never so great as now. They have to decide cases where not only immense money stakes, but wild social passions are involved. The vast issues affecting great corporations are by far the most important matters now coming before the courts. If their decisions are to be accepted as the awful voice of the law, and to be submitted to without questioning, the judges who render them must be known to be men stayed by no private interest. Otherwise, the strain upon our law-abiding tradition will be too severe, and the respect for an unbought judiciary—which is one of our few remaining bulwarks against sudden popular manias—will be swept away.

Gradually the ghastly details of the massacre of the Jews at Kishenev are finding their way into print. They recall the Bulgarian atrocities and the Armenian massacres by which alone their horrible items are paralleled. The offenders in this instance are nominally Christians of an old civilization, whose sole excuse for their inhuman atrocities is a difference in religion, combined with a racial prejudice. Well may the London *Jewish Chronicle* call upon Christian Europe to denounce this outrage. There is no pen so halting but that it should protest against such savagery, no voice so feeble but it should make an outcry. As far as the nations are concerned, no other action is possible than that of individuals and the press. It is no Bulgaria with which the world has to deal, and there is no Gladstone to make the world ring with his matchless indignation. As for ourselves, it may well be asked whether our hands, so recently bloodstained in the Philippines, and so constantly befouled by the lynchings of the South and West, will permit us to enter as strong a protest as should come from a land of liberty and of free speech. But it is gratifying to note that American charity is already coming to the relief of the survivors of this carnival of blood.

The persons who are urging Secretary Hay to file a protest with the Government of Russia against the barbarities practised on the Jews at Kishenev, should take notice of a debate in the Italian Chamber of Deputies on May 7, in reference to the lynching of two Italian citizens at Erwin, Miss., in July, 1901. The Under Secretary of Foreign Affairs, Signor Baccelli, was asked what had been the outcome of the representations made by Italy in reference to that affair. Signor Baccelli replied that, notwithstanding the energetic measures taken by the diplomatic and consular agents of Italy, no conviction of the guilty parties had been obtained. He said that the United States Congress had voted the sum of five thousand dollars for the next of kin of the victims, but that the Italian Government would not accept blood money as a satisfaction, although it could not prevent the relatives of the victims from receiving it. He added that the late President McKinley and President Roosevelt strongly condemned lynchings, and that bills had been introduced in Congress for the trial by the Federal courts of such offenders against foreigners, but that the bills had not been passed. In short, the matter stood just where it was in 1901, when the crimes were committed. Some statistical information was contributed, showing that, besides Europeans, about 150 American citizens are lynched every year. This fact might be taken as presumptive evidence that we are not moved by prejudice against foreigners, and that we mete out equal injustice to all, but Signor Baccelli did not dwell upon that feature of the case. He hoped that the American nation would realize that lynching is a custom which is not a credit to an advanced stage of civilization, such as the United States has reached, and that this country would mend its ways.

The opinion of the Marquis of Granby concerning certain English statesmen who would repeal the English bread tax, was expressed in terms which bring to the minds of the older generation the spicy literature of the anti-Corn Law campaign. The Marquis telegraphed to the Leicestershire Chamber of Agriculture, saying: "I should wish meeting to know my strong disappointment at abolition of corn tax, which abolition, if only on ground that tax enlarged basis of taxation, seems to me to approach criminal idiocy." The Marquis, it should be added, was for several years private secretary to Lord Salisbury, whose party is still in power. Mr. Balfour is at present the reigning "criminal idiot." On Friday he received a large deputation of the agricultural interest who came to protest against a repeal of the tax on imported corn, but he declined to entertain their proposal, saying that the tax was never intended to be a protective measure, and that the Government could not make it such by mere silence and non-action. If protection was to be restored as a British policy, it must be done in a broad and open way after debate, and not in a clandestine manner.

Emperor William has once more placed himself upon the side of the military reactionaries within his dominions by accepting the resignation from the army of his brother-in-law, the hereditary Prince of Saxe-Meiningen. The Prince's offence consisted in publishing a remarkably humane order to his army corps, encouraging the private soldier to report ill-treatment on the part of officers, as of non-commissioned officers, guilty of cruelty; and stating that it was not the Emperor's wish that men should suffer in silence. This his Majesty now disavows, bowing before the god Discipline, who might, he thinks, be offended by such a procedure on the part of the men in the ranks. Needless to say, this will be as serious a blow at those who would reform the evils of Prussian militarism as is the Emperor's encouragement of duelling. That there is a terrible amount of persecution in the army admits of no dispute. The powers of an officer are almost absolute. To complain is to subject one's self to insult and additional punishment. In most cases, moreover, brutal non-commissioned officers are upheld by their commissioned superiors—always for the sake of discipline. Because of his wife's eccentricities, the Prince of Saxe-Meiningen has not been in favor at court or with the people. But his retirement and his evident desire to right the wrongs of the oppressed soldiers are certain to give him a novel and, it is to be hoped, lasting popularity.

In 1893 Germany reduced the term of military service for the infantry from three to two years, and the same reduction has been recently made by France and is now contemplated by Austria. Even the German Emperor, with all his love of military pomp and power, admits that the change has not diminished the efficiency of the army in the slightest degree. In fact, the discipline of the soldiers has been thereby greatly improved, the percentage of punishments for insubordination in the infantry having decreased during the last ten years nearly one-half (nine to five), whereas in the cavalry and mounted artillery, who continue to serve three years, there is no perceptible improvement in this respect. Most remarkable, however, is the impulse which the adoption of the two years' military service has given to the development of German industrialism. It is now generally conceded that under the three years' system Germany would never have attained her present prominent position as a manufacturing and commercial nation. It is the recognition of this fact which has led other European Powers to introduce the same reform. The experiment was at first regarded by conservative military authorities as extremely hazardous, and for this reason was to be tried for ten years, *i. e.*, till March 31, 1904; but it has been so successful in every respect that there is now no thought of returning to the old system, but rather a desire to apply the two years' term of service to the entire army.

PROGRESS OF CIVIL-SERVICE REFORM.

Notwithstanding the postal scandals and other discouragements, the tone of the annual meeting of the New York Civil-Service Reform Association, held last week, was distinctly one of hope and good cheer. Primarily, this was due to conditions in the Federal service. But in its annual review of the progress of the cause, the Association was able to report changes for the better in this State and this city. Six months ago the local situation was very discouraging. Although waited upon by a committee of the Association, to which he promised certain changes in the Municipal Civil-Service Commission, Mayor Low continued in office the seven Commissioners under whose management there had arisen endless delays and embarrassments, hampering the entire reform Administration. This year the Association reports that the work of the local Commission has shown a marked improvement, although little of a constructive character has been accomplished. To have such heads of departments as Dr. Lederle and Gen. Greene on hand to testify to their approval of the principles of the Association was also a gratifying sign of the times.

As far as the State is concerned, the Association found occasion for both praise and blame. Gov. Odell it thinks open to criticism for having signed certain bills of a year ago, and for having too frequently secured the approval of the State Commission in exempting offices from competitive examinations. It must be remembered, however, that many of the exemptions since Gov. Odell's first election have been due to decisions by the courts. If we are correctly informed, he himself is of the opinion that, this considered, his Administration compares very favorably with previous ones in the matter of exemptions. In other respects, the Association states, Gov. Odell has strictly upheld the law, and has shown a readiness to veto bills injurious to the merit system.

But it is in the Federal service that advocates of the merit system the country over find the greatest cause for encouragement, thanks largely to President Roosevelt. Since this graduate of the Civil Service Commission took the Presidential chair, the entire tone of the service itself has been wonderfully improved, until the contrast with its status under the preceding Administration is striking. One of the signs of this is the changed attitude of Congress. For perhaps the first time, the voting of the Civil Service Commission's appropriation was unaccompanied by any of the time-honored attacks upon the "snivel service," in which the Grosvenors have so long delighted. Moreover, Congress doubled the Commission's appropriation, thereby making possible the employment of the clerks it needs, and whom it has hitherto had to borrow from several departments.

Coming to the details of President Roosevelt's work for the civil service, in reorganizing the Commission he has thus far appointed two pronounced advocates of the merit system, Messrs. Foulke and Garfield. The result has been to obtain what is probably the most satisfactory Commission that has thus far held office. He early served notice that the law must be respected and obeyed, by removing prominent officials who had violated it, by accepting forced resignations from some and by declining to reappoint still others. Among these may be mentioned the Surveyor-General of Colorado, the Collectors at El Paso and Louisville, and the Postmaster in Philadelphia. Early in his term President Roosevelt included within the rules 11,800 rural free-delivery postal employees, and 1,800 field employees of the War Department who were excluded by the order of May, 1899. He has established a registration system for the selection of laborers in the Washington departments, and has more recently extended this to the larger outside offices. Moreover, Mr. Roosevelt defeated the plan to foist upon the permanent civil service the great body of temporarily appointed census clerks, and brought about the establishment by Congress of a permanent classified Census Bureau on the same footing as other departments of the Government. The President has also insisted "that not an office should be filled in the Philippines or Porto Rico with any regard to the man's partisan affiliation or service, with any regard to the political, social, or personal influence which he may have at his command."

But this is not all. Soon after taking office, Mr. Roosevelt approved amendments to the rules which restored some of the safeguards removed by President McKinley on May 1, 1899, and only two months ago signed a complete revision of the rules which will establish a general system far in advance of the old one. It does away with the many objectionable features of Mr. McKinley's amendments, and restores many offices to the competitive class. This in itself constitutes one of the greatest steps forward in the history of the movement. Fortunately for the country, Mr. Roosevelt's pledge to follow his predecessor's policy plainly did not include the civil service. In the consular and diplomatic services Mr. Roosevelt has also done well, on the whole, and has readily promoted or transferred to better positions men who have been faithful in less important offices.

It must not be overlooked that, in spite of this and his emphasis upon the merit system in many public utterances, the President has been weak enough to make some very bad appointments. Of these we shall mention merely Byrne of Delaware as Federal District Attorney and "Joe" Murray, Mr. Roosevelt's old "ward heeler" in Assembly days, fastened upon the local Immigration Bureau. The Association also denounced afresh the appointment of James S. Clarkson, and made serious charges against him of absence from his office and of bad selections of subordinates.

COMMISSIONER IDE ON THE PHILIPPINES.

The most interesting statement as to the methods and aims of the Philippine Commission which has appeared since Gov. Taft testified at the time of Senator Lodge's mock inquiry into the affairs of the islands, was made last week by Judge Ide of the Philippine Commission, in an interview published in the *Evening Post*. That the Commissioner should be extremely optimistic was, of course, to be expected. He speaks warmly of the growth of the educational work undertaken in the islands, disregarding President Schurman's scathing criticism of the attempt to force a foreign language upon an alien people. He is able, moreover, to report that the hunting down of ladrones has gone on swimmingly since the duty of ferreting them out has been transferred from the American troops to the Philippine scouts and constabulary. The experiment of setting one race of Filipinos—the native troops are nearly all Maccabebes—against another seems, therefore, to be successful. Judge Ide, moreover, prides himself upon the establishment of courts, comparing "favorably in their general character with those of any State in this Union," and thinks this the greatest achievement of the American Government. He makes the usual plea for the postponement of any action looking to the freeing of the slaves under our flag, or to the stamping out of polygamy among our Mohammedan subjects, although he admits that it is desirable to end slavery as soon as possible. And he is able to state in an interesting way the relative unimportance of the Moro questions as compared with those which concern the Christian Filipino. Upon the financial needs of the people, their sufferings because of the war, the prostration of their agriculture and commerce, the interview barely touches, save to plead for an amelioration of the injustice which compels Philippine products to pay 75 per cent. of the Dingley tariff rates. Best of all, Judge Ide believes in "developing the Filipino rather than the Philippine Islands," and praises the Government employment of many Filipinos in pursuance of this policy.

The striking feature of the interview is, after all, the tribute paid throughout to the character of the Filipino people. They have, Judge Ide says, no fondness

for manual labor, but they are ambitious to enter every trade or profession of the higher grade. They are extraordinarily temperate, far more so than our own people, and have, fortunately enough, not imitated our whiskey-drinking habits. They respect and approve of our American women, while not understanding our social conventions. The individual Filipino makes an excellent citizen, being peaceful, law-abiding, mindful of his own affairs, and considerate of others. The former members of Aguinaldo's Cabinet who now hold office are giving valuable aid. Such success as the Commission has obtained is more probably attributable, Judge Ide thinks, to the policy of utilizing natives than to any other cause. Aglipay, the leader of the new Filipino Church, is reported to be astute and bright, with very considerable executive ability. Finally, Aguinaldo's preëminence is largely due to his remarkable organizing faculty. For a race that has been condemned, by men like Gen. Chaffee, to Anglo-Saxon tutelage for hundreds of years, and which has variously been denounced as barbaric and savage, this is certainly a very remarkable showing.

When Commissioner Ide turns to the future and the question of independence, he declares the time not ripe for such discussions, believing that mere agitation will lead to the formation of "unlawful" conspiracies to encompass that end. But this seems to us not inconsistent with the view that the love of liberty and the desire for nationality are so strong that the mere mention of the subject is likely to inflame the minds of the thoughtful Filipinos, much as Patrick Henry's words fell upon fertile soil throughout the colonies. Judge Ide's counsel of silence and delay we think the counsel of cowardice and compromise. Whatever the effect upon the Filipinos, the United States cannot afford to be in a doubtful attitude about this matter. It owes it to itself and to every ideal and tradition it possesses to announce to all the world its intention to help the Filipinos to a national existence as it has helped Cuba to independence.

The time has come for the nation to search its heart on this question. Are the Filipinos to be mere vassals and subjects, or citizens of the republic, or citizens of their own republic? Are we exploiting the islands for our own profit, or for the benefit of its rightful owners? If the former, it must not be forgotten that, as John Stuart Mill put it, to found a great empire for the sole purpose of raising up a people of consumers, is a project fit not for a nation of shopkeepers, but for a nation whose government is influenced by shopkeepers. To deny the Filipinos light as to their future status now is to repeat the folly of 1898, when Aguinaldo and his officials had no information as to our intentions until the announcement of the Treaty of Paris. Frankness now, with the promise of independence, might act, whatever Judge Ide may say, as a stimulus to good behavior and rapid progress in the art of self-government. When the instinct of nationality is so powerful, it is idle to suppose that partial freedom will seem anything else to the Filipino than the "privilege and prerogative and not liberty" which Burke termed it in one of his appeals for the American colonies.

Commissioner Ide's interview is also unusual in that it is free from any notes of vulgar spoliation or exploitation such as have been heard so often in the debates at Washington. He takes strong ground in defence of the Filipinos against the Chinese. But the very watchword of the "Philippines for the Filipinos," which is in his mind in discussing this question, is what we need to apply ourselves, and, Judge Ide to the contrary, we cannot but believe that the word which the Filipinos should hear oftenest from American lips is independence. There are some words which, spoken in connection with the lives of peoples, have an irresistibly tonic and stimulating effect, and have done more to advance civilization than all the exchanges of the mart. History has yet to record an instance where the spirit of liberty, with a free discussion of its attainment, has done aught but ennoble the people who breathed it.

ABANDONING PROHIBITION.

In New Hampshire's enactment of a local-option license law (under which elections occurred on May 12), following so closely on that of Vermont, may be seen the concluding confession of the error and failure of State prohibition, as a means of dealing with the liquor problem. Of the seventeen States that adopted the idea when it was new and attractive, all but three have now abandoned it. They are Maine, Kansas, and North Dakota, in each of which it is by tacit consent treated as a farce; and the spasm of enforcement just now seen in Maine will have for its probable result, if not its purpose, the repeal of the law.

Next to Maine, Vermont has made the longest trial of prohibition, enacting it just fifty years before the late repeal. New Hampshire enacted it with regard to distilled liquors in 1855, and extended it to beer in 1878. Maine was two years earlier than Vermont, leading off with the experiment in 1851, whence the agitation spread to every State of the North, and left its record on the statute-books of most of them. It was the result of the great moral upheaval of the second quarter of the last century against intemperance, and of the general sweep of "isms" humanitarian which so characterized that era. That it has had its place of usefulness, educational and disciplinary, in our social evolution, is not to be denied. To realize this we have only to compare present conditions of sobriety with those of three generations ago, when liquor drinking was almost universal, and when, according to a report of a citizens' committee in New York in 1817, one inhabitant in eight in this city was living on charity, while of this pauperism seven-eighths was due to intemperance. In the same year a report of the Mayor showed 2,500 grog-shops in a population of about 115,000, or above one to each fifty people.

Prohibition was the first crude effort of an aroused morality to deal with a most difficult and complex problem, but it has now been replaced almost everywhere by local option, constantly growing more carefully restrictive and stringent in supervision, aiming, wherever practicable, to draw the line between that part of the traffic which public safety requires to be prohibited, and that other part which, if evil at all, is too remotely and indirectly so to warrant an interference with individual rights. The fundamental error of State prohibition has been that, for the sake of getting rid of a part, it has sought to sweep away the whole, and yet in so inconsistent a way, by forbidding the sale while admitting the right to purchase liquor, that failure was inevitable under the moral law. In all the history of mankind the only prohibition that has ever come within sight of success is that of Mohammed and Buddhism, which applies to buying and selling alike. "Thou shalt not buy or sell, give or receive any intoxicating drink," is the fifth commandment of the Buddhist Decalogue.

The local-option legislation of the different States is of all degrees of merit, but, generally speaking, it shows a steady and hopeful progress towards a practicable basis. The new Vermont law may fairly be said to reach high-water mark, thus far, in this respect. It goes further in the direction of home rule and home responsibility than has ever been done before. All license fees go, one-half to the local treasury and one-half to the construction of permanent highways throughout the State. More important still, so do all penalties for violation of the law. These are very heavy — from one hundred dollars to three hundred dollars for each offence. Thus a motive, and a powerful one in rural communities, is afforded to every taxpayer to see that the law is obeyed—not only that there shall be no unlicensed selling, but that there shall be no violation of the restrictions of the law. Then, to make the motive operative for good, every policeman, sheriff, and constable must "report forthwith," under penalty of $200 fine, to the License Board—which has charge of the business in each town and city—"any violation brought to his attention." Moreover, he must periodically appear

before the Board, and on oath, under the full penalties of perjury, state in detail "whether he has observed any indications or received any information tending to show" any violations. The License Board must then, under penalty of $500, follow up such information, investigate, and prosecute every complaint, if well founded, and if not, report at the annual meeting the reasons for non-action in every case. The Madisonian recipe for law-making, "to mark with precision the duty to be done and to diminish the discretion that is liable to be abused," seems here to be well followed.

Every licensee is placed under three thousand-dollar bonds, not from surety companies, but from two townsmen whose liability extends to any action for civil damage; and to further guard against ownership of the retail traffic by breweries or distilleries, it is provided that no person "directly or indirectly engaged in the liquor traffic" shall be accepted on any bond, nor shall one person be accepted on more than one bond.

With all these and other safeguards to prevent any but reputable men getting licenses—especially necessary in a State where the long reign of prohibition has tended to drive the traffic to men of the blackleg class—there is a further limitation of the number of licenses by population. They are one for each thousand, which is only sufficient for the hotels and bona-fide restaurants and an occasional drug store for trade in bottled goods, not leaving room for a dozen mere saloons in the whole State. For towns that vote "no license," there is provision for a purely medicinal drug-store license, to sell only on a physician's prescription, with restrictions somewhat like those of the Kansas law, but far more effective and assured of proof in case of violation. For this, the penalty is business ruin for the offending druggist.

These are only a few of the interesting and instructive features of the new Vermont law. In Massachusetts, whose law has hitherto been recognized as the best-devised and best-guarded of the local-option statutes, all available data indicate an average improvement of 25 to 33 per cent. as compared with State prohibition. But the Vermont law represents such an advance over that of Massachusetts that we may expect the rum evil to be reduced by a full half from what it has been under nominal "prohibition."

ENGLISH PARTY PROSPECTS.

Mr. Chamberlain's speech at Birmingham, if not a direct contradiction of Mr. Balfour's, is an evident bid for the Premiership based upon a change of British policy in reference to free trade. Although Mr. Balfour had not denied that some changes might be advisable, he indicated the purpose of the Government to proceed with deliberation and not to run ahead of public opinion. Now his Colonial Secretary clears the fence at one bound, assuming evidently that he is the real leader, and that the party will follow him. For this exploit he chooses a time when the Balfour Ministry is weakened by serious defections, and when Mr. Balfour himself shows signs of weariness. Mr. Chamberlain's speech may prove captivating to the masses who do not see very far below the surface. He deals in stock phrases. He talks of binding the empire together and repelling foreign dictation and "cultivating the trade of our own people," but he does not descend to details. A year or more ago, Sir Robert Giffen invited attention to the details of the proposed new policy in reference to colonial trade, and riddled it so completely that nobody has even attempted to answer him. Sir Robert's summing up was, in substance, that the preferential policy was a scheme to throw away, or put in jeopardy, three hundred millions of trade in order to win thirty millions.

The political sensation caused by Mr Chamberlain's speech on Friday is largely due to the fact that it was so timed as to hit a political crisis—or something very like one. That Mr. Balfour's Government has been on the down grade for some months is beyond question. The Conservatives themselves admit it. The evidence lies not alone in the bye-elections. These have been, however, extremely significant of the swing of the pendulum away from the Conservatives. In twelve constituencies where, in 1900, they had a total majority of 20,002 votes, in the bye-elections they have been left in a minority of 3,496. Obviously, that ratio of loss in a general election would sink the party.

Even plainer signs of the waning fortunes of the Ministry have not been lacking. There are such things as the indefinable prestige of a Cabinet and the unwritten authority of the Prime Minister, both of which have been seriously undermined during recent weeks. Mr. Balfour is not a masterful man. He has marked personal charm and an intellect at once subtle and powerful. Everybody likes him, but nobody is ready to follow him through thick and thin. His very lucidity and detachment of mind seem to unfit him for the position of party leader. He has not those rough-and-ready methods, those hot and surging convictions (or the appearance of them), which are demanded in the chief of a great political organization. Had Mr. Balfour been an imperious man like Gladstone, or a strongly haughty one like Lord Salisbury, he would never have tolerated those party revolts and that occasional insubordination of even a colleague, which the present Prime Minister has meekly suffered. The formation of a vigorous and daring Fourth Party within the Conservative ranks; the several unhappy instances of vacillation or misjudgment in foreign affairs, which can be laid to the charge of the Government; the hostile electoral tide running against the Ministry in the bye-elections—all have combined to shake Mr. Balfour's position rudely. Now comes Mr. Chamberlain's speech.

In effect, it raises a standard of disaffection. Nothing is more likely, to be sure, than that statements or letters will presently appear showing how completely in harmony are Mr. Balfour and his formidable colleague. Chamberlain is an adept in disavowing popular impressions of his speeches or activities. But the fact remains that he has skilfully chosen his occasion to convince the country that he is the one strong man in the Cabinet who knows his own mind and never hesitates. Almost at the moment when the Prime Minister was delicately balancing the pros and cons of protective taxes, the Colonial Secretary was boldly striking out for himself and his party a new policy, shrewdly designed to take advantage of Conservative discontents, and, at the same time, to fall in with the popular tendency to do and sacrifice everything for great Imperial interests. The average sense of England will arrive at the conclusion, no matter what Mr. Chamberlain's disclaimers may be, that he has offered himself as the real man with the real policy for the hour.

Mr. Balfour will not be the first Premier to suffer from having too powerful a subordinate. If a Cabinet is not to be made up wholly of what have been called "ornamental phantoms," this danger must always exist. Palmerston and Gladstone were never comfortable Cabinet-mates. The latter said that he seldom went to a Cabinet meeting without taking the precaution to carry his resignation in his pocket. On the other hand, Palmerston declared that he had a whole drawerful of Gladstone's resignations, which had been either refused or recalled. But Mr. Balfour is too winning and hesitant a personality to assert himselm as "Old Pam" did. His health is not robust enough, and his taste is too fastidious, for the arduous labors of his office. Nature seems to have designed him for the House of Lords. Exchanging persiflage there with Lord Rosebery would seem to be a more congenial rôle for him than to be having to deal with the sappers and miners in his own Cabinet. At any rate, more and more people in England will now expect him, sooner or later, to make for that harbor of refuge, leaving the leadership of the Conservative party to that whilom Radical, Joseph Chamberlain.

That the latter is an exceedingly adroit and ready man, dowered with great political courage, too, or the plausible semblance of it, no fair-minded student of his career can deny. But his course has justified, in many respects, Mr. Gladstone's early characterization of him as the nearest approach to an American politician yet produced by English

public life. What he meant was doubtless that keen instinct for the feelings and desires of a democracy, with a capacity for evolving large and showy programmes, which Mr. Chamberlain has so often displayed. For a man of his type, it matters little that his plans fail when the pinch of legislation comes. He always has another just as good. Mr. Chamberlain's scheme of Old Age Pensions came to nothing; his Colonial Conference was a practical failure; and there is no sound reason for believing that his project of an all-British preferential trade can be enacted into law. But that is not necessary for his purposes. He has appealed to the national imagination in a very striking way. He has caught the fancy of the hour. The result will be, almost certainly, to make him chief of the Conservative party. That, as such, or even as Prime Minister of England, he will succeed in reversing the historical fiscal policy of England, we do not believe. The facts, the laws of trade, will be too strong even for his alert and flexible understanding and wonderful political skill.

THE RIGHTS OF DIALECTS.

There is a suggestion of pathetic irony in the publication of a project for the official sanctioning and preserving of local dialects in France, at the very time when the converging forces of centralization in that country seem to be culminating in a supreme effort. In a pamphlet entitled 'Pétition pour les Langues Provinciales,' which revives pretensions originally advanced in 1870 but silenced by the outbreak of the Franco-German war, Prof. Henri Gaidoz contends that such dialects, while forming as it were a centre of accretion for provincial or cantonal sentiment, are nevertheless compatible with homogeneity of national life; administrative endeavors towards unification of speech may consequently be regarded as infringements on natural rights, entailing at the same time irreparable loss of material for students of popular literature, folklore, and philology. The plea is therefore urged that in such a region as Brittany, where a population of more than thirteen hundred thousand cling tenaciously to their ancient Celtic tongue, the use of Breton, if only as a vehicle of explanation, becomes all but imperative in primary schools frequented by children totally ignorant of French; and like conditions apply equally well in Provence and elsewhere. To institutions of higher learning should be entrusted the function of cultivating such rich stores of literature and philology through the work of special chairs.

It is the fatal defect of compressed argumentation of this character that all its question-begging is at once laid bare. The plausibility of Professor Gaidoz's pleadings rests in acceptance of his disputable postulates, and in prudent waiving of the very points that give vitality to such discussion in any country where difference in speech involves differences of religious and political views. To treat these as negligible *questions de clocher* is to simplify the problem into blank unreality. The very cases cited in support of the central position differ so fundamentally from Brittany (for which the whole pamphlet is an undisguised contention, and naturally, as proceeding from the chair of Celtic philology), that no valid analogy exists in the appeal. Toleration, in the British Isles, of Celtic or other local dialects nowhere involves their recognition in any broad official sense. The use of them is a private family luxury similar to convenient bilingualism in the educated. In Switzerland, the existence, side by side and in refreshing amity, of French, German, and Italian depends on that historic tradition of cantonal self-government which only long experience has fused into harmony with the idea of a fully developed and coherent national life. The one instance, conspicuously unnoticed by the pleader, of the natural linguistic divisions in Italy offering some resemblance to France, stands out in strong opposition, since the unification of young Italy derives a generous share of its strength from the fact that, between the Alps and the southern coast of Sicily, the "Illustrious Vulgar Tongue" is to-day at least generally understood, even in remote hamlets, and that chiefly through the work of the newspaper and the common school. That Spain has granted to her Basque provinces the use of their own strange idiom as a political language, and that the Catalan dialect may yet be heard in the *Ayuntamiento* of Barcelona, are among the most patent signs of the truth contained in the popular Iberian saying which makes of every Spaniard a political faction in himself. The particularism of the various components of the Austrian Empire, largely the result of mutual unintelligibility, is too familiar to be dwelt on. If Professor Gaidoz had chosen to glance across the Atlantic at our immediate neighbors to the north, he would have discovered that resolute and systematic preservation of a distinct speech in a distinct province has formed one, at least, of the most constant obstacles to the development of the organic national idea which the Fathers of Confederation had in view.

It would, however, be both arbitrary and dogmatic to insist that a difference of language is alone sufficient to sunder a truly united people, or to stay a healthy growth. The case of Switzerland, already mentioned, discloses the strange phenomenon of an *entente* in certain vital respects more completely cordial between cantons divided by speech but one in faith, than between cantons using the same tongue and following different creeds; for the trifling inconvenience of an occasional failure to understand is no such ground of division as a radical impossibility of agreement over questions that touch all the profounder relations of the individual to the State, and of both to the Church. Belgian unity of national feeling, here described in the phrase "une vraie nation de frères," is for the most part undisturbed by active religious dissent; and yet the linguistic areas of French, Flemish, and Walloon remain virtually unaltered. The unfortunate element in the pleading of Professor Gaidoz consists in its urging the claims for recognition of a local dialect associated for more than a century with conditions unacceptable to the general spirit of modern France; it is needless to insist on facts of history here so obviously blinked.

RUSSIAN RIGHTS IN MANTCHURIA.

OBERLIN, May 11, 1903.

The prevailing comments upon Russia's movements in Mantchuria seem largely to be based upon a misunderstanding of the facts. In the first place, the unmeasured condemnation of Russian action fails to take into account the difference in the relations between China and Russia and those with other European Powers. For three hundred years Russia has had to live next-door neighbor to China. Along a border of three thousand miles she has been compelled to keep peace with China, and to prevent her citizens from infringing on Chinese rights; whereas the other European Powers are simply interlopers, forcing themselves upon China from the outside by reason of their maritime supremacy. The whole attitude of European Powers toward China is one of supreme selfishness. None of them can claim disinterested motives for what they are doing. Nothing worse than this can be said of the motives actuating the Russian Government. But the proximity of the two countries to each other lays upon Russia special responsibilities, and subjects her to various exigencies different from any that can arise with the other European Governments in their relations to China. It is important, therefore, in this connection, briefly to review Russia's relations to China.

During the seventeenth century there was a long contest between Russia and China for the possession of the valley of the Amur. In many respects this was much like that between the French and the English for the valley of the Mississippi. This contest ended in the Treaty of Nertchinsk, in 1689, in which the Russians yielded their claims, and left China in full possession of the Amur Valley. Notwithstanding the great inconvenience to Russian interests, Russia continued to observe this treaty with remarkable fidelity for one hundred and seventy-five years. Meanwhile, overland trade with China, in proportions that are scarcely realized by the outside world, was continually kept up over the caravan route from Kalgan to Kiakhta, and over the more western route from Su-chau to Semipalatinsk.

Upon the breaking out of the Crimean

war in 1854, it became evident that all the Russian interests on the Pacific Coast were in jeopardy. It was impossible to get reinforcements into that field without the use of the Amur River, and the exigency was such that Muravieff, who was the Governor of East Siberia, obtained permission from the central Government to deal directly with China. This he did, first asking permission to go down the Amur River with the troops that he had raised in Transbaikalia, and then going down before there was time for the answer to be obtained. But there was no interference with Chinese rights. There was, however, the discovery that the Chinese were doing nothing for the development of the country, and that there were no Chinese upon the north side of the river and very few upon the south.

The next year there was the same necessity for sending fresh reinforcements down the river. This time, to secure safety, Muravieff established various Cossack colonies upon the north side to facilitate his return. The results are well known. Russia was entirely successful. The allies were ignominiously defeated upon the Pacific Coast, while the discovery of the unsettled condition of the country north of the Amur River led to a proposition from Muravieff that all that territory, together with that east of Ussuri down to the present site of Vladivostok, be ceded to Russia. One ground upon which this proposition was pressed was that, in the Treaty of Nertchinsk, the commissioners had been overawed by the presence of Chinese troops, while, as already said, the existing condition of things showed that China had no real interest in the country, so that the Russians were entitled to it by the "right of discovery" about as much as civilized countries are to their colonial possessions in general. At any rate, without bloodshed and without serious opposition, by the Treaty of Aigun, in 1858, this whole region was ceded to Russia; but the right of navigating the river was secured to Russia and China alone.

No sooner did Russia come into possession of this territory than a vast tide of immigration of Russian peasants began to set in, so that now there is in the region about half a million of Russian settlers with all the appliances of Western civilization. In the city of Blagovestchensk one will find a creditable museum, well-equipped hospitals, ample churches, and literary and musical societies comparing favorably with those in any city in the United States of less than 100,000 inhabitants. Just before I was there in the summer of 1900, a local society had rendered with great success Saint-Saëns's "Samson and Delilah."

In general it may be said that the Russians have been scrupulous in their regard for Chinese rights, and that they have in almost every way manifested an extreme desire to keep on good terms with the Chinese. For example, though by this treaty they had the right to navigate the Sungari River, penetrating Mantchuria, they never exercised the right, because of the popular opposition to it. It is well to remark, also, that the statement frequently made that Russia never withdraws her foot from territory which she has once occupied is shown to be incorrect, not only by the long withdrawal from the Amur after the Treaty of Nertchinsk, but by two other events which occurred during the latter part of the last century. One of these was her withdrawing from America on the sale of Alaska to the United States. The other instance occurred in her relations to China connected with the Russian occupation of western Turkestan. In 1871 Kuldja, one of the most flourishing Chinese provinces south of Lake Balkash, was occupied by the Russians for the purpose of putting an end to the pandemonium that existed on her borders, which the Chinese were unable to suppress. But, desiring to keep on friendly terms with China, Russia assured her, as she is now doing with reference to Mantchuria, that the province would be restored as soon as the Chinese were able to take bona-fide possession of it and maintain order. After ten years, on the fulfilment of these conditions, the province was restored and Russian troops were permanently withdrawn.

Russia's present rights and duties in Mantchuria cannot be understood independently of the history of the past eight years. However much Japan may have been wronged in the matter, Russia came into the possession of Port Arthur by the consent of the other European Powers, when the Germans had no scruples in seizing Kiao-chau on the Shantung Peninsula, and the English Wei-hai-wei. Then, under the provisions of the Treaty of Peking, in 1895, came the permission to build the Chinese Eastern Railroad, securing a direct line from Transbaikalia to Vladivostok and a branch line from Harbin southward via Newchwang to Port Arthur. This treaty was obtained by as legitimate a method as that by which we have obtained the right to that providing for the Panama Canal. According to the provisions of the treaty, and in view of rights in the road granted to the Chinese Government, the Chinese pledged themselves to furnish one-half the military protection. With these encouragements, a company under the patronage of the Russian Government, which guaranteed their bonds, undertook the building of the road, and pushed the work along with such phenomenal rapidity that, by the close of 1900, it would have been opened for traffic but for the interruption of the Boxer revolution. Hundreds of millions of rubles had been spent upon the enterprise, and everything was moving along without friction, and without serious protest from other Governments. The Russians had implicit confidence in the good faith of the Chinese to carry out the provisions of the Treaty of Peking. The lives of the great numbers of the engineers and their families engaged in the construction of the road, and all the vast property which had been created along the line, were completely at the mercy of the Chinese. Small squads of Cossacks alternating with similar bodies of Chinese soldiers supplied all the military protection that was afforded for the road when it was approaching completion in the summer of 1900. The city of Blagovestchensk upon the Amur was completely denuded of its Russian guard—the whole body with their artillery and ammunition having been sent forward to the centre of the disturbance about Peking.

Then came the revolution which changed the entire condition of things. Without a moment's warning, the Chinese by imperial order turned against the Russians, did their utmost to kill all the foreigners along the line of the railroad, and destroyed everything upon which they could lay their hands. They began at once and without warning to fire from the Chinese side upon the steamers plying upon the Amur River. They crossed the river and captured and destroyed such Russian villages as they were able to do; and began a formidable bombardment of the defenceless city of Blagovestchensk. On my way up the Amur River to this city, where we arrived two days after the siege began, two gayly dressed mandarins boarded our steamer, where they were put under arrest and their baggage was searched. They were found to be loaded with proclamations from the central Government for an uprising to destroy all foreigners, and were provided with plans for the capture of the city.

I wish to repeat here what I have said before, but what has failed to make the impression it ought to make, that the seeming atrocities connected with the driving out of the Chinese from the north side of the river, and especially from Blagovestchensk, immediately following these events, are to be attributed to the casualties of war that could not be provided against. The Russians had no troops in the locality for the regular protection of their interests. What was done was from the impulse of the moment, under the stress of a terror such as befalls a frontier settlement when savages suddenly break loose upon them. If they had had troops in Blagovestchensk they could have proceeded in a more regular way; but, being without troops, self-protection demanded that the Chinese, who had so suddenly transformed themselves into enemies, should all be driven over on to the other side of the river. I will not again go into particulars, but will simply reiterate that the Russians made a bona-fide attempt to give the Chinese safe passage from Blagovestchensk to the other side. The correct statements of these facts you will find, not only in my letter in your columns for September 27, 1900, but in the London *Illustrated News* for September 1, 1900, from the pen of Capt. Smith-Dorrien, a distinguished English commander, who was with me through all those harrowing events.

In this condition of things it follows, as a matter of course, that Russia must send troops into Mantchuria to reclaim the railroad and carry out for herself the provisions of the treaty for securing its protection. From that time to this the preservation of order has demanded their presence. Nor can they be withdrawn with safety until China has shown herself able to preserve order and gives ample assurance for the future. The revolution of 1900 has changed the conditions, so that it may not be possible ever to get back to the former status and protect all the interests that have arisen under the operations of the treaty.

Russia's interest in the region, therefore, differs from those of all other European Powers. Japan, by reason of her contiguity, has most reason to feel aggrieved by the Russian occupation. Under the pressure of political necessity, it will not be surprising if she speedily resorts to desperate measures to regain the position which was lost when she was forced to cede Port Arthur to Russia. But the Russian position is already impregnable, and in the long run her interests are not likely to

be antagonistic to the just rights of other European Powers or of America—if, indeed, the various demands made upon China by the civilized nations can be called rights.

So far as the matter of trade is concerned, I may illustrate by my own experience. When we went out on the construction train from Port Arthur, we were drawn by a Baldwin locomotive running over rails which were made in Baltimore laid on ties shipped from Oregon. At Harbin we counted the names of fifteen American manufacturing firms that had supplied material to the railroad shops. Within a few weeks I have had a letter from one of the most prominent Russian engineers, whose hospitality I shared, saying that since the railroad was completed he had remained to build a steam grist mill, and that he desired to be put in communication with an American firm that could supply him with the needed machinery. Going farther west, at Verkhni Udinsk I met twenty-eight carloads of American machinery being transferred to boats to be taken farther into the interior. In Tashkent I found one of the largest stores devoted entirely to the sale of American machinery; while going up the Irtysh River I saw a team of camels walking briskly along with an American mowing machine behind them. The extension of Western civilization into the unsettled portions of Mantchuria (which constitute two-thirds of the country) would create demands for commerce from which only our own folly or shortsightedness can debar us of our share.

Looking at the whole subject from the broad interests of humanity, one can not well wish to debar the vast Russian population which is filling up eastern Siberia from a readier access than it has had heretofore to an open port upon the Pacific. It is a strange phenomenon in this enlightened century to hear so many complain, as we do, that Russia is trying to secure these ends not by war, but by "diplomacy" and by "biding her time." The reason why she can attain these ends by these means lies in the fact that the Fates are working for her. The natural and legitimate growth of the country is making the accomplishment of this object inevitable, and, so far as we can see, it will be a blessing to the immediate region over which she is bound to extend her control, and probably a boon to all mankind. G. Frederick Wright.

DUTCH ART AT THE GUILDHALL.

London, April 28, 1903.

The exhibition at the Guildhall has now become one of the most important events of this busy season of big art exhibitions in London. It has opened this year simultaneously with the New Gallery, which simply cannot compete with it in interest. Of course, the aims and scope of the two shows are wholly different. To the New Gallery, as to the Royal Academy, artists send the work they have just done; at the Guildhall, a loan collection, representing one man, or one school, or one country, is hung. If this loan collection of pictures, many of which are already exhibited, proves the more important, it is because the managers of the New Gallery, instead of securing the finest examples of the best artists of to-day who do not send to the Academy, are content with commonplace. At the Guildhall, while commonplace has crept in, while it even, as I shall explain, prevails in one section, it has at least some sort of suggestive value in the historical sequence.

Primarily, the show is one of work by earlier and modern painters of the Dutch school. It is a large subject for comparatively small space, especially as the largest room in the Guildhall gallery is given over to an entirely separate collection. The earlier masters have suffered the most. As far as they are concerned, more could easily have been made of the limited opportunity. For when so little could be shown, it seems to me that this little should have consisted of one or more masterpieces by each of the great masters, instead of a few fine paintings and many inferior works of interest to nobody but the dealer in attributions. There are pictures by Frans Hals and Rembrandt that one need not be a Morellian to refuse to those painters, who, surely, would turn in their graves could they know that such performances were being foisted upon them. But then there is also one fine portrait by each that the artist and the art lover would travel many miles to see. "Admiral De Ruyter," by Hals, lent by Earl Spencer, is a strong study of strong character. It is a three-quarter length, the figure posed with as much feeling for the commanding force of the man as for its place on the canvas, the face broadly modelled, and the costume of black, with full white sleeves and a white collar, put in with the technical freedom that makes Hals seem so very modern—yet what modern could be quite so supremely skilful? You feel the strength of a man born to lead and to conquer in this portrait by the Dutch master, even as you do in the Admiral by Velasquez. Rembrandt's portrait of his son Titus, as a youth of thirteen, lent by a French collector who calls himself Monsieur X., has been seen in recent years at the Rembrandt shows in Amsterdam and London, and needs no description. But to see it again is to feel again the beauty of the face and the splendor of the color.

Perhaps it is because these two pictures give the standard of Dutch art in the past that so much else of the old work strikes one as trivial and insignificant. But there are still a few other fine things. From the same French collection comes a Ver Meer that I have never seen before anywhere, "The Cook Asleep." It is one of the usual simple Dutch gray interiors, almost bare of incident, save for a map on the wall, the rich cover of the table upon which a plate of fruit, a flagon, and a bottle are set, and the woman who sits sleeping in a corner. At the back of the room, a door opens into another apartment as quiet and gray and bare. But it all has the beauty of tone, the complete pictorial unity, by which Ver Meer and one or two other of the old Dutchmen could transform the most prosaic scene or subject with something as poetic as any Parnassus or Paradise imagined by the Italian painter. The way the black rod of the map tells against the gray wall, and the quality of that wall, the detail in the cover and the fruit, the beautiful painting of the head, so well enveloped in atmosphere, retaining so perfectly its relation to the gray background from which it is so tenderly detached—these are things worth all the thought and meaning with which the old masters of symbolism are supposed to have crowded their pictures, while they give to their painting as a whole as much dignity and solemnity as if the cook sleeping in her corner were the Madonna on her throne.

Two little portraits of women attributed to Terburg should offer a chance to the Morellian, but, however he decides, there can be no question of the charm of a silken skirt in one, of a white cap with wonderful little touches of gold in the other. And there is also a noble landscape, "Le Commencement d'orage," long catalogued and even engraved in the last century as a Rembrandt, but now presented to De Koninck by the critics, who are unanimously generous in determining that the lesser painter should not be robbed of his one masterpiece in favor of the great master who can so well spare it. There are pictures by De Koninck in the National Gallery, as well as at Amsterdam, and doubtless in most other national collections where Dutch pictures are so many as to seem at a discount; but I confess they have left with me the vaguest impression. It may be that this one splendid exception—if it is really his work, as I leave it to the critics to decide—was painted immediately under the supervision of Rembrandt, whose pupil he was. In any case, its impressiveness cannot be denied. A wide, flat, brown country, through which a stream wanders toward the sea, lies in sombre but warm shadow under a sky, spacious and cloud-swept, that must have made Jacob Maris despair if he ever saw the picture, which is now in the possession of Lady Wantage. There is plenty of pictorial incident—a windmill, a group of red-roofed cottages, figures, a town, a many-arched bridge. But the details are so harmoniously subordinated that the effect of the landscape as a whole is retained no less completely than if the country were empty as one of Pointelin's barren moorlands. Though there are a few pictures besides—notably one by Palamedes, usually a second-rate painter, of a lady at a harpsichord—that might be mentioned among the exceptions, these certainly are the works that give most distinction to the room devoted to the earlier Dutch painters.

When it comes to the modern painters—and there is no link between them and the giants of the seventeenth century—the chief merit to me seems to be in the unusually large and representative series of paintings by Matthys Maris, an artist who now rarely exhibits—who, for that matter, now rarely produces. Many of his most beautiful pictures, done before he became a slave to his ideals, belong to English and Scotch collectors, and I have seen individual examples every now and then in other loan exhibitions. But never, to my knowledge, have such a number been hung together. There is, therefore, an admirable chance to study his methods and his achievement. I cannot say that the collection alters the opinion I had already formed; to me there is still no question that he was most accomplished when he was least vague and elusive. It may be that he is now busy in pursuit of far higher ideals, but if these elude him so persistently just as he endeavors to realize them on his canvas, it cannot be marvelled that in his halting expression of them they should escape us altogether. Perhaps this is the reason he now finishes so

little. There is only one of his most recent pictures here—not a picture really, but the "Study" the catalogue calls it—which I remember having seen two or three years ago in the little Dutch Gallery. That he meant to express something charming in the two figures dimly discerned through a mist of paint there can be no doubt, but exactly what it was you wonder if he himself could say. Yet, all this elusiveness, all this vagueness, is based upon a technical precision, a minuteness in detail, that might have served as model for the English Pre-Raphaelites. A small study of "Still Life" is shown, a painting of carrots and cabbages placed against a brass plaque in the approved Dutch manner, in which, as in the Ver Meer in the adjoining room, the only beauty the painter has sought to record is the beauty of tone and color, and the only means he has used a literal and faithful copying of the objects before him. According to the catalogue, this was painted in 1872—his finest period, for to it belong also the lovely little "Four Mills," the "Montmartre," and the "Outskirts of a Town," all three full of the most careful detail, all three as poetical portraits of places as have ever been painted. There is no vagueness here, either in his manner of seeing and feeling or in his endeavor to make us see and feel with him. And if you take the last of these three, a gray town by a gray river bank on a gray winter evening, and study it carefully, you must be simply amazed at the ingenious design: the arrangement of long parallel lines in the sad pale walls, the sadder river, and the melancholy sky with the bare trees silhouetted against it; the rhythmical way in which the one tower rises above the houses at once to break and concentrate the composition; the value of the little green patches on the desolate river bank. Matthys Maris never did anything more impressive and exquisite. But in many of the pictures that followed (and a number are included in the present series), you begin to be conscious of the vagueness, the mist which was later to envelop design and detail, in which, indeed, they have now lost themselves altogether.

It must be confessed that much of the work of Jacob Maris seems in comparison only a brilliant technical exercise. He was more the artist, less the conjuror, with the brush, when he was still under the influence of his brother Matthys, and painted such sober, quiet little pictures as the well-known "Peacock Feather," "Birdcage," and "Shrine"; also marvels of minuteness and fine reticent color. But in later years he painted too much. He gained in breadth without ever tumbling into the pitfall of vagueness; but his brown towns, his blue milkpails, even his big lowering skies came to have in them something of a trick, a convention. However, when he did not dash them off according to recipe, when he studied his Holland with sympathy or made you feel that he did, he could be very stately and dignified, and the large "River and Windmills" and "Gathering Seaweed," the small "Souvenir of Dordrecht" and "A Small Bit of Delft," show him at his very best. Israels, likewise, has been the victim of over-production, the tool of his sentimental public. His pathos, too, has gradually become a matter of recipe, and more often than not degenerates into sheer mawkishness and sham. As Mr. Henley puts it, "his appeal is all too obvious. He makes no secret of his design upon your tears." And the result is that, when you see a long succession of his fishermen and fishwives at home and at work, as you do at the Guildhall (Mr. Staats Forbes and other British collectors having emptied their walls that his representation may be complete), you are tempted with Mr. Henley to receive his pathos with scoffs and sneers. But he can paint when he chooses, and there is pathos of the right sort—the painter's pathos—in the quality he gets in a simple cottage wall, or in the tiles about the chimney, the pots and plates on the mantel above, or in the glimpse of a quiet, gray Dutch landscape through a white-curtained window. And here are some of his most genuine performances—the "Sewing School at Katwyk," the "Ray of Sunshine," "In the Surf," and a few others that would seem still more accomplished were it not for the innumerable repetitions by himself and his followers.

Willem Maris, the least distinguished of the three brothers, is not seen to advantage. Mauve fares better, and many of the landscapes, and studies, and animals by him justify a reputation that has suffered at the hands of the dealers. Where the exhibition is lamentably weak is in the poor showing it makes of men like Breitner and Witsen, hanging only one example of the first, only two of the latter, though every one who has been to the museum of modern work in Amsterdam knows what a vigorous and very personal painter he is. Bauer fares no better, though he also deserves greater consideration. Van Toorop is ignored altogether. Nor is there anything to suggest that admirable black-and-white work is being done to-day in Holland. The omissions are many and serious, but there still remains much that is fine and interesting, and no American coming to London this spring and summer should miss a visit to the Guildhall.

I have referred to a quite separate collection that fills the largest room and has nothing whatever to do with the Dutch work. It is a collection of pictures lately bequeathed to the Corporation of London by a Mr. Gassiot, described as "Citizen and Vintner." He collected, it is evident, during the second half of the Victorian era, when the Royal Academy gave the standard, when the Royal Academy was rich in Friths and Faeds, Leaders, and the later story-telling Millais. By a curious chance there is no accounting for, the ideal being what it was, a few good pictures did somehow find a place. But the collection, as a whole, represents a fashion in these matters that, fortunately, has passed or is passing. It is annoying now to see it taking up space that might have been used so much more profitably; but its presence in the Guildhall at the present moment has at least one use: it proves, eloquently enough, how entirely the standards of art have changed in Great Britain —and changed for the better. While the late Mr. Gassiot was collecting his pictures, the very word Romanticism meant revolution and anarchy to the average British picture-buyer. I have quoted Mr. Henley. Within the year he has republished in book form the criticism he wrote, not more than a dozen years ago, of the Romanticists, French and Dutch, and he has found it necessary to explain in his preface that the praise which is the commonplace of to-day, at the time of writing sounded singular and violent. And so now, it is the most natural thing in the world that the treasures of the British collector should be the works of the Romanticists, and that these should be in demand for popular exhibitions, while the old Academical masterpieces, beloved by the late Mr. Gassiot and his generation, appear as old-fashioned as the really great work of art never can and never does. Correspondence.

THE PHILIPPINE ISLANDS SERIES.

To the Editor of The Nation:

Sir: Permit me to offer some explanations in regard to certain points brought out in the excellent review which appeared in your columns, April 30, of the historical series entitled 'The Philippine Islands—1493-1803.' As was stated in the prospectus of the work, the list of documents to be published was necessarily only a partial one; it included the classics of printed Philippine historical literature, supplemented by such manuscript material from foreign archives as belonged to the early period which ended about 1640. It is obvious that, in so extensive a series, new material must continually be found, as a result of investigations in so many libraries and archives; and that it is impossible to enumerate all the documents at the start. In the period above mentioned, commerce and missions are naturally the predominant subjects, but other aspects of Philippine history are by no means forgotten or slighted in our plans; they will duly appear in their natural development or sequence. One of the editors, Mr. James A. Robertson, is at this time in Seville, Spain, engaged in researches for material to be used in this work among the manuscripts collected in the great Archivo de Indias. He will also visit the libraries and archives of Madrid, Simancas, Rome, Paris, London, and other cities for the same purpose; and we are making arrangements for similar investigations in Manila and Mexico. We desire to make our selection of documents as broad and representative as possible, but the enormous mass of documentary and printed material for Philippine history, and the limitations imposed by necessity on the space available for publication, render the task of selection one of great difficulty, and we shall be compelled to omit many documents which are valuable and interesting, because we cannot find room for them. For this same reason we have found it necessary to halt at the beginning of the nineteenth century; the documents of that century alone could easily fill a long series of volumes, and we are limited to only fifty-five.

A few words as to our editorial attitude. In both the selection and the presentation of material our aim is historical accuracy, entire freedom from partisan or sectarian considerations, and fairness toward all classes and interests. Our readers need not fear either a pro-friar or an anti-friar attitude on our part; we shall simply fur-

nish the most important and valuable documents that we can secure, and those most truthful and authentic, for the purpose of tracing the course of Philippine history. Others may engage in controversies; our effort and hope are only to furnish some light by which disputed points may be made clear and the truth made known.

Both of the editors were engaged in similar work on the Cleveland reissue of the 'Jesuit Relations;' and to our publisher, Mr. Arthur H. Clark, was due (as is well known to many persons) the original idea of that important historical enterprise, and the successful conduct of its publication. The notably impartial and fair attitude of that work will therefore be continued and assured in the conduct of the present series. EMMA HELEN BLAIR,

Editor of 'The Philippine Islands.'

STATE HISTORICAL LIBRARY,
MADISON, WIS., May 13, 1903.

NOT SO BLACK AS PAINTED.

TO THE EDITOR OF THE NATION:

SIR: A rainy day in our Ozark camp induces me to write a protest against your designation of St. Louis as the most corrupt and one of the hottest cities, as alleged in your issue of May 7. I question whether any city of its size has less corruption; not a breath of scandal has ever been heard of in connection with the large city departments, in charge of appointive and professional officials. Even during the late Ziegenhein régime, the Sewer Commissioner, the Water Department, the Park Commissioner were all of the highest repute. Furthermore, our Public School Board, with its immense revenues and responsibilities, has for years been made up of the very best representative citizens, and its affairs so conducted that even the critical editor of the *Nation* would have only words of praise. The corruption to which St. Louis owes its notoriety is almost exclusively confined to the lower house of the municipal assembly, which is elected by wards, controlled by bosses who are much the same in St. Louis as in New York and elsewhere.

Regarding climate, I wish to state that, taking the average of the entire year into consideration, St. Louis will compare very favorably with any other either here or abroad. From October 1 to almost Christmas our Indian summer gives us a nearly unbroken sequence of ideal days; after a short winter, we have three or four spring months almost equalling the fall. The excessive hot weather in summer usually lasts only a few weeks, and, owing to the lack of humidity, the heat is not as unbearable as a much lower temperature in Boston or New York. The writer has spent five or six years abroad at various times, but knows of no better place for a continual residence; finer climatic conditions can doubtless be found by spending the winter on the Riviera, the summer in Norway, spring in California, and autumn in the Adirondacks. Such a composite climate is not given to any one place; and it is doubtless true that a New Englander dropping in on us during our hot spell with the thermometer hovering around 105, would not care much for our average climate.—Very truly yours.

J. M. WULFING.

STONE MILL SPRING, May 10, 1903.

LYNCHING AND COLONEL LYNCH.

TO THE EDITOR OF THE NATION:

SIR: In a letter published in your issue of December 4, 1902, in which Mr. Albert Matthews ably discusses the early history of lynch law, some uncertainty is expressed in regard to the connection between Charles Lynch and Lynch law.

In the first place it may be said that the note in W. Wirt's Life of Patrick Henry (1818), page 372, was without doubt written by Wirt and not by Roane. In William Wirt Henry's Life of Patrick Henry, II., 482, the "MS. letter of Judge Roane to Mr. Wirt" is given, but the note is not included.

Henry Howe, in his 'Historical Collections of Virginia,' in a section entitled "Lynch Law," says:

"At that time [the time of the Revolution], this country [Campbell County and vicinity] was very thinly settled, and infested by a lawless band of tories and desperadoes. The necessity of the case involved desperate measures, and Col. Lynch, then a leading whig, apprehended and had them punished, without any superfluous ceremony. Hence the origin of the term 'Lynch Law.' This practice of Lynching continued years after the war, and was applied to many cases on mere suspicion of guilt, which could not be regularly proven." (Published at Charleston, S. C., in 1845. See p. 212 for the quotation).

In a book written a few years later than the above, Howe has the following to say on the same subject:

"The Lynch Law, as it is termed, originated in Virginia at the time of the American Revolution, and was first adopted by Colonel Lynch against a lawless band of tories and desperadoes, who infested the country at the base of the Blue Ridge. This plan was afterwards followed in the west, and its operation was salutary in ridding the country of miscreants whom the law was not strong enough to punish. The tribunal of *Squire Birch*, as the person who personated the judge was called, was established under a tree in the woods; the culprit, being usually found guilty, was tied to a tree and lashed without mercy, and then expelled from the country. In general, '*the regulators*' only exercised this law upon the most base and vile characters." ('The Great West,' published at Cincinnati in 1852. See p. 183 for the quotation.)

This account given by Howe cannot be considered as wholly independent of the influence of Wirt. In his 'Historical Collections of Virginia,' Howe quotes from Wirt's book in substantiation of his statement that the practice of "Lynching" continued for years after the war. On the other hand, however, the fact that he repeated his assertions in regard to the origin of "Lynch Law" in emphatic terms in his later book, and therewith described the operation of Lynch Law in the West, is strong evidence that he had other sources of information than Wirt's book on the matter.

An account, entirely independent of any influence from either Wirt or Howe, is found in 'Colonel William Martin's Narrative of Frontier Life,' prepared about 1842 for Dr. Lyman C. Draper, and now in the Draper MS. Collections in the Wisconsin Historical Society Library. It is as follows:

"In those times there were a great many bad men settled along the frontiers who by their thefts annoyed the country greatly. Insomuch that the people entered into combinations to suppress them and formed companies called regulators. They formed in military style, with officers, etc.

"They also organized a court and appointed some three or four of their aged, discreet men judges to try criminal causes, award punishment, etc. The company would bring up suspected fellows and the court would try them. But they seldom extended punishment beyond whipping and driving them from the country, sometimes making them pay for property stolen, when they had the means.

"This method of breaking up combinations of rogues was first set on foot by Col. Charles Lynch, of Bedford county, Va., where I was raised. He and my father were acquainted. . . . Lynch at first punished with thirty-nine stripes, taking as I suppose Moses for his model. And this was for a great while called Lynch's law, meaning all unlawful whipping. Any of the old men now in the South and West can tell the meaning of Lynch's law.

"Lynch, however, has been improved upon and more severe punishments sometimes inflicted. I have given this feature of Western history from the presumption that you may not have known it." (See Publications of the Southern Historical Association, November, 1900, p. 463.)

Such is the strongest evidence bearing directly on the point under consideration. Other writers might be quoted giving contributory testimony to the connection of the name of Charles Lynch with the earliest form of "lynching," but space will not permit doing so here. An article on "The Origin and History of Lynch Law," by Howell Colton Featherston of the Lynchburg (Va.) Bar, will be found in the *Green Bag*, March, 1900, page 150.

J. ELBERT CUTLER.

NEW HAVEN, May 13, 1903.

Notes.

E. P. Dutton & Co. will publish directly 'Bank Rate and the Money Market,' in England, France, Germany, Holland, and Belgium in 1844-1890, by R. H. Inglis Palgrave, F.R.S.; and this year's Bampton Lectures, by the Rev. W. H. Hutton, on 'The Influence of Christianity upon National Character,' as illustrated by the Lives and Legends of the English Saints, with an appendix containing a hitherto unpublished manuscript Life of Edward, King and Martyr, and another on mediæval miracles.

The superb limited edition of Hakluyt's 'Principal Navigations, Voiages, Traffiques and Discoveries of the English Nation' will be marketed in this country by Macmillan Co. at monthly intervals. They are also about to publish 'Bass, Pike, Perch and Others,' by Dr. James Henshall, in the "American Sportsman's Library," and 'World's Children,' by Dorothy Menpes, with 100 illustrations in color.

The Civic Press, Bible House, announces 'Quo Vaditis? A Call to the Old Moralities.'

Warren K. Moorehead has in preparation, for publication through the Robert Clarke Co., Cincinnati, two volumes entitled 'The Stone Age: An Archæological Encyclopædia of the Implements, Ornaments, etc., of the Prehistoric Tribes of the United States,' with more than a thousand figures illustrating some five thousand variations of types.

'A Reader's History of American Literature,' by Thomas Wentworth Higginson in collaboration with Henry W. Boynton, is announced by Houghton, Mifflin & Co.

Among the new Vale Press volumes proceeding from John Lane are an abridgment

of Ronsard's 'L'Art Poétique Française,' and a selection from his Sonnets, in both cases in the original. The latter publication synchronizes with the appearance of 'Songs and Sonnets of Pierre de Ronsard,' translated by Curtis Hidden Page, which Houghton, Mifflin & Co. will issue in a limited, numbered, luxurious edition.

'The Responsibilities of the Novelist, and Other Literary Essays' and 'A Deal in Wheat, and Other Stories of the New and Old West,' by the late Frank Norris, will form part of the complete edition of his works which Doubleday, Page & Co. are bringing out. They are entirely new to print.

Our special correspondent at the late International Historical Congress at Rome, made a brief reference to the very illuminative exhibit contrived by Prof. D. Gnoli, director of the Biblioteca Vittorio Emanuele. In six rooms were displayed plans of ancient Rome, with plans and panoramic views of the mediæval and the modern city. The several stages before demolition were thus shown, along with Canina's original water-color drawings for the reconstruction of ancient edifices. A catalogue of all this is in preparation, but the principles of the collection have been already set forth in a brochure by the same scholar (Rome: Co-operative Social Printing-house). Colonel Rocchi is reported to be on the point of publishing a weighty volume on the city plans of the sixteenth century.

Our correspondent, by the way, writes: "The statement that the Campanile of St. Mark's will be rebuilt in three years, is misleading. It will take a year to make the necessary brick, three years to construct the main shaft, and another year to add the pinnacle and the *loggetta*—or five years in all. The three years mentioned in my letter referred only to the time actually required in construction."

Houghton, Mifflin & Co. have made a charming little book of the dozen letters, constituting the 'Correspondence between R. W. Emerson and Herman Grimm,' which, under the editorship of Mr. F. W. Holls, have already seen the light in the April *Atlantic*. But the original German is now first given beside the translation, which, while generally adequate, is seen not to keep the level of Grimm's elevated yet simple style. Nor is the translator's English always impeccable. "Please send us a very good portrait of you" (p. 53) needs mending for idiom, and is not an exact rendering of "ein recht ähnliches Portrait"—truly faithful, or really like. So in what comes next: "I have succeeded in getting some which *no longer*, however, seem to me to be good likenesses"—for "nicht ähnlich scheinen," that is, seem not like. The worst slip we have noticed is on page 75. Grimm encloses "ein Blatt ihrer Tochter, einen *Stich* nach dem ersten und letzten Gemälde," etc., here translated, "a sheet of her [Frau Grimm's] daughter—a *shepherd* after the first and last painting," etc.—where we should read "a print of her daughter, an *engraving* after," etc. These letters, sometimes constrained, one thinks, by his addressing a foreigner, show Emerson tolerably at ease in reading German, without being able to pronounce or speak it, and freely ordering books for his library in that language. It will be remembered that M. Auguste Laugel, visiting him in Concord during the war, remarked the number of paper-bound books on his shelves.

The Emerson portrait in this brochure (there is also one of Grimm) is the well-known full-page standing figure, with hands clasped in front. The same has been made the basis of an etching, much enlarged in scale and stopping short of the knees, by Mr. Gustav Kruell of East Orange, N. J. This print deserves the attention of collectors in the present centennial week. The method is dry point, if we do not mistake, and there is some admirable technique—remarkable indeed as coming from one who has attained the highest distinction as an engraver on wood, a contrary process. The face may not quite satisfy those who recall the sweetness and high gentility of Emerson's, even if it retains the shrewd and speculative expression that fits the rural philosopher; to us the personality is rather sequestered in the hands, of which the execution is very plastic. For the main outlines and proportions of the slender figure a photographic accuracy has been secured.

Mr. Charles Booth is now approaching the conclusion of his remarkable investigation into the 'Life and Labor of the People in London' (Macmillan Co.). The section just published deals with a subject much more difficult to treat scientifically than either "Poverty" or "Industry," for "Religious Influences" must necessarily be estimated by methods from which the bias and temperament of the investigator cannot entirely be eliminated. Mr. Booth and his assistants have brought together a mass of material illustrating the work of the various churches and missions of London, but this material has been selected largely at haphazard, without very great care for accuracy, and the judgment expressed is often no more than a superficial impression. When, for instance, Mr. Booth declares that the congregation at a certain mission service does not contain persons who have been lifted out of depraved conditions, one cannot help asking, "How does he know?" On the whole, the writer's conclusions are uttered with a confidence which scarcely seems justified, but many of his criticisms and suggestions are nevertheless of value, and it would be well for the church workers, not only of London, but of other cities, to take note of them.

The Westminster Press has printed, and the Presbyterian Board (Philadelphia) sends out, 'Studies of Familiar Hymns,' by Dr. Louis F. Benson, who had previously edited several hymnals and commented on some of their contents. His work is not at all in the sketchy style of forty years ago, when English hymnology—as distinct from hymn-making—was in its infancy; every fact is run to earth as far as possible (as in the case of "God bless our native land"), and presented clearly. It is true that not much remained to do in this line, for the ground is pretty well covered by Mr. Julian's 'Dictionary.' Nor are the twenty-five hymns here gathered offered as "the best," which might be invidious; but some of them are certainly among the best, and we may take Dr. Benson's word for it that all of them are "familiar." Only four of them date back of 1800, and nine are from the Church of England since her hymnic awakening. Of the ten American pieces, Episcopalians wrote three, Unitarians as many, while two come from Congregationalists, one is by a Presbyterian, and one by a Baptist. Lest the editor should be suspected of undue leaning to a communion not his own, he points out (p. 236) the curious fact that a good and useful Lenten hymn of Dean Milman, in general use since its appearance in 1827, was never appreciated by the American Episcopal authorities till the present book was issued in 1892. Dr. Benson's handling of his themes, like his selection of them, is catholic and modern in spirit. He praises Samuel Longfellow and his work, while mildly lamenting his progress from "Christianity" to theism, as shown in the two "Sam books" of 1846 and 1864.

Miss L. E. Hill, the director of physical training in Wellesley College, is the editor of a series of articles on "Athletics and Outdoor Sports for Women" (Macmillan Co.), in which no less than sixteen varieties of games and sports are described by experts, with hints for beginners and abundant illustrations. Golf is ably treated by Miss Frances Griscom, and Equestrianism by Mrs. Beach, while Field Hockey, which was introduced to American colleges for women only two years since, is described by its pioneer, Miss Applebee. No one can learn an outdoor game from a book of this kind, but every woman who is interested in one of these branches of athletics (and few women are not) will find useful hints and recognize the weak points in her own "form" from the warnings of these concise chapters. The book is the heaviest for its size that we have met in these days of heavy, highly-glazed paper.

The needs of our amateur botanists are well met by the new books on the identification of plants which have come to hand. Among the later aspirants to favor are the two excellent handbooks on woody plants from the press of Charles Scribner's Sons. 'Our Northern Shrubs, and How to Identify Them,' by Harriet L. Keeler, has good reproductions from photographs, and the text appears to have been worked out with care. 'Trees, Shrubs, and Vines of the Northeastern United States,' with their characteristic landscape features fully described for identification by the non-botanical reader, together with an account of the principal foreign hardy trees, shrubs, and vines cultivated in our country and found in Central Park, New York city, by H. G. Parkhurst, is likewise well illustrated, and interesting. One must not search too closely for the faults which such handbooks contain, since in few cases are the slight errors likely to be misleading to the users of them. So far as the scope of these two is concerned, they may fairly be called rivals; nevertheless, they supplement each other. At least, it cannot do harm to the students of our shrubs to learn something with regard to the variety which now exists in the nomenclature of our common shrubs, and the like, owing to well-meant endeavors to improve certain inconsistencies in the names of our plants. It now plainly appears that the times were not yet ripe for authoritative convention respecting the generic and specific names. Out of the existing chaos, order is probably to come soon, perhaps within the next score of years, but at present it is well for amateurs and for real students to have at their command works in which the different proposals as to names are clearly brought out.

'Trees and Shrubs of Prospect Park

(Brooklyn),' by Louis Harman Peet (New York: American Printing-house), is a capital guide to the woody plants there grown. It is convenient in size, well written, and is provided with instructive maps or diagrams which satisfy every reasonable requirement. A busy man seeking an afternoon's recreation in this beautiful park could hardly have better direction for his footsteps than the handbook and its outline sketches; and certainly the lounger, who is not pressed for time, could not possibly do better than to follow out slowly the charming walks suggested by the author of this work.

The excellent engravings in 'Principal Species of Wood: Their Characteristic Properties,' by Charles Henry Snow, Dean of the School of Applied Science, New York University (John Wiley & Sons), which exhibit the aspect of the timber trees, have been well selected. It is rather a pity that the pages devoted to these fine reproductions have been made to carry also the burden of certain details which detract from the general effect of the photographs. It would have been better, on many accounts, to keep the photomicrograms and the delineations of the trunk-bark separate. In the text the author has brought together a great amount of matter useful to engineers and to all workers in woods. A little fuller introduction explanatory of the technical terms employed would make the treatise more useful to the general reader; such terms as "modulus of elasticity" and "modulus of rupture" mean very little to the beginner. But the beginner, and in fact every general reader, will be glad to have the clear definition of quartered oak, which is given in the following words: "Logs are sometimes sawn into quarters, and then into pieces crossing and exposing the yearly rings. These quarter-sawn surfaces are structurally stronger and better, but are, by reason of waste or small pieces, more costly than others. The pith-rays of some woods, such as oaks, are very prominent when split as they are in quarter-sawing, and the appearance of such woods is consequently improved." The nomenclature is somewhat confusing. In the case of Kauri, *Dammara* and not *Agathis* is employed, while in other cases the names go abreast or even a little ahead of the most advanced reforms. A full and accurate index removes, however, all liability to serious error or even misunderstanding in the matter of generic and specific names.

Mr. Henry F. Waters's Genealogical Gleanings in England were anything but exhausted in the two stout volumes in which they were finally published. While he himself has resought his native New England, his thousands of notes have been left in England, at least temporarily, and their present custodian, Mr. Lothrop Withington, has leave to prepare them at his convenience for the printer. These references to wills and administrations have accordingly begun to appear in the April number of the *Genealogical Quarterly* (Boston: The Research Publication Co.), in an alphabetical order (Abbott-Agas). They lack, of course, Mr. Waters's masterly correlation and the coöperative annotation by local genealogists which lent so much value to the original 'Gleanings.' Still, the editor of the *Quarterly*, Mr. Eben Putnam, contributes here and there a note, besides references to the 'Gleanings.' The source of the new matter is always indicated. In the same number of the *Quarterly* the early records of the First Church in Cambridge, Mass., begin to be printed.

In the Consular Reports for May it is stated that there was a decrease in the crude-oil production of the Baku fields in 1902, the first in eight years, on account of the overproduction of the previous year. The price declined to a "figure which was in many cases less than the amount to be paid the Government as royalty on the territory." The exports fell off, also, in consequence of the strikes of the workmen in the can and case factories. Consul-General Mason of Berlin reports an improvement in Germany's business conditions in the past year, but says that there are still signs of industrial paralysis which are not encouraging. The most significant of these is the decrease of the imports of the indispensable raw materials of manufacture and the cheap food materials which are essential to economical labor. He also contributes a valuable account, with illustrations, of the potato as a source of wealth in Germany. Its importance may be gathered from the fact that for every 10,000 inhabitants there were planted in 1900 160 acres of potatoes, as against 31 acres in Great Britain and Ireland and 34.8 acres in the United States. By an elaborate scheme of scientific fertilizing and cultivating organized by the Bureau of Agriculture and carried out in experiment stations in different parts of the empire, "the general yield per acre has been raised by not less than 38 per cent. during the past ten years." A continually increasing part of the crop is used in the manufacture of alcohol for motors and household purposes, as lighting and heating.

—It has been a commonplace of American history that the founders of the English colonies were men of considerable education. The early annals are full of evidences of the fact, not only that there were many university graduates, but that, what is more important, most of the first settlers in New England had a thorough grounding in the elementary branches of learning. Just what their schooling consisted in, however, has been a question frequently asked, but not satisfactorily answered. Many attempts have been made to describe the beginnings of the American public school, but each fails in the essential particular of telling what and how the seventeenth-century schools taught the children. The difficulty has been that no one had investigated with sufficient care the old English schools in which the colonial settlers received their first lessons, and which they undertook to reëstablish in America. The solution of the puzzle is due to Prof. Foster Watson of the University College of Wales, who has for some years been gathering notes on early English text-books. His description of these, "The Curriculum and Text-books of English Schools in the first half of the Seventeenth Century," published in the Transactions of the Bibliographical Society (London, February, 1903), is a very important contribution to an understanding of the intellectual equipment of the people who left England in and after 1607, 1620, and 1630. Professor Watson shows that the notes of sermons, in shorthand, in abstract, in heads, in commentary, which bulk so largely in every collection of the "remains" of colonial times, were not merely an expression of the intense religious interest of the period, but were a direct result of school training, which required the pupils, as a part of the regular school exercise, to reproduce the weekly sermons. "Besides," as Brinsley explains, in his 'Ludus Literarius, or the Grammar School,' published in 1612, "it will keep them from playing, talking, sleeping, and all other disorders in the church. To this end, therefore, pose diligently all those whom you observe or suspect most negligent; then you will have them to attend heedfully." And, further, that there may be no possible doubt that the stern Puritans, in their youth, resembled some of their remote descendants, "there must be great care by the monitors, that they trouble not their fellows, nor the congregation, in asking notes, or stirring out of their places to seek one another, or any other disorder." Professor Watson is planning to organize an "Early Text-Book Reprint Society," to reproduce the more significant of these guides to what the seventeenth century knew. It is to be hoped that he will receive ample support from American libraries and students, to which these should appeal quite as much as to English students of history and education.

—In volume x. of the Camden Miscellany the Royal Historical Society publishes three new documents: the Journal of Sir Roger Wilbraham for the years 1593-1616, a diary of travels by Sir Thomas Hoby, and a narrative entitled "Prince Rupert at Lisbon." The last is the shortest of the three, but possesses some importance as proving that Prince Rupert had made diplomatic arrangements in 1649 which gave him free access to the court of Lisbon, and placed the King of Portugal in almost open antagonism to the Commonwealth. Dr. S. R. Gardiner wrote a short preface for this relation, and Mrs. Gardiner has revised the text for the press. Of the other two pieces, we have found Wilbraham's Journal less striking than Hoby's. Wilbraham was Solicitor-General in Ireland and Master of Requests during the last years of Elizabeth and at the opening of the reign of James I. He was an unworthy person, who fattened on the spoils of Ireland and wrote a fulsome panegyric of Elizabeth and James. The Master of Requests was supposed to exercise a certain equity jurisdiction, but under such a man as Wilbraham the expenses of law could have been cheapened little if at all, while the Master's judgments were probably subject to the same influences which affected those of Lord Bacon. Sir Thomas Hoby, on the contrary, was an amiable and accomplished man, a student of languages and a diplomatist of great promise. His translation of Castiglione's 'Cortegiano' is almost as famous as Florio's 'Montaigne,' and very probably had some effect from holding up the ideals of a gentleman to the admiration of Tudor England. Sir Philip Hoby, an elder brother of the translator, rose in the service of Henry VIII. and Edward VI. until he became a privy councillor and envoy to the Imperial Court.

—Thomas was born in 1530, received his education at Cambridge under Sir John Cheke and at Strassburg under Martin Bucer, spent 1550 in Italian travel, and afterwards entered upon a diplomatic

career. He was only twenty-three years old when he made his translation of the 'Cortegiano,' which was four times reprinted during the reign of Elizabeth. The most interesting portions of his diary relate to his travels in southern Italy and his account of German -vents in 1552, the year when Maurice of Saxony chased Charles V. from Innsbruck and extorted from him the concessions of Passau. One gathers from Hoby's description of the Terra di Lavoro and Sicily that these regions enjoyed a greater degree of prosperity at the middle of the sixteenth century than one might be inclined to suppose from a general knowledge of Spanish administration. As for the events of 1552, Hoby was in a position to get accurate intelligence from his brother, Sir Philip. We give a little anecdote regarding the Duke of Alva. At Innsbruck there dwelt in 1552 a gun founder, "one of the best in his science of all Christendom, a verie discreate and sober parson. This mann (as he told my brother the tale) had a . . . great peecs of artillarie in hand for the Duke of Alava, which he minded to carie into Spaine. Upon these peecs the Duke had cawsed to bee graven the armes of Philipp, Lansgrave of Hess, with his stile, which was the Emperor's prisoner, and all for a certain vain glorie that menn shuld beleave he had gotten them in the feeld by prowess of armes. The Lansgrave's sonn, who was in Duke Maurice hoost, seeing those peecs there with his father's armes upon them, ceased upon them and tooke them awaye with him, geving to the gunn founder's wyff an hundrethe crownes to drinke." Sir Thomas Hoby became envoy to the Court of France in 1566, and died at Paris about four months after his appointment, aged thirty-six.

—An octavo of 543 pages (Longmans, Green & Co.) is entitled 'Higher Mathematics for Students of Chemistry and Physics,' by Dr. J. W. Mellor. It consists of a limping treatise on the calculus and matters connected therewith, including trigonometry, the theory of equations, and the like, to which are appended fifteen pages of numerical tables. It will prove a handy instrument for anybody who has not the same thing in more convenient form on his shelves; but its limitations will be a perpetual vexation. Such a book ought to be written by a master of the subject, a very different person from Dr. Mellor. Mathematics is useful to the physicist in two ways. First, it enables him to solve his own problems instead of employing a mathematician. In this respect it is a great convenience, but not indispensable. Secondly, it supplies him with fundamental conceptions and methods of thinking without which he never can rise from the ranks of the army of science. A volume like this can be of service only in the former way. The prime necessity for a chemist or physicist who proposes to do his own sums is a mastery of synthetic geometry. Beginning with the new doctrine of multitudes and ordinal numbers as a propædeutic, he should first familiarize himself with the results and methods of topics—the geometry of a universe of distortable but unbreakable things, no standard of straightness or of length being supposed. Next should come graphics, the doctrine of unlimited straight lines, comprising perspective, projective geometry, graphical statics, etc.—invaluable tools, all. Next, metrics, comprising the elements of geometry, Euclidean and Non-Euclidean, the Brocard geometry, etc. Of all this synthetic mathematics Dr. Mellor gives not one word; and his book should have been entitled, not Higher Mathematics, but Mathematical Analysis. Passing to this, the student should begin with algebra and analytic geometry, of which Dr. Mellor gives extracts. He should then make himself as familiar with the calculus of finite differences in its entirety as with his mother-tongue. Dr. Mellor allots about twenty-five pages to the fringes of this subject. Then should come the differential calculus, including trigonometry and the theory of functions, in its fullest modernity. Here quaternions may be taken up. Finally, such subjects as probabilities, rigid dynamics, molecular dynamics, hydrodynamics, viscosity, aerodynamics, must be studied. It is a vast course; but one cannot take high rank among the coming generation of physicists or chemists at any cheaper rate. A hand-book of rules and formulæ, of which there already are several, though none which accurately meets the need, would be, of course, an immense convenience. Numerical tables are best given in separate collections. A collection better suited to the uses of physcists than any now existing could easily be made, but in any case he would require his separate Crelle's 'Rechentafeln.'

SIR WILFRID LAURIER AND THE LIBERAL PARTY OF CANADA.

Sir Wilfrid Laurier and the Liberal Party: A Political History. By J. S. Willison. In two volumes. Toronto: George N. Morang & Co., Limited. 1903. Illustrated. Pp. 472 and 451.

Mr. Willison has been for some years the very successful and highly respected editor of the Toronto *Globe*, the chief organ of Sir Wilfrid Laurier's party. He has now exchanged that position for the editorship of an independent paper, his entrance upon which is a very interesting event in Canadian journalism. But we can scarcely expect him at once to doff the editor of the *Globe* and become the judicial critic of the leader and the party whose best advocate up to this time he has been. We must be satisfied if partiality is kept within bounds, and a reasonable measure of equity is extended to the other side.

Sir Wilfrid Laurier is a notable figure in Canadian politics. He is a Frenchman whose political character has been formed under British institutions, while he combines with that character French refinement, elegance, and tact. Not only is he an extremely pleasing speaker, both in English and in French, but he can adapt himself easily to the tastes and sentiments either of an English or of a French audience. He is, as a rule, studiously courteous in debate, and never, even in campaign speeches, is betrayed into anything violent or gross. Nobody questions his personal purity, at whatever he may be compelled to wink as a party leader. At the same time he is a complete and almost avowed opportunist. "The Prime Minister," says one who has just left his Cabinet, "has in fact no very strong opinion on matters of this [fiscal] kind. He is an opportunist; his favorite doctrine being that each day should look out for itself." Sir Wilfrid is very happily gifted with a remarkable facility of presenting in the best light each of the successive positions into which by the current of events he is borne.

He is a Catholic, but very liberal; one of the school of Montalembert and Lacordaire, who, trying to combine Catholicism with liberty, died under a cloud of Papal displeasure. In Quebec he was numbered with the party Rouge, Liberals who are not revolutionary, though they respect the patriotic traditions of 1837, but are opposed to the political domination of the priest. There was a curious incident in this part of Sir Wilfrid Laurier's career. He was a member of the Institut Canadien, a literary society which was excommunicated in the mass for admitting anti-Catholic works. Guibord, a member of the society, died, and the Church sought to exclude him from burial in his lot in the Catholic cemetery, on the ground that he was excommunicate. Thereupon there was a lawsuit which at last went to the British Privy Council, the judges in which debated "with iron gravity," to use Carlyle's phrase, the question whether people under the ecclesiastical law of the Church of Rome could be excommunicate in the mass. The judgment was that the excommunication must be individual. Preparations were made to bury Guibord in his lot. The Catholics resisted. There was great danger of an affray; when the Bishop cut the knot by mounting the pulpit and declaring the ground in which the heretic was to be laid de-consecrated, so that the faithful around might rest uncontaminated and in peace.

Mr. Laurier passed from the Provincial Parliament at Quebec to the Dominion Parliament, where he was the chief of the French members, and soon by his eloquence won high place. When the French half-breeds of the Northwest rebelled, the heart of the French province was with them. Mr. Laurier then pleaded their cause and denounced the execution of Riel, the organizer of the rebellion, in burning words, which rose in judgment against him when he was committing himself and Canada to the excesses of British martial law in the Cape Colony.

The party styled Liberal, though without much reason, was at this time in opposition. Its leader, Mr. Alexander Mackenzie, a very honest and worthy man, though too much devoted to details, was supplanted in the leadership by Mr. Edward Blake, an eminent advocate and jurist, but, as a leader of men, out of place. Upon Mr. Blake's resignation, Mr. Laurier was presently called upon to lead the party in a general election against the Tories under their veteran, wily, and long successful chief, Sir John A. Macdonald. The history of that election given by Mr. Willison is curious. There was at the time no constitutional ground for a dissolution, but the Government, seeing that its protectionist policy—national policy, as it was called—was losing ground, resolved to snap a verdict. It was, however, necessary that some constitutional ground for a dissolution of Parliament before the expiry of its term should be assigned. The Government gave out that negotiations were on foot with the United States for reciprocity, and that it required a popular mandate. Our Secretary of State,

Mr. Blaine, at once put forth a note stating that no such negotiations were on foot between the two countries. An appeal was next made to the loyalty of the Dominion by pretending, without the shadow of a ground, that Mr. Laurier and his party were conspiring to betray Canada to the United States. The appeal, though not only dishonest but supported, as we learn from Mr. Willison's narrative, by dishonorable means, was successful, and Mr. Laurier remained in opposition.

After the death of Sir John A. Macdonald and his successor, Sir John Thompson, the Conservative party was broken up by internal dissension and treachery. Mr. Laurier and his party then came into power. Their election platform had been free trade, or at least tariff for revenue only; and their leading economist, Sir Richard Cartwright, a man of great ability and force, had been always the sworn foe of protection. But they presently showed that they appreciated the political, perhaps also the financial, influence of the protected manufacturers, and began to talk of the respect due to vested interests and of stability of tariff. To stability of tariff, however, they still adhere, refusing to listen to the demands preferred by the protected manufacturers, of course on patriotic grounds, for further measures of protection.

Mr. Laurier now shone forth in a new and very striking character—that of a French Premier, and the great man of the French province enthusiastically attached to British institutions and connection. The pledge of his attachment was a tariff giving a preference of 33 per cent. to British goods. His rewards, besides the medal of the Cobden Club, to which his title was somewhat equivocal, were knighthood, a seat in the British Privy Council, and an enthusiastic ovation in England, where all eyes were fixed upon him as he rode in the Jubilee procession. Advocates of an Imperial Zollverein and Imperial Federation believed that they had at last found their man, and the sight of Imperialism embodied in a French-Canadian might well gladden their hearts. Canadian Tories were filled with chagrin at seeing their clothes thus stolen by the Liberal chief. But the belief that England was going back to protection never had much foundation. The British grain duty, which raised the hopes of protectionists high, has been abandoned. The Canadian preference in favor of British goods has been cancelled. The dream of Imperial Zollvereiners is at an end. So, probably, will soon be the dream of Canadian contribution to the British army and fleet.

A signal instance of Sir Wilfrid Laurier's opportunism is his conduct with regard to the reform of the Senate. The Canadian Senate is not elective, but is appointed by the Crown; that is, practically, by the head of the party in power. The long reign of Sir John A. Macdonald had filled it with Conservatives. Sir Wilfrid then moved earnestly for a reform of the Senate. Deaths have now reversed the balance, and though scandalous proof of the need for reform has recently come to light in the shape of an attempted sale of a Senatorship for a contribution to the party fund, Sir Wilfrid Laurier speaks of Senate reform no more.

The political cable which binds Canada to the Imperial country has, by successive concessions of self-government, been worn to the last strand; and of that strand about the strongest thread is the extraordinary craving of Colonials for Imperial titles and decorations. Sir Wilfrid Laurier is not the sort of man by whom that distorting influence is likely to be especially felt. No one would suspect him of being a sycophant or a title-hunter. But he is a knight and a Privy Councillor; and it is not in human nature that these titles, and the connection with the court and aristocracy of England which they involve, should fail in some degree to affect his sentiments and his course.

It was generally believed that Sir Wilfrid Laurier was unwilling to participate in the South African war, but yielded to the fear of being outbidden in loyalty by the Conservative Opposition, to the clandestine influence of Downing Street, and to the solicitations of a low agent of the South African Company, combined with militarist excitement. Mr. Willison, who could hardly fail to know the truth, does not contradict the common belief. The resolutions of the Canadian Parliament framed by its leader justify participation in the war on the ground that her Majesty is suzerain of the Transvaal Republic, and that "her Majesty's subjects now settled in that region are suffering under political oppression"; the political oppression consisting in the requirement of a seven years' term for naturalization (the British term being five years, with the additional requirement of the sanction in each case of the Secretary of State), while the Outlanders, for whom the concession of a shorter term was demanded, had recently invited foreign invasion.

In the preamble of the first of the two conventions with the Transvaal (1881) the term "suzerainty" was used; but it was distinctly limited to foreign relations; while in regard to domestic affairs, including, of course, the regulation of the franchise, "complete self-government" was assured. In the second convention, that of 1884, the word "suzerainty" was omitted, evidently by design, and the 'Annual Register' of the year describes the effect of the convention as "Suzerainty of England over the Transvaal abolished; England only reserving the right of veto on treaties with foreign Powers, except with the Free State and the northern Kaffir tribes." Mr. Chamberlain had himself said that "to go to war with President Kruger in order to force upon him reforms in the internal affairs of his state, with which successive Secretaries of State standing in that place had repudiated all right of interference, would have been a course of action as immoral as it would have been unwise." Lord Salisbury had said that the Boers had absolute control over their internal affairs. Mr. W. H. Smith, a Conservative leader of the House of Commons, had said, "It is a cardinal principle of that settlement [the Convention of 1884] that the internal government and legislation of the South African Republic shall not be interfered with." The Jameson raiders were tried under the Foreign Enlistment Act for fitting out an expedition against a foreign state at peace with Great Britain. The Lord Chief Justice had on that occasion defined the Transvaal as a "foreign state with which her Majesty was in friendly treaty relations." He said:

"The position of the South African Republic . . . is determined by the two Conventions of 1881 and 1884. The result is, that under these Conventions the Queen's Government recognize the complete independence and autonomy of the South African Republic, subject only to the restriction contained in the Convention of 1884, to the effect that that state should have no power to enter into any treaties without this country's consent, except as regards one or two minor states, one of which is the Orange Free State."

Did Mr. Laurier know these facts when he led the Canadian Parliament to rest its recorded justification for engaging in a war with a people who had never done Canada any wrong, on the existence of the suzerainty and the obligation to enforce political reform? Destiny can hardly appiy a more decisive test to the character of a statesman than by setting him to choose between a possible loss of office and consent to an unjust or unnecessary war. That test was put to the character of Sir Wilfrid Laurier, and Sir Wilfrid Laurier chose consent to the war.

HEGEL'S LOGIC INTERPRETED.

Hegel's Logic: An Essay in Interpretation. By John Grier Hibben. Charles Scribner's Sons. 1902. 12mo. Pp. 313.

Hegel made easy; Hegel brought to the level of the meanest capacity. It is really surprising how clear these things can be made, if they are disembarrassed of some tangles which are perhaps not so essential as they have been thought to be. The first pages delight one; but as one reads on, one begins to think that the effect is very much as if one were to explain to a child of five in the clearest terms, quite on the plane of its thought, all the facts and truths of life, domestic and social. That that child would understand life just as an adult understands it, is true in the same measure that Professor Hibben's reader will understand Hegel's philosophy as Hegel understood it. Those parts of Hegel's doctrine which set ordinary logic at defiance—that is to say, the woof and warp of his whole work—are treated as being merely a manner of phrasing. As we turn over the leaves, our eye lights often upon such expressions as "only an epigrammatic expression" (p. 86), "his epigrammatic manner" (p. 130), "striking epigram" (p. 37), "an enigmatical form" (p. 115), "the Hegelian figure" (p. 157), "should be taken in a figurative rather than a literal sense" (p. 113), "in his characteristically paradoxical manner" (p. 152), "a paradox, as thus expressed" (p. 151). Once only do we find any intimation that to Hegel himself these things were more than that; and even then it is passed by without one full sentence being given to it.

Whoever has dipped into Hegel ever so little, will ask in astonishment how it is possible to interpret him so. The explanation seems to be that the master's incessant overstraining of reason, without which his system could not have been put together, seems in this disciple, as in many another, to have had the effect of destroying all the tonicity of his thought and leaving it lax and flaccid. Here is a professor of logic who cannot even state the ordinary doctrines of his own discipline accurately. "The general standpoint . . . was that thought presents to us . . .

alternative judgments, one of which must be wholly true and its opposite wholly false." Who ever maintained such a position? The opposite of the wholly true is that which is *more or less* false. But, in accordance with this, Professor Hibben claims that "it is only when his [Hegel's] entire system is unfolded that we can have any basis for judging" it. Until a man's whole say is said, one will generally be unable to pronounce that it is wholly true; but he need sometimes go but very little way before betraying that it is more or less false, or even quite unscientific. "The traditional law of logic known as that of excluded middle [meaning the *principle* of excluded middle] is enunciated thus: 'that of two opposite predicates, one, and only one, can be assigned to one and the same subject.'" Now if a professor of logic deliberately teaches what he ought to know is false, how can we otherwise excuse him, or avoid one or another more serious accusation of him, than by saying that he is a loose thinker? The principle of excluded middle does not belong to the so-called "traditional" logic, since, although it occurs in Aristotle as a definition of the kind of opposition called contradiction, and in other passages in dissent from a statement of Plato's, yet it plays no important part in Aristotle's system, and was first made a fundamental principle by Wolf. The whole purpose of the name and of the enunciation of the principle is to render it clear that what Professor Hibben wrongly states as this principle involves two distinct principles: first, that an affirmative and its corresponding negative predicate—as "black" and "not-black"—cannot both be true of the same definite subject, in the same definite respect; and second (and *this* is the principle of excluded middle) that of two such predicates one or the other must be true of any *single individual*.

The author is equally unsuccessful in explaining the "principle of sufficient reason." He calls it "the fourth law of thought, which is associated with the name of Leibniz, and is known as the law of sufficient reason, viz.: 'Everything must have its sufficient ground,'" and he proceeds to expound it in two or three pages. This principle, for such it is usually called, not only is "associated with the name of Leibniz," but was originated by him in a more exclusive sense, perhaps, than that in which any other philosophical principle of equal renown can be attributed to any one author. Nothing bearing more than a faint resemblance to it has been found in Plato, Aristotle, the Stoics, Suarez, Descartes, Spinoza, or any other philosopher, not even in Yakob Thomasius. It is variously worded in German, but usually somewhat thus: "Alles Zufällige hat seinen zureichenden Grund." Here, the German word *Grund*, corresponding to *raison* in Leibniz's formula, should be translated "reason." Whatever Hegel meant by *Grund*, it is not the "reason" of this principle. Another inaccuracy in Prof. Hibben's statement of it, though usual enough, lies in the words "must *have*." Leibniz was far too nominalistic to think that existing things really *have* reasons. He may seem to say so, using the phrase "there is a reason"; but what he means and sometimes says is, that a "sufficient reason for the thing's being as it is *can be found* out by the intellect." One of the recent treatises on logic formulates the principle very correctly, at least on one side of it, as follows: "Jedes behauptende Urtheil is zureichend zu begründen." It is undoubtedly implied by Leibniz that a really sufficient reason must refer to some operative condition of the reality of the fact. But to assert, as Hibben and some other Hegelians have done, that Hegel's theory of reality ("Die Lehre von Wesen") is implied in the 'Monadologie,' is simply to put into a strong light the deleterious effect upon the brain of much reading of Hegel.

If we had the space to give to it, we could show that there are few, if any, statements in this book concerning the ordinary doctrines of logic or concerning the present state of logical discussion that are anything like accurate. Professor Hibben's own thought, in the few instances in which he has permitted himself anything like a free use of reason, is washy; and the maxims that he holds up for admiration—virtually, for example, that precise definitions, and precision generally, should be eschewed—are calculated to confuse discussion and to prevent its issuing in the test of experiment. Such, for instance, is the maxim "that every term which we employ in philosophical thinking should represent . . . an idea of universal and necessary significance, and that such a notion cannot have a one-sided, abstract, and rigid meaning." The proper maxim should be that ideas of universal and necessary significance and of a world of protean application may be taken one or two at a time as the *subject* of philosophical reflection; but that this reflection is of no use or meaning except so far as it is expressible in rules having reference to some conceivable practical upshot of all the thinking; so that it is the one-sided, abstract, and rigid conceptions that ought to be the philosopher's tools. Civilization, so far as physical science—including physiology and bacteriology—has had a hand in it, is the result of trying to find out what one-sided, abstract, and rigid formulæ express the way in which events will happen; and quite amazing is Professor Hibben's assertion that experientialists hold that "it is the function of thought to interpret experience, and not to anticipate it."

But, notwithstanding all we have said, it remains true that, if one does not care to trace and examine that movement of Hegel's thought which is supposed to be accurate, but wants only so much of his results and their relations to one another as is viewy and broad, then this book furnishes what one desires with greater success than any other we have seen. Of course, it is confined to the 'Encyklopädie,' and almost entirely to the 'Logik,' and that mostly as Hegel himself left it. It is a syllabus for lectures.

But all these Hegelians—Harris, Wallace, Hibben, Everett, etc.—who dog the steps of their master in almost textual comments, are profoundly unfaithful to the spirit of Hegel and of his philosophy. The 'Logik' was intended to be a mirror of the whole development of mind; and Hegel, with all that romanticism that was characteristic of his epoch, was far more essentially and determinedly a man who wished to be up to date in all his mental development. Now ninety years have paraded before us since the 'Logik' was written; and the result is that it now condemns itself. In the first place, the system, not in its deeper and truer spirit, but as it is worked out, and notwithstanding a sop tossed in one of the closing sections, is anti-evolutionary, anti-progressive, because it represents thought as attaining perfect fulfilment. There is no conceivable fulfilment of any rational life except progress towards further fulfilment. The 'Logik' is supposed to mirror the history of mind; and its first step is made to correspond to Thales, who ninety years ago seemed to stand at the threshold of thought. Thales, however, lived only twenty-five centuries ago; and we now know that men read and wrote fifty centuries before him, while the development of mind began countless eons before man became man. And it is evident enough that all Hegel's categories properly belong to his third grand division, the *Begriff*. What, for example, could be more monstrous than to call such a conception as that of Being a primitive one; or, indeed, what more absurd than to say that the *immediate* is *abstract*? We might instance a dozen such self-refutations. That the Hegelians should have allowed the obviously unsuccessful development of the doctrine of *Wesen* to stand all these years uncorrected, is a striking instance of the mental fossilization that results from their method of study. A powerful and original study of what the true Hegelian doctrine of *Wesen* should be, according to our present lights, might breathe some real life into a modified Hegelianism, if anything could have that effect.

RECENT FICTION.

The Untilled Field. By George Moore. Philadelphia: J. B. Lippincott Co.

Darby O'Gill and the Good People. By Herminie Templeton. McClure, Phillips & Co.

Cap'n Simeon's Store. By George S. Wasson. Houghton, Mifflin & Co.

Middle-Aged Love Stories. By Josephine Daskam. Charles Scribner's Sons.

The Adventures of Harry Revel. By A. T. Quiller-Couch. Charles Scribner's Sons.

It is common to account altogether for the sorrows of Ireland by her wrongs, and to suppose that if you give the Irish peasant the land, you will secure for that sick nation health and wealth. There are, however, intelligent Irishmen who probe deeper into the causes of national depression in Ireland, and of these Mr. George Moore is not the least outspoken. In a dozen short stories, or rather studies, he dwells on the lack of vitality among the peasants of Catholic Ireland, the lack of all romance in their lives, the utter joylessness that is not to be explained away by economic causes. "In the country districts Irish life is one of stagnant melancholy; the only aspiration that comes into their lives is a religious one. It will be said that the Irish are too poor to pay for pleasure, but they are not too poor to spend fifteen millions a year upon religion."

Mr. Moore's contention is, that unless something is done to stop the constant drain of the population into the priesthood and the conventual life, the Catholic laity will become extinct in a generation. There are only two ideas in Catholic Ireland: emigration and the priesthood. At the opening

of the last century there were one hundred nuns in Irish convents; there are now twenty thousand. "Ireland," says Mr. Moore, "is emptying before the priests. In other countries Religion has managed to come to terms with Life." But in Ireland the priests sternly repress courtship among the peasants, and arrange marriages on any basis rather than that of inclination. Social gatherings are discouraged, dancing is denounced from the altar, and all relaxation is treated as sinful.

"I turned to the driver and asked if there was no courting in the country. 'There used to be courting,' he said, 'but now it is not the custom of the country any longer.' 'How do you make up your marriages?' 'The marriages are made by the parents, and I've often seen it that the young couple did not see each other until the evening before the wedding—and sometimes not until the very morning of the wedding. Many a marriage I've seen broken off for half a sovereign.' "

Elsewhere Mr. Moore writes:

"The sexes mingle freely everywhere in Western Europe: only in Ireland and Turkey is there any attempt made to separate them."

The possibility of a Celtic Renaissance through a revival of the language is rejected by more than one character in these stories; for the priests, peasants, and reformers whose lives the writer paints with grim realism, are introduced to discuss Mr. Moore's theses, and the whole is frankly written with a purpose. Ireland sadly needs a Dickens, a humorist "with lights of tragedy in his laughter," to expose the social weaknesses with which no Land Bill can reckon. But Mr. Moore is hardly fitted for the part. He is Mr. Meredith's typical "agelast," and his pages reflect no ray of humor. They leave the reader oppressed with the hopelessness of a country in which a majority of the peasant proprietors believe that an offended priest can turn them into rabbits, while they are taught by an all-powerful church that "we are here, not to make life successful and triumphant, but to gain heaven" (p. 215).

The adventures of 'Darby O'Gill' are conceived in quite another vein. Here we have the traditional Irish fairy tale, in which even the banshee is pressed into the service of comedy, where every peasant is jovial, and every priest cracks jokes with his parishioners. These slight stories have no aim, and illustrate nothing but the amusing element in superstition; the seamy side is ignored, and the dialect is written with much spirit and correctness.

Mr. Wasson is advertised as "taking rank as one of the best writers of New England salt-water sketches," which reminds us of the man who prided himself on being the second authority in England on gray shirtings. His stories have appeared in the monthly magazines "in real dialect," and those who can read them doubtless find them amusing. The book is full of strange oaths, such as "Godfrey Mighty" and "gracious evers," and we confess to an inability to appreciate this sort of lingo: "'Twas a dod-blowed wonder the tar wa'n't every mite squat outen me, but someways this 'ere foot made out to take the heft on't, and ole Dr. Roundturn he turned to and trimmed them toes down slick's a whistle." There is a good deal of humor in these sketches, which reek of tar and brine and oilskins; but, for the ordinary reader, the effort of quarrying for it will probably prove too arduous.

The seasoned reader is suspicious of volumes of stories grouped round a central common feature. Like the book of 'Essays on Cats in Furnaces,' their "violent birth" too often ends in "poor validity." True, a collection of stories about middle-aged love affairs carries, at first glance, a prettily autumnal idea made up of sunsets and Indian summers and Michaelmas daisies. But reading only brings back distrust of the scheme. The stories are too palpably engineered into these boundaries. The course of true love may run smooth, it may run rough, but it runs, and the moment it is diked and ditched by the author's self-prescribed limitations, the effect on the reader who has small interest in seeing what may be done under hampering conditions, is stiff and stiffening. Yet the plan, if infelicitous, is not hopeless. It is in the carrying out as Miss Daskam has carried it out that the trouble lies. To counteract the autumnal ages of all the contracting parties, there is an averaging spring-lamb of sentiment that is mawkishly soft to the touch. The incidents are laboriously coaxed together in behalf of the middle-aged idea, and are not relieved by the frequent humorous passages, which in their turn seem foolishness in the twilight of belated romance. Having accepted the inevitable in the way of silver-flecked locks and the advantages of tiny wrinkles, the reader finds it disconcerting to come suddenly upon an epigram like "Better fifty years of poker than a cycle of croquet." The story which best holds the balance between matter and manner, humor and sentiment, is "Julia the Apostate." Leaning to humor's side, it becomes for that very reason the more effective romantically.

'Harry Revel' begins in a foundling hospital in Plymouth, and proceeds through chimney-sweep circles, via murder and innocence suspected, to smugglers' haunts on the Cornish coast, to military episodes in the Peninsular war, and thence northward to the place of beginning. It is a refreshingly told tale; not only a rattling one, but vocal with fuller harmonies than those of rattles. The hackneyed might so easily have prevailed, and it is never even present. The foundling's career is unrolled to the reader without rubbing the well-nigh raw spots of foundlings' lives as told in fiction. The eccentric folk who largely make Harry Revel's world fit into it without reducing it to absurdity. The salt roughness of Cornwall is no breeder of daintiness, and here and there manners run a trifle rude. But it is a good, snapping story in a vein of original saying and doing. As an instance stands the portrait of Miss Plinlimmon, the Matron, who did not maltreat the foundlings, whose heart was kind, whose aspirations to the poetic and literary life found vent in "occasional verses" sublimely true to would-be poetic achievement. We quote one among several gems:

> "Wounded here, you were shattered
> In the ankle—do not start!
> Much, much more it would have mattered
> In the neighborhood of the heart.
> The bullet sped comparatively wide,
> And he survives to be Old England's pride."

Les Héros de Roman. By Boileau. Edited with introduction and notes by Thomas Frederick Crane, Professor of the Romance Languages in Cornell University. Boston: Ginn & Co. 1902.

This dialogue is not by any means the best known, nor perhaps the best, of Boileau's writings. Critics give it merely a passing mention; some editions do not contain it, and this is the first time it has ever been published separately, even in French. 'Les Héros de Roman,' however, is far from being insignificant. Boileau declared it "the least frivolous" of his works. In fact, it is a parody and a "take-off" on the fiction of the day, written after the fashion of Lucian. The scene is laid in the nether world, and the dead heroes of Rome and Greece are the principal characters. That is what makes it an interesting and entertaining document of seventeenth-century literature. It is Boileau's protest against the absurdities of those long-drawn-out novels, in ten volumes, of D'Urfé, La Calprenède and Mlle. de Scudéry, which enjoyed such enormous vogue between 1620 and 1660. Boileau, like everybody else, had read them, and admired them, when he was in that early stage of dime-novel reading through which we all pass, and in which some always remain. But when he grew older, his rugged common sense began to be shocked by that artificial and childish literature in which shepherds were made to talk like *précieuses*, and captains of ancient times were shown indulging in sentimental and foolish *verbiage d'amour*, drawing maps of the "pays de Tendre," and busying themselves with the games of "questions" and "enigmas," that were the fashion of the drawing-rooms of the day. He then composed, in 1665, this dialogue, which he used to recite, with great success, to his friends, publishing it only after the death of Mlle. de Scudéry, and when many spurious editions had made it known to the public.

It may well be that 'Les Héros de Roman' does not possess the most delicate kind of wit, as M. Brunetière has it; but all will agree that it is an amusing, wholesome satire, which every student of that special side of French literature must and will enjoy. Accordingly, the edition that Professor Crane has brought out with such painstaking care and marked success is most welcome. Hardly any objections can be made to this excellent work, except, perhaps, that there is too much of it. The book is no longer an edition of Boileau with an introduction and notes. It is an exhaustive essay on Boileau, on French fiction and society in the seventeenth century, followed by a short appendix made up of Boileau's dialogue. The introduction covers 161 pages, while the dialogue occupies only 64. Moreover, there have been added to it some very important documents, such as the reproduction of one of the earlier versions of the dialogue, published in 1688, by friends who had heard Boileau recite it; some characteristic passages from the novels to which reference has been made; and, best of all, a facsimile of the famous *Carte de Tendre*.

The long introduction, full of interesting information and amusing quotations, makes excellent reading, and is as complete and up-to-date as the most exacting scholar would care to have it. Perhaps the author has spent too much time in conveying an idea of the plot of some of those novels

which to-day seem so dull that even a German writer, he tells us, gave one of them up in despair. As to the notes, which are all at the bottom of the page (one more precedent for which we must be grateful), they are very satisfactory as far as they go, but it seems to us that the editor has been too sparing of them. Some notes to guard students against obsolete expressions would not come amiss. Thus, in the following sentence: "Assurément ils n'ont pas osé lui toucher" (page 182), it was indispensable to note that the use of *lui* not merely is obsolete, but would now be ungrammatical. The same is true of "Je croyais que ce *fût* du bas-breton" (p. 218). The expression "faire voir du pays" (p. 192) cannot be explained by any of Littré's definitions, quoted in the note, but must be taken as a jocular reference to the love which Clélie will be able to display, thanks to her familiarity with the *Carte de Tendre*.

The book, in both type and form, is excellently got up. The publishers deserve their share of praise for having given such care to a work which lays no claim to a commercial success, but will, like the former works of the same author, remain a lasting credit to American scholarship.

Geschichte von Sul und Schumul, unbekannte Erzählung aus Tausend und eine Nacht. Nach dem Tübinger Unikum herausgegeben von Dr. C. F. Seybold. Leipzig: Spirgatis. 1902. Pp. xviii, 104.

This is probably the most important communication bearing on the 'Thousand and One Nights' since Zotenberg's edition of 'Aladdin' appeared. The MS. from which the present text is printed is one in a collection made by Wetzstein at Damascus, and bought from him for the Tübingen University in 1864. There it has lain unnoticed ever since, a proof, if any were needed, that the great European libraries contain treasures of which no one dreams. Further, according to Professor Seybold, this MS. is the oldest yet found, older even than that of Galland, and dates, at latest, from the fourteenth century. What precise grounds, other than palæographical, exist for this dating he does not explain. The MS. is singular, also, in the care with which it has been written. Although by no means in classical Arabic, it has been vowelled throughout with an elaboration given usually only to Qur'ans and poetry. The vowelling, too, though aping classicality, follows, in the page of facsmile at least, the colloquial consonantal spelling. Altogether, the problem presented even by the MS. is an interesting and complicated one.

As for the story, at the beginning a number of leaves have been lost, and we are plunged into the middle of the action. There are also some other gaps, but nothing which obscures the main outline. That is simplicity itself—the adventures of Sul in search of Shumul, who has been carried off by the Jinn on the eve of her marriage to him; but it involves some episodes of marked originality. Thus, it would be hard to parallel elsewhere in any collection of the 'Nights' Sul's adventures in the desert in connection with the stolen horse: they are purely Bedawi in type, and might have come from 'Antara' or the 'Bani Hilal.' Sul's intimate relationship with monks and the generally easy intercourse between Muslims and Christians is also strange to the 'Nights,' except, perhaps, in the very different story of Masrur and Zain al-mawasif. This is so marked as to furnish a possible dating-point. The conditions are that Egypt and Syria must have been under one government, and that this government must have been most tolerant, even to the point of permitting Muslims to embrace Christianity.

Again, there is here a bit of hypnotism not to be precisely paralleled in the 'Nights.' The passage is interesting, and may be translated thus:

"And when it was the second day, he [a certain king of enchanters] had Sul brought into his presence and said to him, 'I have determined now to make use of the magic mirror [*darb al-mandal;* Lane, 'Modern Egyptians,' chap. xii.], and thou shalt behold in it of marvels that in which the understandings are bewildered.' So he took Sul by the hand and brought him to a pool of water and made him sit beside the pool. Then the king had a censer of brass brought, on which were talismans and figures, and he had a rod of bamboo in his hand. . . Then he took the rod in his hand and threw frankincense into the censer, and murmured, and moved his lips and struck the pool with the rod. And the water began to boil and bubble and roar and rumble like rolling thunder, and Sul was confused and he fainted, and sleep seized him and he slept before the king. Then the king stretched out his hand and aroused him, and Sul looked on the place where he was, and lo! it was the abode of his father and his uncle and his folk and his people, and he looked upon his tent and upon the tent of Shumul, the daughter of his uncle, and upon their cattle pasturing, and he fell fainting."

The points of likeness with other stories are not so easy to trace. There is here, as in the story of Tuhfat al-qulub in the Breslau text, a good-natured, almost comic, Iblis. The general scheme of the supernatural reminds most closely of the stories of "Judar of Cairo" and "Ali and Zahir of Damascus" which Weil translated from the Gotha MS. The description of Damascus and the wanderings in Syria have points of contact with the story of Attaf, especially as it is given in the Cotheal MS. But the originality of this story in plot and in details is more striking than any resemblances.

The question remains as to its place in the structure of the 'Nights.' That it, for example, ever formed part of any extended collection is not clear. Only a certain number of Nights are indicated at the beginning, and these are not numbered. The formula runs only, "the next night"; otherwise the tale is in the mouth of a reciter, *qala-r-rawi*, "The rawi said." Was it, then, a custom to take a story which had never been incorporated in any recension of the 'Nights,' and which there was no intention of so incorporating, and give it a certain standing or suggest its nature by adding to it some of the characteristic formulas of that collection? This hypothesis appears possible, but it would have been well if Professor Seybold had entered in his preface upon the whole subject with greater detail. The text is admirably edited, but his introduction is much too fragmentary.

Hombres y Glorias de América. Por Enrique Piñeyro. Paris: Garnier Frères. 1903.

We have read every word of this little book, attracted not more by its contents than by the spirit of the author, which breathes from the grave, humane effigy that serves as frontispiece. The smaller half consists of a rapid portrayal of the conflict between freedom and slavery in the United States during the decade before the civil war. It is marked by resort to the best authorities, and by a clear personal adherence to the winning cause, with no apologies for the crime of slaveholding; yet also by independence and candor, as may be seen in Señor Piñeyro's treatment of Sumner and Lincoln and John Brown, of Buchanan and Taney. The point of view is the struggle for the control of the Senate, on which the pro-slavery ascendancy acquired under the Constitution depended. We have found scarcely anything to criticise, unless it be a certain failure to portray the evolution of Douglas and to make his later position with reference to slavery in the Territories plain. With the abolitionists proper we have here only incidentally to do. They are characterized (on p. 84) as "el grupo de fanáticos sublimes que consagran su vida, sin soñar en premio ni beneficio personal, á la realización de remotos elevados ideales." It is erroneously surmised on page 47 that few read 'Uncle Tom's Cabin' nowadays; quite the contrary is true, and no such reason was alleged for the recent decision to drop the work from the New York city school library lists. Moreover, the story has held the *stage* uninterruptedly for half a century.

The great controversy is considered anew in a subsequent very judicious review of Morse's 'Life of Lincoln.' Motley's Letters afford another leading topic. We get a glimpse of Theodore Parker and Mrs. Julia Ward Howe in Cuba in the loving and extended portrayal of the great Cuban educator, José de la Luz y Caballero, founder of the college El Salvador; and Ticknor is praised for his discernment and scholarship in the exposure of the fraudulent 'Centón Epistolario' of Don Antonio Vera y Zúñiga. Full of interest also are the critical chapters devoted to the Argentinian patriot, General José de San Martín; the Venezuelan codifier, grammarian, poet, translator of Victor Hugo, master of the Castilian tongue, who found the sphere of his greatest usefulness and honor in Chile, Andrés Bello; and to the Cuban Tyrtæus, Heredia, who is here vindicated against the disparagement of Menéndez y Pelayo. Finally, a review of Mariéjol's 'Pierre Martyr d'Anghera' offers an opportunity to delineate this "reporter" of things American in the sixteenth century.

The fame of not one of the worthies enumerated above as flourishing in the nineteenth century, can be said to have reached this continent except among students of history, and for this reason if for no other we could wish a wide circulation of these essays of Señor Piñeyro's among those who have command of the Spanish. It will be long, we fear, before our ignorant chauvinism (rekindled by imperialistic folly) can become aware of the greatness and purity of the "hombres de América" who have shaped the fortunes of the vast continent about to be severed from ours by the international waterway. Any one who knows what are the true glories of both Americas, will feel it a privilege to reflect upon them with the aid of so enlightened a guide as our author, accustomed (to use his own phrase applied in an-

other connection) "mirar las cosas con inalterable serenidad."

Down the Orinoco in a Canoe. By Perez Triana. With an introduction by R. B. Cunninghame Graham. Thomas Y. Crowell & Co. 1903.

"Where in thunder is Bogoter?" asked an American Secretary of State, after conferring the appointment of Vice-Consul at Bogotá upon an American citizen whose ambition it was to represent his country at the capital of the South American Republic of Colombia. Mr. Cunninghame Graham, who stands as literary sponsor for Señor Triana's booklet, tells us, in a brightly written preface, that Bogotá to-day is "without doubt the greatest literary centre south of Panama"; and that "in Bogotá more serious literary work is done during a month than in the rest of the republics in a year." It is, he says, "in a way a kind of Chibcha Athens." So the literary lights of Lima, Caracas, Rio de Janeiro, Buenos Ayres, and Santiago—to say nothing of those of Georgetown, British Guiana—must pale their ineffectual fires before the brilliancy of the capital of a state which beats even Venezuela in the frequency of its bloody revolutions. In a fit of sweet reasonableness, Mr. Cunninghame Graham admits the soft impeachment of his generation, that he is himself eccentric, and, judging from the book before us, we cannot but think his affectation about Bogotá somewhat peculiar.

'Down the Orinoco in a Canoe' is an unsatisfying and disappointing performance. The title is altogether misleading, for there is very little about the Orinoco in these pages. In fact, in chapter xix., the writer candidly admits that he brings "no new or useful contribution from a scientific point of view." To make amends, he proceeds to give (p. 238) information about the Orinoco taken from a paper by Col. George Earl Church, which was published in the *Geographical Journal* for April, 1901. There is more about the Meta, a tributary of the Orinoco, than about the Orinoco; but all that was worth saying about both rivers might have been told in a short magazine article. Fleeing from one of the ever-recurring revolutions that afflict the republic of Colombia, Mr. Triana, who is son of a former President of that highly polished state, thought it would be safer for him to take flight by a sort of back door to his native land, instead of going to Panama or Colon. He hurried across country till he struck the River Tua, by which he reached the Meta in four days. After several days' journey on the Meta, he struck the Orinoco two days after leaving Santa Catalina. Some part of the journeying on this great river was done, not in a canoe, but in "a one-masted schooner," presumably a sloop. At Bolivar a steamer was taken as far as the British island of Trinidad. A few natives and some alligators were seen; but story there is none to tell. Mr. Triana is evidently an educated gentleman who is a bit of a philosopher, but his book is a mere pot-boiler that will hardly add to the literary fame of Bogotá.

BOOKS OF THE WEEK.

Agnus, Orme. Sarah Tuldon. Boston: Little, Brown & Co.
Alice Freeman Palmer. Houghton, Mifflin & Co. 75 cents.
An English Garner: (1) Social England Illustrated: A Collection of XVIIth Century Tracts, with an Introduction by Andrew Lang; (2) Critical Essays and Literary Fragments, with an Introduction by J. C. Collins. E. P. Dutton & Co. $1.25.

BOSTON and NEW YORK

A Unique Book

Kutner's Commercial German, $1.00

By ARNOLD KUTNER, High School of Commerce, New York City

A complete course in German for commercial students, furnishing much information which will be useful in business life. It is the first attempt to introduce American students to a foreign language by means of its commercial vocabulary, and contains not only the elements of commercial German, but also reading lessons, grammatical tables, exercises on grammar, and reading selections dealing with German business customs and institutions. Special attention is given to the study of commercial correspondence, business forms, documents, newspaper articles, and advertisements.

AN EDUCATIONAL DIRECTORY.

I.—*The Nation* stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in *The Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

JUST PUBLISHED

On the "Polar Star" In the Arctic Sea

By H.R.H. the Duke of the ABRUZZI

TWO LARGE OCTAVO VOLS., $12.50 net

The Polar Record Broken

A book of Surpassing Interest, eagerly anticipated by a large number of readers the world over. The expedition reached a point Farther North than any band of explorers has ever done.

HANDSOMELY PRODUCED IN 2 LARGE OCTAVO VOLUMES. ILLUSTRATED WITH 16 PHOTOGRAVURES AND OVER 200 PHOTOGRAPHS, TAKEN BY THE DUKE HIMSELF THE ILLUSTRATIONS INCLUDE THE FAMOUS MAP BY CAPTAIN CAGNI, GIVING HIS ROUTE WHEN HE PENETRATED TO 86° 34' NORTH LATITUDE.

From The "New York Times."

"Its pages not only contain an account of the little happenings of a little world in which all social barriers, save those of naval discipline, had been dispensed with, but also the conversation of members of the party, the suggestions, comments, and criticisms of various projects which might have meant so much had they been carried out. Written on the spot, this journal readily conveys to the reader the emotions experienced by the party on the return of the successful sledging expeditions. Like the assembly on the 'Stella Polare,' the Duke's readers are taken into his confidence, and become, perhaps, even better acquainted with him than were the members of his crew. The book is sure to possess intense human interest as a document by an enthusiastic explorer, who, incidentally, is a member of the royal house of Savoy."

THE book is written in a thoroughly enjoyable manner; bright, vivid, conversational. It presents a wonderfully interesting story in an easy, picturesque style. Much curious information is given, as regards sleeping bags, methods of wearing arctic clothing, the amounts and kinds of food to be eaten in arctic regions, besides the narrative of the voyage itself. Captain Cagni gives his own account of how he reached the farthest point north. Doctor Cavalli gives some remarkably interesting information regarding the effects of the cold climate on the physical condition of the members of the expedition, together with other unusual data.

Salient Points of the Work:

The style is straightforward—unadorned; thoroughly authentic; beautifully illustrated; humorous bits here and there; no bewildering mass of technicalities.

DODD, MEAD & COMPANY
Publishers **New York**

The Nation.

NEW YORK, THURSDAY, MAY 28, 1903.

The Week.

Senator Hanna's discomfiture over the question of endorsing President Roosevelt for renomination in the Ohio State Convention next month followed upon a pretty entanglement. He is against such endorsement, though Senator Foraker and apparently a majority of Ohio Republicans are for it. But does that mean that Mr. Hanna is himself a candidate? Oh, no; we have the word of one of his most active "lieutenants" that the Senator is not a candidate—though the frank man immediately added that "some of his friends think he is." Nor must any one rashly infer that Mr. Hanna is opposed to Roosevelt's renomination. He says that he expects it, and that there will be no opposition. Why, then, did the Ohio Senator speak of the attempt to get the State Convention to endorse as a "malicious" plan of his enemies? Ah, there you come upon a subtle principle of political ethics. Mr. Hanna is not only Senator, he is National Chairman. As such he—and *à fortiori* the State which he controls—must remain neutral. If his Convention were to declare for Roosevelt, "other candidates" would be "discouraged" and would accuse Chairman Hanna of partiality. "But, Senator, we thought there were no other candidates?" At this point appears the *deus ex machina* in the person of the President himself, saying that he desires the Convention's endorsement. "Why, then, of course," says Hanna.

A suspicious number of Senators and Representatives are hovering about the postal-frauds investigation in Washington. They are there to see that none of their creatures in the Department get hurt. They are there also to see that no retrenchment shall be allowed. Even the rural free-delivery service, the appropriation for which has been overdrawn by nearly a quarter of a milion, must proceed upon its present lavish and illegal basis, the Postmaster-General declares, and Congress be asked to make up the deficit. These are the pernicious influences that threaten to make the whole inquiry abortive. We do not complain at the investigation being so long drawn out; a prolonged examination is doubtless necessary in order to uncover all the facts. But what we do find wholly out of place is the deprecatory and nerveless attitude of Postmaster-General Payne. He neither acts nor talks like an aroused executive officer determined to root out the scandals and to turn out the rascals. The situation cries aloud for a vigorous chief who will give the investigation an unmistakable edge. Complacent interviewing of interested politicians is peculiarly ill-timed. We should be glad, indeed, to see Mr. Payne show for a few moments the spirit of Robert Lowe. That statesman once objected to shaking hands with a politician (as he took him to be), whereupon the latter protested, "But, Mr. Lowe, you know me quite well." "Yes, indeed, I know you far too well, and I don't want to have anything more to do with you."

We are daily getting light upon the influence of war on national life. Mr. Heath and Mr. Tulloch have enabled us to see what happens in a great department of the Government when hostilities have begun and the usual safeguards and restrictions are done away with. Now comes the Commissioner of Pensions with the startling announcement that more than 22 per cent. of the "veterans" of the war with Spain have already applied for aid from the Government. He has not only had 65,000 applications, but they are pouring in upon him by the hundred, although it is but just five years and one month since the war began. Only about 15,000 troops, it will be remembered, were under fire at Santiago, and probably not more than 6,000 seamen and marines saw active service. Of the 65,000 applications, 57,046 come from invalids, and 8,390 from widows and dependents. At the close of 1872, seven years after the end of the civil war, only about 6 per cent. of the Union soldiers had applied for Government aid, although that war lasted five years instead of a few months. As the soldiers of the Spanish war were all carefully examined by surgeons before enlistment, it would seem that there has been a marked deterioration in the physique of our young Americans in the last forty years. Whether this be so or not, there has plainly been a marked falling off in their manhood, and a shocking increase in their readiness to apply for Government aid.

Gov. Yates of Illinois has signed the Mueller bill, granting to the cities of that State the right to own their own street railway lines and to lease them for twenty-year terms, or operate them, if they choose to do so. The Governor hesitated long, and finally acted with great reluctance, but did not care to fly in the face of public sentiment in Chicago and elsewhere, even in order to please the Chicago boss, who, after the manner of his kind, was making frantic efforts to secure undue privileges for favorite corporations. The enactment of the Mueller bill, which will forever prevent the granting or renewal of long-time street-railway franchises in Chicago, as well as in other cities of Illinois, is the work of public opinion, aroused and directed toward the accomplishment of practical, affirmative results. For years the street railway companies of Chicago have been struggling to obtain long-term renewals of their expiring franchises. Once they succeeded in securing a bill from the Legislature permitting the renewals, but the city authorities dared not act in the face of public protests. Organized bodies of citizens took the matter in hand, and as a result the next Legislature was forced to repeal the law. The Council was purged largely as a result of a public demand for the protection of the franchise rights belonging to the people.

It is a singular fact that the impulse toward municipal betterment felt strongly during the last decade in all cities has taken, in Chicago, almost to the exclusion of everything else, the form of this demand for the safeguarding of franchise rights. Thus the Administration of Mayor Harrison, vulnerable in so many other respects, has been able to maintain its power for many years because it has succeeded in associating itself in the public mind with this principle. The fight between the corporations and the citizens of Chicago has been long and bitter, but the Mueller bill, passed by a reluctant Legislature and approved by a hesitating, unwilling Governor, has easily given the victory to the people. The bill possesses many of the features of the Elsberg Rapid Transit bill, introduced in our own Legislature for the purpose of giving the city control of the subways, but defeated in the closing hours of the session. Like that measure, it provides for short-time leases of lines owned by the city, and permits municipal operation in case proper terms cannot be secured from the leasing companies. It is unlikely that the city will undertake municipal operation, though the fact that it possesses the right to do so, at its option, is expected to give it the upper hand in negotiations with applicants for leases.

Gov. Odell's account of the State finances, given in his memorandum approving the 13-100 of one mill direct tax, is satisfactory. The appropriations of the Legislature of 1903, which also received the Governor's approval, amount to a total of $23,497,442. This is $1,500,537 more than a year ago, but this sum is more than accounted for by items of extraordinary expense, so that the regular cost of administering the State

government is not heightened. A single item carries $1,300,000 of the actual increase. This amount is to be expended in providing quarters for the growing population of the insane hospitals, and is an expenditure fully justified. The additional receipts for the State resulting from the increase of the excise tax are estimated by the Governor at $5,005,750, slightly more than was expected. The surplus, instead of being depleted, will thus be enlarged during the coming year, and the suspension of the direct tax for at least two years longer is practically assured, except, of course, for the small canal-debt tax, which must still be direct under the Constitution.

Everybody will sympathize with the troubles of Lieut.-Gov. Higgins. The poor man went to Syracuse to attend the meeting of the State Fair Commission, fondly presuming that, as the second officer of the State and an American citizen, he could select what hotel he pleased. But no sooner had he got fairly settled in the hostelry of his choice than he was informed that the Barbers' Union was in trouble with the management thereof, and that he would have to leave. This was mortifying to the Lieutenant-Governor, but, of course, he had no alternative. Labor had exercised its *liberum veto*, and a mere elected official had to yield. He meekly transferred himself and the headquarters of the Fair Commission to another hotel, not under the ban of the barbers. Our chief cause of regret is that the Union was not considerate enough to tell Mr. Higgins in advance just what he had to do. It is awkward to assume the air of being your own master, and then be cruelly reminded that you are not. The next time our brave Lieutenant-Governor leaves home, the Union should provide him with full travelling directions, telling him just what railways and trolleys are not "scab," and just what inns are unionized. Then he can at least keep up the appearance of being a free man, though in reality a slave.

The spirit in which New York commemorates, this week, the story of her birth and growth, will be a good test of the character of her citizens. Celebration of a wonderful past may induce either a noble pride or a foolish vainglory. It is like going into a gallery where the portraits of our ancestors hang. They are ours, and yet not ours—ours if we cherish their example and practise their virtues; not ours if the unworthy life of the descendants casts its shame backwards upon the progenitors. So, to-day, in re-reading the marvellous annals of our great city, in going back to her remote beginnings—as the New World reckons age—in counting her towers and marking her bulwarks, we shall fail utterly of the due effect of this festal week unless we attain something better in the way of civic feeling. A large part of the city's public life has, after all, to be written in our municipal government; and how to keep that honest and worthy of no mean city should be the question asked by all of us this week. We may well felicitate ourselves that the vulgar bandit, Croker, is not here to-day to represent the city as he did at the time of the Dewey celebration. That we have at this time of celebration a Mayor who can act and speak as a gentleman, is cause, not only for rejoicing, but for high resolve. We must not allow the barbarians to overwhelm us again. We must see to it that the "great humanity which beats along the stony streets" of New York shall find its expression and safety in a government made up of our best citizenship.

Five Councilmen in a Pennsylvania town have determined to put the new libel law to the test. A local newspaper, it appears, charged them with having brought pressure to bear on a railroad company with the object of securing passes. This charge caused the Councilmen to suffer great mental pain and anguish, for which they are to demand compensatory damages. Having read Gov. Pennypacker's memorandum in approval of the libel law, they naturally think that damages should be heavy. It is not likely, however, that either town Councilmen or Governors in Pennsylvania will long be content with this sort of legal relief. Having once made a start in defence of pure patriots in office, too often sadly misunderstood, the only logical next step is to increase the penalty. The inefficiency of the new law has already been demonstrated, though it has been little more than a fortnight in operation. It is powerless to aid Gov. Pennypacker to defend himself against the storm of ridicule which has followed his approval of the bill. To bring civil suits for damages would only increase the absurdity of his position. We think that the Governor, in order to save himself, will have to secure the reënactment of the law he alluded to so feelingly, whereby he may draw and quarter cartoonists, Bishops, and others who lampoon him.

The first extensive and sweeping settlement of the labor troubles now or lately afflicting the country comes from Denver, a locality in which we should hardly have expected to find a precious example of moderation and good sense. That city, like many others, has been lately divided into opposing camps of capital and labor, and the organizations have been so complete that they have seemed to reproduce the old fable of the belly and the members. But just as the starving process was about to begin, a committee of the Chamber of Commerce and of a local labor union came together, and made a settlement which was ratified on both sides, and all strikes, lockouts, and boycotts were declared off. The dispatches say that the victory seems to be with the laboring men. It would be ungracious to deny them praise for the conciliatory mood which they have displayed, but we observe that while the agreement forbids employers to discharge workmen because of their affiliations with unions, it also permits them to employ non-union men. The other terms of settlement are equally honorable to both sides, embracing a plan of arbitration for all existing disputes in all trades whatsoever. Such an agreement is well worth studying by other cities similarly perturbed.

The collapse of the strike on the Government railways in Australia was due, as Mr. Irvine, the Premier, stated in an interview, to the overwhelming force of public opinion and the determination of the people that the Government should be supreme. Although the strikers were Government employees, they had allied themselves with a trade union which bound them to obey the orders of that organization rather than those of their employer, the State. This action was in conflict with the regulations under which they were serving. The Government, accordingly, ordered them to sever their connection with this outside society. They refused to do so, and a general strike of engine drivers and firemen followed. Parliament was summoned in extra session, and the Premier introduced a bill making participation in the strike punishable by fine and imprisonment. In his speech he said that this was not a movement for higher wages or better conditions of labor, but a deliberate and long meditated revolt against established authority, and that all other business must be suspended until the revolt was put down.

The bill provided that any employee who left work without due notice, and any person interfering in any way with employees at work, or distributing strike funds, or encouraging the strike, should be subject to the penalties of the bill. The police were empowered to enter strike meetings and disperse the people attending them. This measure was introduced on the 15th of May, and the Premier declared that he would accept no communication from the strikers but unconditional surrender. Two days later the surrender came. Before this, however, the men had begun to desert the union singly or in small groups, so that fifty trains were running before the strike was formally declared off. Of course, this strike differed entirely from an ordinary one, since its success would have been a subversion of the Government. This fact

was realized by the entire legislative body, including the special representatives of labor in the Parliament, who admitted in the debates that the position of the strikers was untenable.

The *Financial Chronicle* prints figures showing that the circulating medium has increased $114,000,000 during the past twelve months; that is, from May 1, 1902, to May 1, 1903. Reference to the details given in the Treasury reports shows that $78,000,000 of this increase consists of gold certificates, for each dollar of which a gold dollar is deposited in the Treasury. Notwithstanding this increase in the quantity of the metallic currency, there is a perceptible tremor in the stock market every time that a small shipment of gold is made to Europe or to South America. Against the increase of $78,000,000 for a single year in our stock on hand, the greater part of which has come from our own mines, the outflow, with the present movement, has been only $3,605,000 —an amount quite insignificant when measured by our total holdings or our annual increase.

There is no more refreshing reading nowadays than the debate going on between Count Reventlow and Rear-Admiral Melville as to the merits of the German battleships. The courtly and gallant Chief Engineer of the United States navy is bent on wiping out the insult to the Emperor's fleet which came from the mouth of our indiscreet hero, Dewey—or which was, at least, attributed to him. Melville chivalrously insists that the Emperor's ships are the better; Reventlow, with his lowest bow, is equally positive that they are quite inferior. "After you, Count," exclaims to-day our own polite Chief Engineer; "your ships have my pet triple screw feature, are free from luxurious fittings, and are faster." We have no idea that the worthy Count will allow himself to be put down in this way. He is, it must be confessed, a sly dog, and fears the Greeks bearing gifts. Melville, he explains, is not talking as he does to compliment Germany, but to get more and better ships at home. True enough, but if there is any other reason for Reventlow's running down his country's fleet we should like to know it. This is the real aim of all naval controversies and revelations—to show the taxpayer how necessary it is for him to put his hand into his pocket again. But if it comes to a choice between the calling of names and the friendly rivalry of Melville and Reventlow, we are quite willing to have these doughty disputants keep up their contest in compliments all summer.

M. Rouvier, the French Minister of Finance, is confronted by a deficit of nearly $25,000,000. Next year's budget threatens even increased expenditures. A vast extension of schools will be necessary, through the dispersal of the teaching orders, but it is certain other items which are causing widespread uneasiness. The "projet de loi Bertaux," containing sweeping innovations in regard to the personnel of the French railway systems and the retiring pensions of railway employees, has twice passed the Chamber of Deputies, and now waits only the action of the Senate. This alone would involve an increase in annual expenditure reckoned at about $20,000,000. Then, too, the question of State purchase of some of the principal lines has again come to the fore. To meet these prospective outlays M. Rouvier has been driven to some unusual tax proposals. France has already a cumbrous door and window tax. She has also an excessively elaborate "contribution de patente"— tax not upon total incomes, but upon trade profits so far as they can be estimated from external indications. This tax falls into three parts —a fixed duty determined by the nature of the business; a rate varying with the rent of the premises; and a sort of license duty for the specific business carried on. M. Rouvier would abolish the archaic door and window tax, and extend the "contribution de patente" to incomes in general. But an income tax based on the declaration of the individual may not, and sometimes does not, work equitably. Also, governmental assessment on the basis of purely external criteria may prove thoroughly fallacious and easily unjust. Given a government in straits for money, the appraising of personal income may exhibit an imaginative power that is fairly startling to the "contribuable." The Italian recognizes this diabolic ingenuity on the part of his Government, and makes the avoidance of it part of the education of his children. However, the latest dispatches indicate that the French Cabinet has become impressed with the virtue of retrenchment, and will in the end prefer a heroic cutting down of expenditure to either borrowing or devising yet more elaborate and searching schemes of taxation.

If the world were waiting to see automobiling of a certain sort expire of its own reckless folly, the ghastly result of the Paris-Madrid race would seem to supply the last-needed touch of horror. The dead, dying, and maimed are reckoned up as after a battle or tornado. From such disaster the State of New York has sought to protect its citizens by statutes governing the use of automobiles. The law was considerably amended at the last session of the Legislature, and now establishes three speed rates for varying conditions, as follows: in closely built sections of cities, not more than eight miles per hour; in streets where houses are one hundred feet apart, not more than fifteen miles per hour; in country highways, not more than twenty miles per hour. There are other more detailed restrictions. Within half a mile of a post-office, or when passing a person driving a horse or other domestic animal, or when passing a pedestrian, or when crossing a main highway, speed must be reduced to eight miles an hour. Not more than ten miles an hour is permitted when passing a schoolhouse between 8 A. M. and 4 P. M. For a second offence in violation of any of these provisions, an automobilist may be imprisoned for a term not exceeding thirty days and he may also be heavily fined. For a first offence a fine only is imposed. Some of these provisions have been objected to as practically impossible of observance, but as long as any owners of automobiles give evidence of such recklessness as led to the slaughter on the French highway, they must expect the most persistent efforts to hold them in check by legislation.

The idea that Oxford University may become bankrupt through the kindness of the late Cecil Rhodes will startle many people; and yet such a possibility is suggested in a recent letter to the London *Times* by H. H. Turner, Savilian professor of astronomy. Pointing to the recurring annual deficits in running expenses, he declares that either the University must increase its charges to undergraduates, or else some benefactor must come to the rescue. "Otherwise," he writes, "the advent of the Rhodes scholars will probably make Oxford bankrupt, for, of course, in an endowed university, every new student is a new expense." Although Professor Turner is doubtless guilty of some rhetorical exaggeration, the fact remains that more than one American college is struggling with a similar problem. The college spends on each student from one to two hundred dollars more than he returns in tuition fees; consequently, a large growth in numbers, without a corresponding growth in endowment, means a deficit. The establishment of scholarships, a popular form of philanthropy, adds nothing to the general resources of the college; for every student thus attracted is an additional drain upon the common fund. A new building is an impressive monument to a liberal patron, but—unless it be a dormitory—it may involve the college in considerable expense for maintenance. If, say, $2,000 is necessary for insurance, repairs, heat, light, and janitor's attendance for a recitation hall costing $100,000, the building must be endowed with $50,000 to keep it from mortgaging the income of an equal amount of the common fund. Unrestricted gifts are the greatest present need of most of our colleges.

PARTY "DISLOYALTY."

A dinner was given on Thursday evening in honor of a State Senator who has dared at Albany to bring his legislative problems to the bar of his own individual judgment and conscience; and when he declared that with his two colleagues he intended to continue this course until the end of his legislative career, he was cheered to the echo, for it seemed an amazing display of courage. A telegram from the Governor expressing, not altogether unguardedly, his friendly sentiments toward this same Senator, called for black headlines in the morning papers, and gave rise to ominous predictions of party discord and disunion. Yet the three Senators have not declared war on any principle to which their party is devoted. They are not wicked free-traders, or treasonable critics of Duty and Destiny in foreign parts. They have merely announced as their rule of public conduct two very definite propositions: first, that the will of the party is the will of a majority of the members of it, not the dictum of one man, although he be known as the boss; second, that there are many legislative measures which have no bearing upon party principles or even upon party policy, and that such bills should be dealt with on their merits, even though the private concerns of some party leader may be involved.

This does not sound like a startling or revolutionary programme. The fact that there has been so much stir about it, simply reveals the state into which we have fallen under the influence of the boss system. Senator Brown said at the dinner given to him that, as a result of this system, the legislative limb of the government had become practically paralyzed. He was quite right. Most of the members of the Legislature were mere dummies, attached to strings which were pulled from a distance. The dummies were necessary as recording machines, but they possessed no other function. The whole atmosphere at Albany was confusing, stultifying. The strings were pulled, not only by the boss, but also by a half-dozen intimates of the boss, who traded on his name and power. If they were employed by a railroad company to push a "deal" through the Legislature, they rushed to Albany and declared that the bill was "a party measure." Nobody was consulted about it, its merits were not considered, there was no conference of leaders on it, no caucus even. How it came to be a party measure, nobody condescended to explain or could explain. But the dummies obediently bobbed their heads to make the record. No bill was too local or too insignificant to become a "party measure" if properly introduced, and to vote against it was to be guilty of party disloyalty, and to read one's self out of the party organization.

The paralyzing effect of the system was not confined, of course, to the Legislature. The supremacy of the boss in the party organization depended on keeping really strong men out of it, and they were accordingly eliminated as rapidly as they developed independence or power. Voting strength on election day became a minor consideration as compared with controlling strength in the primaries. The Republican organization in New York County, for instance, by a process of elimination, has developed great efficiency in the nominating conventions, but the fact that this has been attended by a corresponding weakness at the polls has been regarded with indifference.

It was under such circumstances as these that the determined action of the three Senators became an astonishing "revolt" to the bosses, but an object of inspiration and hope to sincere party men who objected to the use of their party's name as a cloak for selfishness and bad schemes of government and administration. It represented the first entering of the wedge, and a great creaking and splitting followed. Some timid souls feared that it was making chaos of legislation, but the statutes of 1903 must have reassured them. Few legislatures in recent years have threatened so much and done so little which was vicious. And above all, a spirit of decent independence has been awakened, which is spreading from day to day. A new idea of party loyalty has been proposed and seems likely to become established. Under it, devotion to party principles constitutes the test, not services rendered in aid of the selfish schemes of the boss. Under it, also, matters and measures having no partisan bearing are left to the individual judgment and conscience.

The movement as it stands is distinctly hopeful. It is not confined to New York city, or even to New York State. There are indications elsewhere of a growing realization of the absurdity of purely partisan action on matters having no relation to party principles. Partisanship in the conduct of municipal affairs has already been abandoned by a majority of thinking people. Partisanship in matters pertaining to State government is now the subject of keen criticism. In its annual report, the Legislative Voters' League of Chicago declares that the control of the Legislature by the forces of evil in Illinois would be impossible but for the fact that the Legislature is organized on party lines. What, asks the League, have parties to do with the chief subjects which State Legislatures must act upon, such as crimes, civil and criminal procedure, regulation of corporations, regulation of railroads, city charters, charities, taxation, and the like? Shall legislatures be for ever limited in this way because twice in each six years there are United States Senators to elect? The discussion is suggestive and significant. We shall see what we shall see; but, in the meantime, we may rejoice over the destruction, which is going on before our eyes in our own State, of a false and vicious notion of obligation to party.

EMERSON THE CITIZEN.

In the course of the Emerson centenary celebrations, now full upon us, we shall hear much of the "voice oracular" which sounded in the ears of Matthew Arnold in Oxford, as well as of Moncure Conway in Virginia, and which, we would fain hope, still comes with trumpet call to eager youth. We shall be told of the skilled rhetorician, with that sure eye for the right word of which Dr. Holmes gave his amusing account, and with readiness to exalt at one time "Fate," at another "Power," in the certainty that the reader would receive, from the very antithesis and exaggeration, the due impression intended. Emerson the Philosopher will be discoursed on, and just why he narrowly failed of being a poet among the greatest will be explained. We may be pardoned if we dwell for a moment on the humbler theme of Emerson the Citizen.

His theory and practice of "the republican at home" seem to us to be peculiarly opportune. They have a pertinence to present problems. We are passing through a period when the right and duty of free, full, independent criticism of governmental and national policy and action are challenged. On the one hand, we have seen the opposition of many right-thinking men muffled because they feel that it will be of no use. On the other, we have protest hissed at as disloyalty. But all this was abhorrent to Emerson's soul. "If the motto on all palace gates is 'Hush,' the honorable ensign to our town halls should be, 'Proclaim.'" "Just now the supreme public duty of all thinking men is to assert freedom. Go where it is threatened and say, 'I am for it, and do not wish to live in the world a moment longer than it exists.'" And Emerson's civic conduct was of a piece with his teachings. He sent a strong letter of protest to President Van Buren, at the time of the unlawful and violent expulsion of the Cherokees from their own land—a letter which it is probable, as Emerson's biographer says, that the "sleek patriot" in the White House never read. No matter; the good citizen had done his duty and freed his mind. He had lived up to his own precept, as he did again at the time of the Fugitive Slave Act: "Let us not lie nor steal, nor help to steal, and let us not call stealing by any fine names, such as Union or patriotism." New England is to-day building the tomb of that prophet of the civic conscience. His successors it is stoning, as a former generation stoned Emerson.

By breeding and intellect an aristocrat, Emerson's political convictions

carried him into the party of reform and progress. Though, like Mark Pattison, he confessed his preference for living with the Whigs, he also acknowledged his desire, on principle, always to vote with the Democrats. One solemn Whig who heard Emerson lecture, in 1839, said that he could account for his enthusiasm in defence of the rights of man only on the supposition that he was angling for a place in the Custom House! It was, of course, in the irrepressible conflict with slavery that Emerson's democracy had its sharpest and most triumphant test. Beginning with a kind of philosophic and detached weighing of the terrible problem—such as Orville Dewey kept up until the very outbreak of the civil war, in sheer agony of inability to choose his side—he pressed on with such increasing definiteness and ardor of conviction that he finally espoused the cause of John Brown, saying (we quote from Col. Higginson):

"All gentlemen are on his side. I do not mean by gentlemen people of scented hair and perfumed handkerchiefs, but men of gentle blood and generosity, 'fulfilled with all nobleness,' who, like the Cid, give the outcast leper a share of their bed; like the dying Sidney, pass the cup of cold water to the soldier that needs it more."

Emerson's attitude on the question of the negro's capacity is surely worth a paragraph to-day. At first, his feet were taken in the snare which is again catching good men. "The degradation of that black race . . . is inevitable to the men they are." "The negro is created on a lower plane than the white." But that practical atheism was soon outgrown. By 1844 Emerson maintained the negro's capability, and in 1845 he described as follows the current doctrine of race inferiority:

"It is that the Creator of the negro has given him up to stand as a victim, a caricature, of the white man beside him; to stoop under his pack, to bleed under his whip. If that be the doctrine, then I say, if He has given up his cause, He has also given up mine who feel his wrong. But it is not so; the universe is not bankrupt; still stands the old heart firm in its seat, and knows that, come what will, the right is and shall be; justice is forever and ever."

It was, then, Emerson the patriotic Citizen who would not sit silent when base deeds were being done in the name of country. He stood for free speech and free men. No partisan, he yet was ready to sacrifice himself when the cause was good. It was a part of his religion to see that the land was well governed. Far from approving or practising the fastidious indifferentism of too many highly educated men of his time and ours, Emerson believed that a care for politics is as great an interest as a rational being can have. His fine example of civic duty is no small part of his contribution to the strength and greatness of this nation.

CHAMBERLAIN'S REACTIONARY PROTECTIONISM.

The later utterances of Mr. Chamberlain place him squarely on the protectionist platform. In a speech on Thursday he told the working classes that preferential tariffs would mean three or four times their present wages; and in the House of Commons on Friday night he said that the proposed tariff would furnish means for old-age pensions. Mr. Chaplin and the agricultural societies expect that the tariffs will raise the price of cereals, and that, too, is a part of Mr. Chamberlain's expectation. So Mr. John Bull is to pay higher wages for labor and higher prices for food, and his net profits are to be so increased by the operation that he can pension all needy people who are above sixty years of age. But, it may be asked, is not Mr. Chamberlain's policy sanctioned by experience on this side of the water? Why cannot John Bull do what Brother Jonathan has been doing with such conspicuous success these many years? The first reason is that J. B. is not exploiting a new country whose resources are so great that waste and bad economy may, for a long time, go hand in hand with great prosperity. Another difference between the two countries which is not sufficiently observed is, that we have a larger and more compact free-trade area than Great Britain has or can have. The exchange of products between any two sections of the United States (not counting colonies) can be effected within a few days at slight cost of transportation and without customs duties. Such economical advantages were never before seen in the world. They overbalance the waste of protectionism which would severely pinch any country that has to import the larger part of its raw materials and food supplies, as England does and must increasingly continue to do.

In the mutations of English politics that would accompany any deviations from the principles of free trade, Lord Rosebery has been reckoned as one of the Liberal chiefs (perhaps the only one) who might possibly side with Mr. Chamberlain. He took occasion on Monday, however, to define his position and to place himself in accord with the views expressed by the Prime Minister, rather than with those of the Colonial Secretary. In a speech at Burnley, he said that, while he did not consider free trade as a part of the "Sermon on the Mount," he would not favor a change without long and deep consideration. "We must consider," he said, "whether it would be judicious to quarrel with customers who give us two-thirds, or possibly three-quarters, of our trade in order to oblige customers who give us a quarter or a third of it." He thought that, before the tariffs were changed, the colonies ought to be represented in the government of the country. This idea is contrary to Mr. Chamberlain's scheme as presented at the Colonial Conference in London last year. In that programme, the plan of preferential trade came first, and was presented as a means of cementing the Empire in a political sense. The Colonial Premiers agreed to recommend to their legislatures certain changes in their tariffs favorable to the mother country in the event that the latter should adopt tariffs discriminating in their favor.

The one thing wanting in Mr. Chamberlain's plans is a detailed scheme for carrying them into effect. Imperial Federation is a sounding phrase. It can be made attractive to a mixed audience by a speaker of Mr. Chamberlain's versatility, who deals with it only in general terms. An effective picture can always be drawn of Britannia and her children assembled together at a Christmas dinner; and if anybody, at such a time, should ask who pays for the dinner, he would be considered a sordid wretch or an unfeeling monster. But the Christmas dinner which Imperial Federation stands for is a continuous feast (or famine), and the question who pays for it is the principal, if not the sole, point to be determined by the participants. Sir Robert Giffen directed attention to this phase of Imperial Federation while the Conference was sitting last year. He noted the fact that no details of preferential trade had been laid before the conferring Premiers; and since the success of the project depended upon a satisfactory adjustment of separate items, he presented a partial list with a clear view of the difficulties to be faced. Sir Robert is by no means a Little Englander. He is a hard-headed Scotchman, who believes that no scheme of preferential trade will work unless it can be reconciled with the facts of daily life, and that Little England with pounds, shillings, and pence to the good is better than Imperial Federation with those factors on the wrong side of the ledger. We have never seen any attempt at a reply to Sir Robert's argument.

After the Conference had adjourned, Professor Bastable, the eminent writer on finance, took up the discussion on somewhat broader lines. He showed, in the first place, that a Zollverein for Great Britain and the colonies was impossible for geographical reasons. The only unions of this kind that had ever been carried into successful practice had been those of adjacent territory, around which the barrier of a common tariff could be drawn. Replying to the suggestion that, although an Imperial Zollverein could not be adopted in the form given to it by the independent states of Germany, it might still be adopted in substance, he showed that the differences of products are as great as those of geographical situation. Diversities so marked as those of India, South Africa, Australia, Canada, and the United King-

dom never could be made amenable to a common tariff. Therefore, the idea of a Zollverein, either in form or in substance, must be abandoned. Nor can anything in the way of preferential trade be found to take its place unless England squarely turns her back on her past and present conceptions of trade, and adopts a new one, the central idea of which is that the exchange of goods with British subjects is better than exchange with foreigners. Replying to Mr. Chamberlain's argument that the British Empire is so wide and its products so various that it might be self-sustaining, Professor Bastable pointed out that the main question was not that of self-sufficiency, but of cost. It is aside from the question to say, for example, that British colonies can produce all the cotton that England needs, unless it is shown that they can and will supply it as cheaply as the United States does.

If Great Britain is to adopt preferential duties in favor of her colonies, there is no reason why she should not adopt the same policy towards favored nations which are not united to her by political ties. Whenever she begins to discriminate among nations, she will have to discriminate also among producers at home. The agricultural interests represented by Mr. Chaplin will be as much opposed to free imports from Canada as from the United States, and, as Lord Rosebery pointed out in his speech at Burnley, there could be no such thing as a finality in tariffs, because the colonies would be constantly insisting on changes. In short, Mr. Chamberlain's scheme is so beset with difficulties in the United Kingdom itself that foreigners need give themselves little concern about its realization in practice.

THE GERMAN MERCHANT MARINE.

In a recent number of the *Fortnightly Review*, there appeared an article upon the growth of the German merchant marine. It is well worth the attention of all who are concerned with the development of our own mercantile fleet, since in the means taken to increase the number of ships flying the German flag there are several lessons which our American shipowners could study with profit.

Primarily, Germany has not hampered her commercial navy by any restrictive laws forbidding the purchase of vessels abroad, as is the case in the United States. Writing upon this point in *Nauticus*, several years ago, a German authority cited this country as being the last nation to stick to that antiquated policy, and rightly attributed to it, in a large degree, the failure of the American shipowners to regain their old position after the losses of the civil-war period. In Germany to-day, as with us, all materials intended for shipbuilding purposes are admitted duty free. There is not even the restriction prescribed by our own laws, namely, that the exemption from duties shall not apply when the vessels constructed of imported materials shall engage in the coast trade for a period of more than two months in any one year.

Except for some liberal postal subsidies, the German shipowners "in the main stand upon their own feet, and the support given us by the Government is repaid by us through the efforts we make to promote trade and traffic," to use the words of the head of the North German Lloyd, at the launching of the *Kaiser Wilhelm II.*, which has just arrived in this city for the second time. The subventions paid by the Empire to the North German Lloyd, the Hamburg-American Line, and the German East Africa Line, aggregate 7,500,000 marks, or, roughly, $1,800,000 annually. In return the several companies pledge themselves to maintain certain lines, to prepare their steamers for use in war time as auxiliary cruisers, and to carry the mails. There are plenty of Germans who do not believe in this policy of establishing steamer communication with out-of the-way places in advance of a commercial need, though they favor the very appreciable preferential rates given by the German Government railways to all articles used in shipbuilding. It must be said, however, that from the very beginning the attitude of the German shipowners has been far more self-respecting and independent than that of our Griscoms and Cramps. Certainly such open lobbying and such unblushing demands for enormous bounties on both tonnage and speed as we have witnessed in this country, have not been known in Germany.

The real secret of the success of the great German steamship companies is to be found in the words of the first chairman of the North German Lloyd Company. He declared in June, 1858: "We cannot count on assistance from the State; we must rely upon our own energy, work and judgment, coupled with suitable economy." This self-reliance is as marked a characteristic of German shipowners as is the thoroughness with which they, and the Government behind them, go about everything. While the companies have built better and better ships, and have extended their lines with remarkable enterprise, the Empire and the subordinate governments have improved harbors and docks, deepened the mouths of rivers, built canals, improved the lighthouse service, passed properly drawn laws in regard to the treatment of sailors, their food, the qualifying of officers, and the inspection of vessels. Under the personal direction of the Emperor, whose love for the water and whose interest in yachts and yacht racing have done so much to arouse popular interest in the merchant and military fleets, the Government has met shipowners and shipbuilders halfway in every case where it was possible. As a result, the pride of the nation in its marine power is great and deeply rooted. This is in itself a tribute to the foresight of the Government.

There is good reason for Germany's pride in her merchant marine. In 1870 Hamburg possessed only 37 steamers, with a tonnage of 191,000, while Bremen had but 27 of 171,500 tons. In 1898 these same harbors respectively sent out 377 and 259 steamers of 715,450, and 487,230 tons. In 1873 there were but 217 steamers flying the German flag; in 1899 there were 1,223, of more than a million tons. Whereas, in 1873, steamers of any size had to be purchased abroad, the German yards turn out to-day the fastest ships of the largest size—at least one of which, the *Deutschland*, is constructed entirely of German steel. In 1899, 69.6 per cent. of the imports and 66.3 per cent. of the exports of Germany were carried in German bottoms. From 1894 to 1899 the total shipping business increased more than 44 per cent. The recent bad times have, of course, had a depressing effect upon it, as they have upon other industries. But the prospects of the present year are again encouraging.

Among the largest companies, in addition to the Hamburg-American and North German Lloyd Lines, may be mentioned the German fleet of the Standard Oil Company, the German-Australian Company, the Woermann, the Hamburg-South American, the Kosmos, the Hansa, the Neptune, the Rickmers, the Argo, the Triton and Visurgis lines, whose ships visit every quarter of the globe. In the Mediterranean, as in the Orient, the competition of the German vessels is making itself keenly felt in English shipping circles, in which the purchase by Germans of three Chinese lines owned by Englishmen caused a feeling closely akin to consternation. Taken altogether, this brief summary of thirty years' surprising progress shows clearly that no nation can hope to maintain or to acquire the supremacy of the ocean without reckoning with the Germans of the North Sea.

THE FÊTES AT DELPHI.

ATHENS, May 3, 1903.

The termination of the ten-years' excavations upon the site of Delphi, by the French Archæological School at Athens, and the ceremony of the official handing over of the site to the Greek Government and of the inauguration of the new Museum there, were the occasion of a brilliant fête at the famous sanctuary yesterday. The occasion was indeed one which merited a fitting celebration. The renown in antiquity of the great Delphic sanctuary of Apollo, the interest with which, for the last ten years, the whole civilized world has been following the labors of the French excavators, the brilliant discoveries which have crown-

ed their efforts, the large sums of money expended in this truly disinterested work by the French Government, the assembly of scholars and notable personages from many lands to witness the final celebration —all served to render the occasion an impressive one, while the stupendous scenery of Delphi and perfect weather lent enchantment to the dramatic scene for which Delphi is well fitted. Strabo's comparison of it to a theatre has often been quoted, yet his phrase, though accurate, gives no conception of the real setting, the tremendous twin-cliffs which tower over the sacred precinct, the majestic snow-topped mass of Parnassus rising behind them more than 8,000 feet into the cloudless air, the deep glen of the Pleistos beneath, through which the torrent rushes, the precipitous rocky slopes of Mt. Kirphis opposite, the broad Crisæan plain spread out far below with its olive groves and bounded on the south by the blue waters of the Gulf of Corinth and the long mountain ranges of the Peloponnesus with their snowy peaks. It is a picture which no one would attempt to describe, but without a reference to which no account of Delphi, however slight, would be possible, for it was this extraordinary combination of natural features, striking awe and wonder to the beholder's mind, which caused it of old to be regarded as in very truth the seat of a Deity.

A brief review of its history may not be amiss here. Tradition connects the name of Delphi (from δελφίς, a dolphin, according to one etymology) with the legend of Apollo transformed into a dolphin, accompanying and guiding the ship which brought Cretan settlers to this shore; and the abundant traces of Mycenæan remains found in the course of the excavations seem to confirm this early connection with Crete. Homer calls it Pytho, and this name connects it with a still earlier time, when the first deities of the place were dispossessed by Apollo, who slew the guardian dragon Python. But, from the ninth century B. C., the fame of the Oracle of Delphic Apollo was fully established, and continued until its abolition by Theodosius, *circa* 385 A. D., though its influence had greatly declined some centuries before. Its rich treasures always exposed Delphi to the attacks of enemies. Thus, Xerxes attempted to invade it in 480 B. C., but was repulsed, as Herodotus tells us, by the god himself, who manifested himself in thunder, while at the same time enormous boulders from the cliff came crashing down upon the pass, routing the Persians utterly. The same thing happened again two centuries later, when, in 279 B. C., Brennus and his Gauls attempted to enter Delphi by the same road. In the early sixth century B. C., the great Temple of Apollo was destroyed by an earthquake, and was rebuilt by the Alcmæonidæ of Athens. It was destroyed again in the fourth century B. C., and rebuilt by a general subscription from all the states of Greece. This was the temple seen by Pausanias, the foundations of which are still standing. It was plundered several times, by the Phocians in 356 B. C., by Sulla in 86 B. C., and again by Nero, in a fit of rage at the Oracle's disapproval of his matricide. Constantine the Great carried off several of its treasures to Byzantium, and the bronze pedestal of the Platæan trophy may be seen in Constantinople today.

Thus the work of the French excavators was one of faith, not knowing to what extent their great outlay of money, time, and labor would be repaid by the results, or how much of the famous sanctuary would still be found to exist. The excavations have, however, amply rewarded them. The wealth of inscriptions, monuments, and sculptures brought to light has proved beyond their highest expectations. To describe in detail even the more important finds would exceed the limits and scope of this article; suffice it to say that they comprise offerings to the Oracle from every part of the ancient world, from Phrygia and the Scythian steppes to the Gates of Hercules and the shores of Africa, and from private individuals as well as states all over Greece; magnificent buildings, statues, columns, and altars, erected by great princes and states, side by side with the thousands of rude votive images and inscriptions dedicated by the poorest and the humblest; an exhaustive epitome of the life of antiquity, with its ambitions, its quarrels, its hopes and fears, through more than fifteen centuries. From the earliest mythical times down to the days of Julian the Apostate, humanity sought enlightenment, consolation, and help from the lips of the Pythian prophetess of Apollo; and throughout this long period her commands were obeyed and her priests wielded a political power similar to that exercised by the Church of Rome over Catholic Europe in the Middle Ages.

The results of the excavations are briefly as follows: The sacred precinct has been laid bare, a large irregular quadrangle lying upon the steep hillside, with gates at intervals in its walls, the main entrance being at the southeast corner, opposite the Castalian Spring. From this gate a Sacred Way, paved and lined on either side by votive buildings, statues, etc., leads up in winding curves to the great Temple of Apollo, of which only the substructions now remain, revealing the adyton, or subterranean chamber where the oracles were delivered. Before the temple stood the great Altar of the Chians, dedicated in the fifth century B. C., but the excavations around it proved that it had been a place of sacrifice from a remote age, the soil being composed of regular layers of Mycenæan, geometric, proto-Corinthian, Corinthian, and later pottery, in fragments, mixed with the ashes of animals and votive offerings in bronze. Above the Temple stood the Theatre, one of the best preserved in Greece; the Lesche, a building mentioned by Pausanias as containing two celebrated series of paintings by Polygnotus; and at the very top of the precinct the Stadium, commanding a fine view, and in fairly good preservation. The most important of these buildings, from the artistic point of view, are the Treasuries, in the form of little temples *in antis*, erected by various cities for depositing their offerings, and richly painted and decorated with sculptures. All are now in ruins, but so many of their fragments have been recovered that it has been decided to rebuild one of them, the Treasury of the Athenians, a trophy of the Battle of Marathon, which occupies a prominent position upon the Sacred Way, and will be, when finished, as beautiful a feature of the Delphic sanctuary as the exquisite little temple of Wingless Victory at Athens, restored in a similar way, is of the Acropolis. Just beyond this Treasury stand the Rock of the Sibyl and the Stoa of the Athenians, whose wall is covered with hundreds of inscriptions recording the emancipation of slaves, under the form of a sale to the Pythian god.

In the Museum the bas-reliefs and other sculptures belonging to the Treasuries of the Cnidians, the Sikyonians, and the Athenians are among the chief ornaments, others being the tall votive column of the Naxians, surmounted by a sphinx; the richly carved Omphalos, or stone which was supposed to mark the centre of the earth;* the famous hymn to Apollo inscribed upon a marble slab with musical notation; the charming Acanthus Column, surmounted by a group of three life-size dancing figures, a work of the fifth century B. C.; the votive statues of various kings and heroes; and, finally, the gem of the collection, which of itself would justify the entire excavation, the bronze statue of a charioteer of the greatest artistic beauty, dedicated by Polyzelos, brother of the tyrant of Syracuse, and probably set up between the years 478-472 B. C. No idea can be given, in this cursory and incomplete notice, of the treasures either in the Museum itself, or *in situ* in the precinct; but the large work upon Delphi soon to be published by M. Homolle and his collaborators will fully supplement our still imperfect knowledge of the finds.

In view of the part taken by the French Government in the excavations at Delphi, the presence of the French Minister of Education and Fine Arts was indispensable at the ceremony of making over the site with its finds to the Greek Government. Accordingly, the Minister, accompanied by several other officials, arrived in Athens some days ago, as the guest of the French School. On April 30 a garden party in his honor was given in the grounds of the school, at which his Majesty and several other members of the royal family of Greece were present. The famous Hymn to Apollo discovered at Delphi some years ago was given by the orchestra and three ladies concealed by a screen of foliage, while in the foreground meanwhile a tableau was enacted, reproducing from an ancient vase-painting Apollo Musagetes striking his lyre and surrounded by his choir of nymphs. An ode to Greece was also recited, and an ode in honor of M. Homolle, the distinguished director of the French School, to whom the excavations at Delphi are chiefly due.

The French Minister's stay in Athens was marked by a series of dinner parties and dances given in his honor by the members of the Greek Government, ending with a state dinner at the palace, after which the same evening the French party left for Delphi by the French man-of-war *Condor*, accompanied by a Greek gunboat. The yacht *Assos* had in the meanwhile set out with a large number of invited guests on board. They arrived at Itea the next morning, May 2, reaching Delphi at 10:30 A.M., when the ceremony of inaugurating the Museum began in the Hall of the Cnidians, where a beautiful facsimile of that Treasury has been erected. Speeches were made, first by M. Mavromichalis, Minister of Education and Fine Arts, representing his Majesty and the Greek Government, in whose names he thanked the representative of France for the great service it had rendered the cause of

*This, of course, is not the real Omphalos, which stood in the temple, but merely a votive offering in the precinct.

archæology and the Greek nation in supporting this important undertaking, and extolled the enlightened liberality of the French Government in everything that concerned science and art. He was followed by M. Homolle, who gave a rapid résumé of the excavations of the last ten years at Delphi, as well as of former labors upon this site. He stated the expense to have been 500,000 francs, and referred with gratitude to M. Bourgeois, the French Minister under whom the work was begun. He then thanked with his customary grace the representatives of his Majesty and of the Crown Prince as President of the Archæological Society of Greece, the Greek Government, and the archæological authorities, for the moral support they had extended to the undertaking, and the interest they showed in being present at the final ceremony. He expressed his thanks also to the French Minister of Education, the French Ambassadors at Athens and Constantinople, the directors of the various foreign Schools of Archæology, and the representatives of other learned bodies, speaking of their presence as a world-wide recognition of the importance of the Delphic excavations. He made special mention by name of two of the workmen, to whose devotion and skill the excavations owed much, and paid a tribute to the generous giver of the Museum, the late M. Syngros. He next referred to the decision of the City Council of Athens to defray the cost of reërecting the beautiful Treasury of the Athenians on its original site, regarding it as a kind of ancestral obligation and privilege. He then formally gave over the site, saying:

"I hand over to the Greek Government the legacy entrusted to me for the past ten years. The work began in April, 1893, and ended in April, 1903. I trust the time has proved fruitful. This hour is a memorable one to me. I resemble a father about to give his daughter in marriage, and experience similar feelings with regard to a site where we have worked for ten years and have experienced the deepest and purest emotions of discovery and scientific research, and you will therefore not misunderstand me when I recommend Delphi to your protection. She will always be for us a witness to the ancient glory of this land, a monument to the scientific devotion of the French School of Athens and of its gratitude to this hospitable country, an indissoluble bond uniting France and Hellas."

M. Cavvadias, General Ephor of Antiquities, then replied in the name of his Royal Highness the Crown Prince and of the Greek Archæological Society, whose congratulations and thanks to the French Government and to the French School of Athens he transmitted. He paid a warm tribute to the distinguished director of the school, to whose eminent achievements as a savant and executive ability, devotion, and enthusiasm the long and arduous work at Delphi with its brilliant results was due. He spoke of France, her recognition of Hellenic ideals, her generous readiness to respond in the cause of art and letters. He spoke of the Greek Archæological Society, founded in 1837, its recognition of its high mission and of the part taken therein by the sister schools of archæology at Athens, as attested by the long list of their labors and triumphs, which had reflected credit and glory upon their respective countries and opened a distinguished career to many of their young countrymen.

The French Minister of Education next spoke briefly, referring to the ethical teachings of the occasion, inspired by the traditions of the place. He was followed by M. Carapanos, Minister of Marine, in his capacity as Member of the French Institute and as a lover of antiquity—titles to which he has earned the right by his own important excavations upon the site of Dodona, the valuable results of which excavations he presented last year to the nation, and which now fill an entire hall in the National Museum at Athens. Speeches were then made by the representative of the French Academy of Fine Arts, by the Director of Higher Education in France, by the directors of the various foreign schools of archæology at Athens—Prof. R. B. Richardson in behalf of the American School and of the British School, Dr. Schrader in the name of the German Institute in the absence of Professor Dörpfeld, Dr. Adolf Wilhelm as director of the Imperial Austrian Institute at Athens.

The new Museum, with its various treasures, was then inspected by the visitors, after which the party assembled in the theatre, where a collation was served and toasts were drunk, while groups of picturesque peasant girls and youths danced to the music of the pipes. The scene was one of the greatest enthusiasm. After lunching, the party repaired to the Stadium, where foot races were run and prizes distributed, after which they returned to the Museum, where M. Mavromichalis, standing upon the steps, thanked the inhabitants of Delphi for the order, hospitable zeal, and enthusiasm which they had shown, the peasants replying with hearty cheers. The whole party then drove down to Itea, and embarked for Athens and Constantinople.

Thus ended one of the most memorable days in the annals of the French School of Athens, a day which, as Professor Richardson said in his speech, was one of mutual gain and rejoicing to the sister schools at Athens, as well as to the world. France has set an example, in this great work and throughout the past, which may well be emulated by other countries, and has been emulated notably by Germany at Olympia and in many minor instances. The treasures of Greece are far from being exhausted. Every day new proof is given of the riches lying beneath her soil and only awaiting the spade of the excavator. American ability has already won recognition in this field, the only hindrance to its labors being the want of funds by which it is constantly hampered. Its School alone of the foreign schools at Athens has not the support, direct or indirect, of its home Government; and in spite of many generous gifts from private individuals, it still awaits its Mæcenas who will enable it to undertake a work upon the scale of Olympia and Delphi. When one reflects that the American School had virtually the refusal of Delphi for nearly a year, during which it was found impossible to raise the necessary funds, one feels that it ought to be spared such a loss in future. As regards the French school, it is not resting upon its laurels. M. Homolle recently announced that a gift of 30,000 francs from the Duc de Luynes, with the promise of more later, would enable the School to go on with the important excavations at Delos, interrupted for many years for lack of funds, but now assured of completion. He is to be congratulated upon this realization of one of his most cherished schemes—a fitting tribute, as all will acknowledge, to the perseverance, energy, and ability of which he has given such proof in the accomplishment of the work at Delphi.

DEMETRIUS KALOPOTHAKES.

NAPOLEON'S BROTHERS.—II.

PARIS, May 6, 1903.

The Kingdom of Westphalia was an artificial creation of the Emperor Napoleon. It was, so to speak, a gift to his younger brother, Jerome. A life of Jerome has just been written by M. Joseph Turquan, who continues his already long series on the members of the Bonaparte family and the great ladies of the time of the Empire. I would not for a moment compare his work with that of M. Frédéric Masson; and it was by accident that I read his volume on King Jerome (which is a pamphlet and a running satire) while reading the historical studies of M. Masson.

Jerome's quarrels with his brother Napoleon are well known; the history of his marriage in America, of Napoleon's opposition, of the marriage with a Bavarian Princess, and of the reconciliation with the Emperor is familiar to everybody. M. Masson takes Jerome in the year 1809, when he had entered fully into Napoleon's views. Jerome, as long as the war with England lasted, was to furnish the support of 12,000 French soldiers. He had besides to keep an army of 12,000 men of his own. He was allowed to institute an order of his own, so as to have all the apparent prerogatives of sovereignty. In January, 1810, Jerome and his wife Catherine returned to their States. He asked his brother to add Hanover to his kingdom, but Hanover seemed to Napoleon too big a piece; he half promised it, but regretted his promise, and contented himself with giving his brother a little more territory with 796,000 more inhabitants. The weak point of the artificial kingdom of Westphalia was the financial question. Jerome accepted all the heavy charges with which Napoleon encumbered the new kingdom; he was personally very extravagant, and maintained his court with as much pomp as if he were the sovereign of the richest country in the world. In reality, the kingdom was poor and had suffered much from the war. The new kingdom was divided into eight departments, bearing names now well forgotten. The King made a solemn entry into Cassel, a very sleepy and quiet little town, which had been promoted to the dignity of a capital. He chose ministers: among them was Beugnot, who was charged with the finances (Beugnot's memoirs are a very valuable document for the times of the Revolution and the Empire); M. Siméon had the Department of Justice and of the Interior; Gen. Lagrange the War Office. He gave to his Secretary Lecamus the title of Count of Fürstentein, with the estate of that name, which was worth 40,000 francs a year. Napoleon wrote to him on this subject:

"I see that you intend to give the estate of Fürstentein and a revenue of 40,000 francs to Sieur Lecamus. I know nothing more insane than this conduct, alike contrary to your interests and detrimental to the State and to yourself. This man has rendered no service to the State, only to yourself. . . . Since I began to reign, I have never con-

ceived so arbitrary an act. There are more than ten men who have saved my life, and to them I give pensions of only six hundred francs. I have marshals who have gained ten battles, who are covered with wounds, and who have not the reward which you give to this Lecamus. . . . What shall I give to Marshals Berthier, Lannes, Bernadotte and to more than twenty persons who have bought with all sorts of wounds the throne on which you sit? I have ministers who might have gained ten millions and who have not a sou. What finances will you have with your sort of conduct? You spend three millions in Paris in two months; you will spend thirty in less time without rhyme or reason."

This language did not make the slightest impression on Jerome; he was as extravagant as his brother was strict and correct in money matters. Ever since the time of the Directory, Napoleon had had a genuine horror of speculators and army contractors; his love of order and regularity in the finances is one of the remarkable traits of his character. Jerome's ministers were in a difficult position; they knew well what Napoleon expected from his brother, with whom they accordingly remonstrated, but they were his subordinates. It was the same with the honest but timid Reinhard, who was the representative of France at Jerome's court. The memoirs of Madame Reinhard, lately published, give us some light on the life led at Cassel. Reinhard's official dispatches to Napoleon, though couched in a guarded, diplomatic style, are very well worth perusing.

Favoritism, financial extravagance, excessive prodigality characterize King Jerome's short rule in Westphalia. They ought not, however, to hinder us from recognizing the progress which was made in this new State.

"Thanks," says M. Masson, "to M. Siméon and to the good assistants he brought with him, the principles of the Revolution were so largely applied in the kingdom that this aggregation of States, the most backward in Europe, the most brutally treated by their masters, those in which the barbarism of the middle ages had remained almost intact, received in the course of two years the institutions of the most civilized country. The Code Napoléon was definitively introduced; estates became freehold; serfdom was abolished; tithes were bought in; feudal rights were suppressed; the code of legal procedure was established; the correctional police was administered through juries; the mortgage system was instituted; the fees of the tribunals were fixed; freedom of worship was recognized; the taxes were administered as they were in France; the prefectoral and municipal administrations were copied after the French model, and were rendered more liberal. Into countries where feudal despotism disposed of the lives and property of all, passed the great current of modern ideas, the ideas of equity, equality, responsibility, individual liberty."

M. Masson justly adds that this work, accomplished by French lawyers, will make history more indulgent towards Jerome, even though he cared nothing, perhaps, for the judgment of history, and was completely given over to pleasure and vanity. When he paid visits to his brother there were sometimes terrible scenes, showing the latter's discontent. Once, at Compiègne, the Master of the Horse of Westphalia, Minister of War, Captain of the Guards, named Morio de Lisle, joined Jerome. Morio de Lisle had left Cassel to command the Westphalian troops in Spain; falling ill, he had been transported to Perpignan, and from there to Montpellier, whence he went straight to Compiègne. He appeared before Napoleon, covered with orders and in perfect health. The Emperor stopped before him: "What are you doing here?" "I accompanied the King." "Who are you?" "The *Grand Écuyer*." "*Grand Écuyer!* minister, general! Who gave you those stars? Where did you earn them? You dishonor the epaulette. Leave off those epaulettes. You are a coward." This scene took place at the time of the marriage of Napoleon with Marie Louise.

On his return to Westphalia, Jerome made a visit to the provinces which had been added to his kingdom. Establishing himself at Herrenhausen, which is at a short distance from Hanover, he received the homage of his new subjects, held reviews, visited cities. He wrote to his brother that he had everywhere been received with enthusiasm; he developed great plans for a canal between the Elbe and the Weser, and asked at the same time that the burdens of war should be made lighter in his kingdom. Napoleon took very little notice of this last request, and wrote to him in answer:

"I have just ordered that my troops shall occupy all the country from Holstein to Holland, and this measure comprises the country between Bremen and Wilhelmsburg; I beg you to withdraw your troops from it. The mouths of the Elbe, the Weser, the Jade are just now the subject of my most important meditations; a division of my Dutch ships is going to visit that coast; it is necessary that the country should be in the hands of the French generals."

Jerome evidently wished to have the coasts of the German Sea; he saw them in the hands of Davout, his enemy, the sternest executor of Napoleon's orders. Davout established his headquarters in Hanover, and made himself completely independent of Jerome and his agents. Jerome could do nothing but submit; he wrote to his brother: "If it suits your Majesty to take back not only Hanover, but a part of the other States which you gave me, though it would be very painful, you may be assured that I shall be happy to make this sacrifice to your Majesty." M. Masson enters into minute details on the complicated questions which arose from the changes made by Napoleon in the boundaries of the new kingdom. Everything, in fact, in the immense empire of Napoleon was subjected to the fortune of war. When Napoleon resolved to invade Russia, he put Jerome at the head of three divisions, forming an army of 60,000 men. The King of Westphalia took his place in the "Grande Armée," and was sent to Poland; Napoleon had for a moment the idea of placing on his head the crown of Poland, and of effacing the Kingdom of Westphalia.

When the war began, Jerome disobeyed some instructions. He did not think his dignity allowed him to obey Davout, a simple marshal; and his inaction permitted Bagration's corps to escape total destruction. The Emperor's irritation was intense. "'My operations are stopped by the want of news. Your chief of staff does not write. Prince Poniatowski does not write. It is impossible to make war. You are occupied only with trifles. . . . You compromise the entire success of the campaign of my right." Jerome was obliged to leave the army, and returned to Cassel. When Napoleon returned in haste to Paris, after the terrible Russian campaign, Jerome saw him for a moment en route at Mayence. The Emperor told him that nothing was left of the Westphalian troops which had joined the *Grande Armée*, and ordered him to raise new levies for the next campaign. They met again in Dresden during the preparations for this new campaign, which ended in the retreat of the French armies. After the disastrous battles around Leipzig Jerome felt that all was lost, and got ready to abandon his kingdom. When the allies approached Cassel, he retired with a handful of French troops.

The establishment and the downfall of the Westphalian kingdom form but an episode in the great Napoleonic drama. We will leave Jerome here. He had been not a bad sailor in his youth; he proved himself to be a very indifferent soldier; and it is somewhat remarkable that none of Napoleon's brothers seem to have had the least share of his wonderful military genius. The philosophy, if I may use the word, of M. Masson's new volumes lies in the fact that Napoleon, after having tried for some years to make of his brothers, whom he had crowned, as well as of Prince Eugene and of Murat, confederates and satellites, changed his mind when he married Marie Louise and had hopes of being the head of a new dynasty. He took all the reins into his own hand, and tried to merge all the kingdoms of his own erection into a new and vast empire larger than that of Charles V. It remains for M. Masson to show us how this gigantic project was defeated. "La Roche Tarpéïenne est près du Capitole."

Correspondence.

A NEW SCHEME OF COLOR.

TO THE EDITOR OF THE NATION:

SIR: In the May number of the *Atlantic Monthly* there is an article, by Mr. Alfred Holt Stone of Greenville, Miss., on "The Mulatto Factor in the Race Problem." The editor introduces Mr. Stone as having made a special study of the subject as it is presented in Yazoo, Miss. My knowledge of it is limited to the Atlantic Coast, but some of the conditions must be identical wherever negroes, in their variations, and the white men who formerly owned them live on the same ground.

Mr. Stone repeats certain general statements which have often been made, and which are admitted by most people who have even a superficial acquaintance with the negro. These are not less true because they are not new; and when admitted truths are used in argument with entire novelty of application, they gain force. Mr. Stone regrets that in the Twelfth Census no distinction was made between the full-blooded negro and the mulatto, as denoting colored people with any admixture of white blood. "Any consideration which fails to reckon the mulatto element as an independent factor ignores what is possibly the most important feature of the problem. . . . I know of no surer means of reaching a working agreement than by the frank acknowledgment of the mulatto factor in the race problem."

After following Mr. Stone along familiar lines in expectation of meeting a new view we reach none, to the end of his article, unless it be a suggestion of different legislation for the full-blooded negro and the

cross-breed. If this be it, on what distinction will the new legislation rest? As the infusion of white blood produces the dangerous element, is exclusion or restriction to begin with that, while the black man pure and simple is to be exempted from disqualifications? Or are there to be three codes, one for whites, one for blacks, one for hybrids? In this case (which would hardly reduce or simplify our race problem) will the color test be absolute, or what degree of admixture will constitute a mulatto? The sixteenth part negro? It is asserted at the South that one-hundredth part is sufficient to perpetuate the type and to reproduce it, complete, after many unsuspecting generations. Then the descendants of a man who is ninety-nine parts white and one negro is to be subject to mulatto limitations *in sæcula sæculorum.* Or shall the negro descendant of one white great-grandparent whose veins have been five times flushed with undiluted African blood, carry the sins of his fathers even beyond the fourth generation? These are points not to be overlooked in considering Mr. Stone's view.

Mr. Stone makes a good remark, if not an original one, when he says (the italics are my own): "The real negro, the negro of the masses, . . . presents few, if any, serious problems, and none which he may not himself work out, if let alone and given time. *But it will be an individual rather than a race solution. . . . Those capable of higher things will find for themselves a field; . . . the vicious and shiftless will be as are the vicious and shiftless of other races.*" In short, blood, like water, finds its own level. Unfortunately, when Southerners speak of "letting the negro alone," it means only that Northerners shall let him alone. Except for his hurt, the Southerner is too ready to let him alone. The many Southerners with whom I have discussed the subject express but two opinions of the race—either that the black man has no good qualities and requires the pressure of slavery to keep his bad ones in check, or that, although there are some moral characteristics for which he is remarkable, they can exist solely in slavery. The more liberal Southerner misses the point—it was not slavery, but contact with a superior race in kindly relations, which brought out these qualities. The negro possesses inherent powers of affection, disinterestedness, patience, fidelity, to a degree of which the Anglo-Saxon is incapable; his singleness of heart is like that of the dog. The relations of master and slave, even when not at its best, developed these with preterhuman intensity; it was like the devotion of Bill Sykes's bulldog. But this was due to intercourse, not ownership; those qualities were and are still to be found where the white man was employer, not master, the black servant a free man. They are here still waiting for the white man to call them forth. If friendliness, confidence, interest on the part of the superior are wholly lacking; if, as far as possible, he shuns intercourse with the black, no wonder that the response of love, trust, and trustiness is wanting. The Southern negro prefers the Southern white of the old slaveholding class to any Northerner, because the old tradition of familiarity is not lost. The Southern white of the "master" class, notwithstanding his denial of merit to the blacks except as slaves, understands and gets on with them better than we do. Recognition and active exercise of this advantage by the Southern white man for the good of both races would bring us a long step nearer the solution of our problem.

RUSSIA AND CHINA.

To the Editor of The Nation:

Sir: The excellent article of my friend Prof. G. Frederick Wright on "Russian Rights in Mantchuria" needs a note on chronology so as to show who, in the Blagovestchensk affair, was the aggressor. Russia joined the allied Powers (except the United States) in making unprovoked war on China, by bombarding the Taku forts on June 17, 1900, when the Peking Government was embarrassed with the Boxer uprising, and before a Chinese regular soldier had fired a hostile shot. When Russia thus, with Great Britain, France, Japan, Germany, etc., had openly and wantonly declared war on China, what were the Chinese to do but attack and kill the Russians and their other hostile enemies wherever they could find them?

It is no wonder that the idea of "China against the world," instead of "the world against China," is the popular impression that obtains currency even among educated men. Let us look at the facts. Our American admiral, Lewis Kempff, who, on June 17, 1900, following our traditional policy from Washington's time, refused to make "entangling alliances" in joining with the allies in bombarding the forts at Taku, thus waging war with a nation with whom we were at peace, has thus far received not one word of official approval of his action, and this, notwithstanding that our successful diplomacy in China, since that eventful day of June 17, has been based on the thoroughly American action of the admiral then in charge of our naval forces in China.—Very truly yours,

Wm. Elliot Griffis.

THE CANADIAN TARIFF.

To the Editor of The Nation:

Sir: I must beg leave to correct an error in the review of Mr. Willison's 'Life of Sir Wilfrid Laurier.' The preference in favor of British goods in the Canadian tariff has not been cancelled in the revision of the tariff as I had been led to suppose.

Your Reviewer.

May 23, 1903.

THE DESTRUCTION OF WILLIAM AND MARY COLLEGE.

To the Editor of The Nation:

Sir: In the letter of Prof. Lyon G. Tyler, in the *Nation* of November 20, 1902, he says, "This carries us to the war between the States in 1862, when the college was destroyed by the Federal troops."

The origin of the fire which destroyed William and Mary College is not clearly established. The main college building was burned September 9, 1862. In the early morning of that date the Fifth Pennsylvania Cavalry, which was then encamped about a mile east of Williamsburg as an outlying post of Yorktown, was surprised by a small Confederate force and driven in confusion towards Yorktown. The Southern troops returned towards Richmond about ten o'clock in the morning. Gen. E. D. Keyes was then in command at Yorktown. About noon of that date the writer, then a lieutenant of the Sixth New York Cavalry, was ordered by Gen. Keyes to pick up stragglers from the Fifth Pennsylvania, take them to their own regiment, ascertain the state of affairs in Williamsburg, and report to the General in Yorktown the same day. I arrived in Williamsburg while it was yet day. The main college building was then in ruins, and its appearance indicated that the fire had occurred a number of hours before. From all that I learned at that time, the origin of the fire was unknown. In 1894 Congress made an appropriation of $64,000 for the rebuilding of the college.

The affidavit of two ladies of Williamsburg before the Congressional Committee as to the origin of the fire would not be sufficient, before an ordinary jury, to convict the Federal troops of having fired the building. These witnesses, in the fierce excitement and passion of the time, would naturally confirm in their own minds the belief that the college was fired by Federal troops. As the college building had been previously used for a hospital, it is quite possible that the Southern force, or part of it, which made the attack on the Fifth Pennsylvania, was concealed there on the night of September 8, and the fire may have been the result of an accident.

The statement that the second oldest college in America was wantonly destroyed by Federal troops during the civil war, should not go into history unchallenged.

Yours respectfully, E. P. McKinney.

Binghamton, N. Y., May 18, 1903.

POOR BOOKMAKING.

To the Editor of The Nation:

Sir: With reference to the general condemnation of Wolfson's 'Essentials in Ancient History' in yours of May 7, let attention be invited to one point, his "vicious" style, as illustrated in the two paragraphs beginning near the bottom of page 13. To any one rusty in Asiatic geography, it will be a triumph to succeed in forming a clear image out of the author's jumble of expressions. And yet this book is the outcome of the most formal effort that historical students in this country have put forth for the advance of their branch. It is the result of the recommendations of a committee of the American Historical Association, though of course they are not responsible for the imperfections of the work. Still, it is an evidence, added to many others, of the unsatisfactory pedagogic standing of the study. Is the firm that issues it the one that lately sent out a brave prospectus of a coöperative history of this country? If so, we know what to expect.

"B. C."

BLIZZARD.

To the Editor of The Nation:

Sir: To aid Mr. Matthews in his researches into the use of the word *blizzard,*

I will say that I went as a student in 1840 to Illinois College, Jacksonville, the oldest college in the State, and the first to graduate a class. I then found in use on the ball ground the word *blizzard* for any very forceful stroke of the bat. "He hit it a blizzard," we would say. The word was not in use at the same institution when I was there for a few months in 1836, nor was it used at Shurtleff College, Upper Alton, when I joined in the sports there in 1839. Transferred from Boston to southern Illinois in 1831, I had been from my childhood observant of dialect; but it did not occur to me to ask how the new word had been introduced at Illinois College in the interval.

SAMUEL WILLARD.

865 JACKSON BOULEVARD, CHICAGO,
May 23, 1903.

Notes.

A luxurious limited edition of Matthew Arnold's Complete Works in fifteen volumes will begin to be issued in June by Macmillan Co., and thereafter at monthly intervals. An exhaustive bibliography will form part of the last volume.

Dodd, Mead & Co., in autumnal anticipation, announce an American edition of Lang's 'History of Scotland'; biographies of Philip Schuyler, Milan (King of Servia), Cowper, and Thackeray, and a new volume of essays by G. K. Chesterton.

A library edition of Charles Kingsley's Works will be issued at the rate of two volumes per month by J. F. Taylor & Co. of this city. The editor is Kingsley's oldest son, Maurice, who supplies the introductions and other matter.

A full index to the entire Works of Emerson now in course of publication in an annotated centenary edition is promised by Houghton, Mifflin & Co. The volumes of this edition, by the way, are to be had separately.

A new edition of Du Cange's Glossary ('Glossarium ad Scriptores mediæ et infimæ Græcitatis'), reproduced in facsimile after the original Paris edition of 1688, is being issued by subscription by Gustav Fock, Leipzig (New York: Lemcke & Buechner).

A plan is on foot in England to reorganize the Pipe Roll Society on somewhat different lines from the old society, and with every prospect of a permanent success. The original society suspended in 1900, from declining support, after a useful existence of sixteen years, having printed the rolls from the fifth to the twenty-first year of Henry II. It is proposed now to go on with the publication of these important financial documents to the second year of John, twenty-five in all. The use of "record type" in printing will be given up, and abbreviations will be extended, but in such a way as to indicate plainly all uncertain extensions. It is hoped that American scholars who are interested in the history of the period will give the plan their support. Names for membership should be sent to W. Farrer, Esq., Leyburn, R. S. O., Yorkshire.

The reprints of English classics have gone on during the week with three more volumes in the "Fireside Dickens" (H. Frowde), viz., 'Nicholas Nickleby,' 'The Old Curiosity Shop,' and 'American Notes,' containing the original illustrations; Lever's 'Harry Lorrequer' and Lord Lytton's 'Night and Morning' (London: George Newnes; New York: Scribners), delightful little volumes in flexible green and gilt covers, with engraved title-pages and frontispieces, together with one, more oblong, in blue, 'Poe's Tales,' whose frontispiece is a very successful dusky Poe composing beneath the bust of Pallas; and, in the well-known Dent-Macmillan "Temple Classics," Fanny Burney's 'Evelina,' in two volumes. With these we may couple two more issues in the Temple Bible (London: Dent; Philadelphia: Lippincott), Maccabees, edited by W. Fairweather, and Ecclesiasticus, edited by N. Schmidt, with the customary introduction and notes.

The latest addition to the "Muses' Library" is 'Thomas Campion: Songs and Masques, with Observations in the Art of English Poesy,' edited and published in London by A. H. Bullen (New York: Scribners). Mr. Bullen did so much to reclaim Campion from neglect by including him in his Elizabethan anthology of 1887, and by editing his collected works in 1889, that now, he says, this poet "runs the risk of becoming the subject of uncritical adulation." Meanwhile Mr. Bullen has had an opportunity of examining the only perfect copy known of the first edition of the Latin Poems ('Thomae Campiani Poemata,' 1595), which he reports upon, but the present collection omits these poems except in citations for the introduction. The editor challenges the descent of Campion as conjectured in the Dictionary of National Biography.

'Social England Illustrated' and 'Critical Essays and Literary Fragments' (New York: E. P. Dutton & Co.) are reprints of selected tracts from Arber's well-known "English Garner," throwing light on the social conditions of the 16th, 17th, and early 18th centuries. Messrs. Andrew Lang and J. Churton Collins prefix very readable introductions. The former volume has no index, an unpardonable omission in a book of this kind. Why Professor Arber thought it necessary to "modernize" the spelling and grammatical forms of 17th-century texts is a question that still awaits an answer.

In 'Side-lights on Charles Lamb' (Charles Scribner's Sons) Mr. Bertram Dobell gives us the results of researches in the *London Magazine* and other contemporary sources for unrecognized contributions of Lamb. A number of these he thinks he has identified; and with respect to two, the "Appeal from the Shades" and "Delamore's Confessions," he seems to have made out a plausible case. Anecdotes of Lamb and of his literary friends are given, and a chapter is devoted to that strange Jekyll-and-Hyde personage, Thomas Griffiths Wainewright, whom Lamb knew only as a gay converser, sparkling essayist, and harmless coxcomb. The book is pleasant reading, for Lamb is so endearing a personality that we are thankful for even fitful side-lights upon him.

Mr. William E. Curtis's title, 'The True Abraham Lincoln' (Lippincott), stands confessed a pure catchword. The author assures us on his first page that Lincoln has been written out ("the subject of more literary composition than any man of modern times"—Napoleon, for example!), that he was a man without mysteries, whose conduct morals, and motives have engendered no controversies, as his purposes no doubts, and whose reputation is firmly and clearly established as none other more so "in American history, or in the history of the human family"! Then why the "true" Lincoln at this late date, as if other biographers had falsified? The book cannot be said to be called for. On the other hand it is "true" as far as it goes, but there is neither much merit nor completeness in the representation. The real question of "truth" is likely to be raised over Lincoln's actual appearance. The portraits of him are numerous, and range from common or vulgar almost to beautiful. Let any one compare those facing pages 60, 100, and 168, and try to imagine them the same man. The text is not free from errors and carelessness, and the index is lamentably poor.

'Wood Folk at School,' by William J. Long (Ginn & Co.), is, practically, the author's recent book, 'School of the Woods,' with the theoretical essays omitted and the stories presented in the guise of a school reader. Its main theme is the development, by instinct, training, and experience, of the habits of self-preservation in animals. The sketches include biological chapters from the life histories of the osprey, the great blue heron, the ruffed grouse, the porcupine, the deer, the moose, and the black bear. Such interesting and significant meetings with wild animals as Mr. Long describes could not easily be matched in the combined experiences of a dozen woodsmen or naturalists. The stories are well told (if not always in language easily comprehensible by the young) and finely illustrated.

'True Bird Stories,' by Olive Thorne Miller (Houghton, Mifflin & Co.), is a book of short stories about the habits of certain caged birds and birds in the field. The statement in the preface that all the stories are strictly true, leads one to suspect that in some cases the author is either ambiguous in expression or mistaken in the interpretation of some of her pets' habits. For instance, she tells of a robin that felt disgraced because it had a worn and shabby feather, and of a parrot that, having vanquished a sparrow, crowed over her victory with the sound "Cr-r-r-cr-r-r." One must be well versed in avian psychology to generalize thus about a robin's mental sensations, and one would perhaps find, if one studied parrots closely, that the sound "Cr-r-r-cr-r-r" is a note not of victory but of alarm. Though the book will interest children, for whom Mrs. Miller intends it, its scientifically valuable observations are few in proportion to the large amount of material that passed under the author's eye, and it lacks the charm of style that belongs to some other popular books of this kind. The most interesting chapters are devoted to the English sparrow. One of these gives an account of a bird that sings a canary song. Some time ago Mr. Ernest Thompson Seton told of a similar case. The book is beautifully illustrated by Mr. Louis Agassiz Fuertes.

'The Water-Fowl Family,' by Leonard C. Sanford and others (Macmillan), is the third volume of the "American Sportsman's Library." It deals with ducks, geese, rail, snipe, and their allies, and includes a scientific description of each species and the methods of shooting each game bird. The numerous fine illustrations are by Mr. Fuertes. In general manner of treatment the book is similar to Mr. Grinnell's ad-

mirable 'Duck-Shooting in America'; that is to say, it is essentially a sportsman's manual, which tells the story of the hunt so vividly that one almost hears the whistle of wings, smells powder, and feels the thud of the bird brought to earth close at hand. The directions for shooting ducks in rice fields, for pass shooting, and for shooting from a sink-box, as well as for various other forms of sport, will be valuable to the novice. Decoys, both artificial and living, are particularly well treated. Mr. Sanford has shot game birds in New England, on the Chesapeake, on Currituck Sound, N. C., on the prairies of the Central States, and in Mexico. The book is concluded with the discussion of the water fowl of the Pacific Coast by the well-known sportsman-author, Mr. T. S. Van Dyke.

'Irrigation Institutions,' by Elwood Mead, is the latest addition to "The Citizen's Library of Economics, Politics, and Sociology" (Macmillan). The author, in a small volume of some 400 pages, discusses the economic and legal questions created by the growth of irrigated agriculture in the West, and throws a great deal of light on questions which have received renewed importance through the recent legislation on the subject at Washington. The author is an expert, and his twenty years' experience has given him a complete command of the subject, which he discusses in a very lucid and instructive manner. As engineer, chief of a Government bureau, lecturer and professor, he has had to deal with irrigation from every side, and his book should prove of great value, though of course it cannot be said to be for general reading. For lawyers it possesses much interest. The chapter on "The Doctrine of Appropriation" seems to show that, in the case of irrigation rights in the West, we have a clear instance of the growth of what Blackstone would have called "title by occupation."

Mr. E. T. Whittaker's 'A Course of Modern Analysis,' while not forming a complete and rounded whole, will greatly interest the genuine student of pure mathematics; and even those who are pretty well up in the subjects with which it deals will be very glad to refresh their ideas with this compact book, especially on account of the recent results that it contains, as well as for its giving some developments that cannot be called recent, but which have as yet hardly made their way into text-books. We do not consider its standard of logicality or of accuracy of statement to be the very highest; but this is perhaps an advantage, as it keeps the reader's mind on the *qui vive*. After eight chapters concerning series, residues, and connected topics, it proceeds to give an excellent chapter each to the Gamma Function, Legendre Functions, Hypergeometric Functions, Bessel Functions, and Laplace's Equation, and three chapters to Elliptic Functions—that is, to Weierstrass's forms, to Jacobi's forms, and to General Theorems, respectively.

The memorial service in Harvard's chapel in memory of the late Mrs. Alice Freeman Palmer, one of the most remarkable educators of her generation, former President of Wellesley College, has been fittingly recorded in a thin volume issued by Houghton, Mifflin & Co. Five portraits, from childhood to middle life, afford a highly interesting study of physical and spiritual development.

Various are the devices for replacing and supplementing the record pages of the obsolescent Family Bible. Such is the blank book, 'Happenings in Our Home,' published by Joseph Clark Bridgman, Boston, with some pictorial embellishment, pertinent quotations, gilt edges, and tasteful leather cover.

The new edition of James and Molé's 'Dictionary of the French and English Languages' (Macmillan) may conveniently be compared with the 1898 edition of Gasc. It is smaller in size, a plump 16mo, clearly printed, its bold-face rubrics being perhaps a little too light as those in Gasc are a shade heavy for contrast and prompt legibility. The vocabulary is apparently less full, and omits geographical adjectives, *e. g.*, *Ligurien*, *Garonnais*, such as Gasc conveniently gives, yet contains words and definitions not in Gasc. A very brief comparison will show that the works usefully supplement and need not exclude each other. In neither is the English-French portion completely correlated with the French-English. Thus, the later work, which defines *lignard* 'penny-a-liner,' omits penny-a-liner from the English vocabulary. Sewing-machine, on the other hand, will be sought in vain under *machine* or under *coudre*, as type-writer under *machine* or under *écrire*. For the rest, there are the usual lexicographical differences of practice, as when Gasc places the phrase *dents longues* under *dents*, James and Molé under *long*. The latter work alone indicates the pronunciation in both languages. The former is more profuse in slang and colloquialisms. Both are welcome and handy tools.

Of the numerous histories of German literature from the earliest times to the present day written by Germans during the last sixty years and combining conciseness with comprehensiveness in the treatment of the subject, those of Vilmar and Wilhelm Scherer have probably held the most prominent place and enjoyed the greatest popularity, especially as manuals of instruction, although the former is too strongly colored by the author's theological views in the criticism of modern literature, and the latter is not wholly free from æsthetic defects. These works are evidently destined and indeed already beginning to be superseded by Adolf Bartel's volumes, 'Geschichte der deutschen Litteratur' and 'Die deutsche Dichtung der Gegenwart: Die Alten und die Jungen' (Leipzig: Eduard Avenarius), which possess all the good qualities of Vilmar and Scherer. The two volumes containing a general history of German literature are divided into eight "books" or sections, of which the first gives a condensed but careful study of old German literature from its origin to the end of the fifteenth century, and the second an account of the literary productivity of the sixteenth and seventeenth centuries; two books are devoted to the eighteenth, and four (constituting the entire second volume) to the nineteenth century. Each book begins with a general survey of the period under consideration, followed by a characterization of the individual authors belonging to it and a special criticism of their writings. The skilful application of this method of treatment results in a singularly attractive sketch of the evolution of German literature, supplemented by details of personal information usually found only in biographical dictionaries, without detriment to the artistic unity of the work as a whole. The same system is successfully applied to the second work, on German poetry of to-day, which is the most satisfactory compendium of the history of German poetry and fiction during the latter half of the nineteenth century hitherto published. It is difficult for one who is standing in the midst of any intellectual movement to form a correct estimate of its character and compass. This is why it is quite impossible for even the most impartial and keen-sighted critic to pass a full and final judgment on contemporary literature. Many of the elements which enter into the formation of such a judgment are necessarily wanting. With this inevitable qualification, the work, of which five editions have already been issued, is an admirable supplement to the general history of German literature.

A piece of information of pathetic interest is concealed in a little footnote on page 412 of the just published sixth part of Bugge's edition of Norwegian Old-Rune Inscriptions. It reads as follows: "Sophus Bugge, who, up to the present time has been the sole editor, has hitherto read squeezes of several of the inscriptions hereinafter published, but now, when the inscriptions are to be published, he can, from infirmity of sight, neither read nor write. Magnus Olsen, therefore, from now on, will be co-editor." If this disability is to be permanent, it will to a certain extent mark the end of a singularly distinguished scientific activity. At the beginning of the present year, Bugge celebrated his seventieth birthday, on which occasion his pupils and friends among Norwegian philologists presented him with a fund, for the furtherance of some scientific purpose selected by him. He decided to use it for the establishment of scholarships for Norwegian students to study at other Scandinavian universities, in order thus to promote mutual familiarity and consequent good feeling among the Scandinavian peoples. Simultaneously with the news of Bugge's affliction comes the information that his son, a worthy offspring, has been awarded, as the first recipient, the Nansen prize for a treatise dealing with the influence exerted by Western, especially Irish, civilization on the Scandinavians, and particularly the Norwegians of the Viking period.

Petermann's Mitteilungen, No. 3, contains some interesting facts about the inhabitants of Yap, the westernmost of the Caroline Islands. They are decreasing in number largely because of their immoderate use of bad alcohol. Not infrequently the people of a whole district will be drunk for a week at a time. They have, nevertheless, some unusually good qualities, as generosity and fine feeling, of which instances are adduced. Their food, ornaments, industries, amusements (including twelve different games), family life, and government are described at some length. A peculiar custom is that of boring a hole through the cartilage separating the nostrils after death, if it has not been done before, in order, they say, that the man "may find the right house in heaven." There is also the description of a new way by which Russia plans to enter Persia—along the trans-Caucasian frontier to Tabriz and Kazvin, eighty-six miles north of Teheran. A concession to build a road along this

route has just been granted to a Russian bank, and work will be commenced at once.

The first annual report of the Schoolhouse Department of Boston is a public document, unique, if we are not mistaken, and of unusual value and importance. The Board, consisting of three Commissioners—Mr. R. Clipston Sturgis (a well-known architect) being Chairman—was appointed two years ago by the Mayor to exercise "all powers and authority with regard to taking of land, construction, and furnishing of new school buildings, and the repairs and alterations of old school buildings." This review of their work shows that they first solved the problem of insufficient school accommodation by building eighty-one one-story portable schools capable of containing fifty children each. Then they did all their appropriation permitted to improve the sanitary condition of the old buildings and to decrease the fire risks. In an appendix, five typical examples of "new sanitation" are described, with numerous illustrations. Some ten pages are devoted to instructions to architects and general information regarding internal arrangements, the planning and furnishing of the rooms in particular. There is a guarded reference to the efforts of the labor unions for recognition, and their criticisms of work executed by the Commissioners. In order to prepare themselves for their duties, the Board visited nine of our principal cities and examined their school buildings. Among other things, they found that "Boston was doing more in the way of gymnasia and bath facilities than any other city, with the possible exception of New York." Much information is given in respect to the authorized expenditures of the Board, and there is a "descriptive schedule of permanent school buildings." Frederic J. Cotton, M.D., contributes a report, with diagrams, on school desks and chairs.

—It is pleasant to notice a steady improvement in the volumes of the 'New International Encyclopædia' (Dodd, Mead & Co.) as they appear. Editors and contributors are evidently taking their task much more seriously, and the last three volumes, vii.—ix. ('Ethics—Infant Phenomenon), are a marked advance on their predecessors. When the earlier volumes have been carefully revised, as we understand is being done, this work will make a fair approximation to fulfilling the claim of its title-page and prospectus. The departments which we have already noticed as good, continue in their path of virtue; some, indeed, as the classical rubrics, steadily improve. The Aryan and Iranian East continues to claim, if anything, disproportionate space, but the Semitic contributors fail to demand their fair proportion or to make good use of what they get. There is here, it is true, an improvement, but it should be carried much further, and the printing errors in these rubrics are still too numerous. The hackwork articles and the proofreading are in general, however, much better; such blunders as Emphorian for Euphorion (ix., 260) are comparatively rare. The case of the department of literature is still so curiously diverse as to be worth a word of comment. The articles of weight both for English and, perhaps still more, for foreign literature are of general fulness and accuracy. So insufficient a treatment as the third of a column given to Herrick (ix., 364) is, in these later volumes, creditably infrequent. There are even some distinctly brilliant biographies. But the general fulness is not nearly so great as that devoted to the drama and, more particularly, the stage. On this side, however, that exuberance in notice of actors and actresses which characterized the earlier volumes has now, happily, been somewhat restrained.

—The same, unfortunately, cannot be said of the articles on literary references and names generally in imaginative literature. The subject, it must be admitted, is one exceedingly difficult to handle, but that cannot excuse the inadequacy, the waste of space, the ineptitude, the incompleteness and therewithal wordiness which characterize these rubrics at present. Examples of all these defects are to be found, *e. g.*, in the articles Galahad, Galaor, Galapas, on two following pages of volume viii. Similarly, the article on Grim, where the romance of Havelok the Dane is said to belong to Arthurian legend. This interesting information is evidently derived from the 'Century Cyclopædia of Names.' Equally irritating and puerile are the articles on Excalibur and Excelsior; in the space, it would have been quite possible to convey a fair amount of information instead of simply using words. Disproportionate length is what ails such articles as those on Father Tom, Froment Jeune, Poe's 'Fall of the House of Usher,' and many others. The crude treatment of the 'House of Usher' alone will give shivers to any lover of Poe. Inexplicable omissions are easy to find. Gibbie, Goose (so entered), of 'Old Mortality' has his immortality doubly secured here, but not the Sir Gibbie of George Macdonald. So, too, are missing Euphorion—both as the son of Achilles in the shades and of Goethe's 'Faust'—Fitzgerald's 'Euphranor,' and many beside. An attempt to catalogue all the names in English literature must manifestly fail, but the selection might be better hit than here. We could easily do without the giant Galapas in exchange for Euphorion; and Guse Gibbie will be hard to seek under Gibbie, Goose, and not highly important when found. Evidently these little notices emanate from another source than that which furnishes the longer and infinitely more scholarly articles on literature.

—'The American Republic and its Government' (G. P. Putnam's Sons) is the title of a new work on American politics by Prof. James Albert Woodburn. It is "an analysis of the Government of the United States, with a consideration of its fundamental principles and of its relations to the States and Territories." It is designed for the field of study intermediate between "elementary text-books in civics" and that occupied by books (so far as there are any) like Bryce's 'American Commonwealth.' The volume is divided into eight chapters, which deal with the "Principles of the Fathers," the Federal Nation, the Presidency, the Senate, the House, the Judiciary, the States, and the Territories—a convenient system of treatment. Of course the whole subject is well worn, and it is difficult to say anything new about it. But historically the work is brought down to date, for it includes a discussion of the Insular cases. It also contains—what most text-books of the sort, according to our observation, omit—an attempt to enumerate the provisions of what Mr. Woodburn calls our "unwritten Constitution," *i. e.*, the political usages which, having no legal sanction, have grown to have the force of law. These, as he gives them, are six in number, and four of them may be regarded as practically established, though as to one of these his form of statement seems to us objectionable. Presidential Electors must vote for the party nominee; a President cannot be elected for a third term; a member of Congress must reside in the district from which he is chosen; and the Senate never rejects Cabinet appointments. We should be willing to admit that custom forbids a third consecutive term, but know of no principle on which the anti-third-term usage is founded which could possibly apply to disconnected terms. The remaining two—the committee system in Congress, and the obligation of the caucus—do not appear to us to involve Constitutional points; one is a matter of parliamentary custom, the other a pure party custom, really binding on no one, and indeed, if admitted to be binding, fatal to free government itself.

—Among recent law books is a valuable collection of 'Cases on International Law' (English and American), edited by James Brown Scott, with a syllabus and annotations (The Boston Book Co.). It is based on Dr. Freeman Snow's well-known 'Cases and Opinions,' but the changes made are many and radical, and the result is an independent work. An important point to notice is that Mr. Scott's underlying idea is, as he says himself, that international law is part of the English common law; that the American colonies inherited it as such; that on their admission to the family of nations they recognized it, and that it is to-day part of the municipal law of the whole English-speaking world—English and American courts of justice have been enforcing it for two centuries. On "the vexed question whether it is law in the abstract," the author expresses no opinion, but he need not have been so non-committal, for the best proof of the existence of law that we can have is exactly this often overlooked fact, that it is enforced by courts of justice all over the world. A prize court, for instance, is a court of international law, though it is established in a particular country; and a belligerent who brings a prize into it must abide by its decision, though it involve the release of his prize. The fact that there is a large portion of international law that is not enforced by judicial decision and rests on custom does not seem any ground, therefore, for denying the existence of international law, as law. Austin objected that there was no superior power to enforce it—no "sanction." This volume contains nine hundred cases to the contrary.

—Since the year 1895, when Professor Goodyear announced his discovery of horizontal curves in the Maison Carrée at Nîmes, the publication of the results of his examinations of buildings classical, mediæval, and Renaissance for their optical refinements has proceeded so rapidly that the list of titles now reaches twenty. In these papers Professor Goodyear has established, too fully to permit of contradiction, the proposition that many of the singular and otherwise inexplicable irregu-

larities in mediæval buildings were due to a desire on the part of their builders to relieve the structure from the deadly precision from which modern work suffers. That a large proportion of such irregularities were in reality optical refinements of a certain sort, due neither to the negligence of the builder nor to settlement of the structure, must be acknowledged by every candid person who has read with care such papers as "Optical Refinements in Mediæval Architecture" or "Perspective Illusions in Italian Churches." It is, however, in his latest work, 'The Architectural Refinements of St. Mark's at Venice' (volume i., No. 2, of Memoirs of Art and Archæology of the Brooklyn Institute; New York:Macmillan), that Professor Goodyear puts forth his most convincing array of facts. Singular irregularities in the lines of St. Mark's are obvious to all but the most casual observer, and indeed to these irregularities is due no small part of the church's peculiar charm. It seems to have been taken for granted that these deviations from the normal were chiefly to be ascribed to faulty foundations and consequent settlements, but Professor Goodyear has, by careful surveys and by clear reasoning based upon them, demonstrated that such irregularities (or at least the more important of them) must have existed from the time of the original construction of the fabric.

—Briefly summing up a few of these results, we find that the inner face of the outer walls of the church leans outward some three to six inches in a height of sixteen feet; that the nave piers lean outward slightly in sympathy with the walls; that the nave wall-face from pier caps to gallery leans still more perceptibly; and that the nave wall-faces above the gallery to the springing of the great arches over the nave fall away from each other so rapidly as to cause the liveliest surprise when their actual inclination is known. The amount of this widening is so great that a line stretched across the nave at the springing of the main vault is nearly three feet longer than if stretched upon the pavement. That a spreading of three feet in the abutments of the arches which span the nave might have taken place without a total destruction of those arches and of the dome which they carry, is unthinkable. No adequate expression can here be given to the value of the work thus done at St. Mark's. Bearing in mind, however, the fact that the surveying of St. Mark's is but a small part of a great series of observations which he has made, we urge upon Professor Goodyear the importance of collecting the results of his labor into a work in which they will lose the transitory character of magazine articles and pamphlets, and where they may be presented in a more orderly and adequate manner than has been possible in their original form—a work which, in brief, should as worthily portray the optical refinements of mediæval architecture as does the monumental volume of Penrose those of Athenian architecture.

—The Istituto Italiano d'Arti Grafichi of Bergamo has begun to issue a series of illustrated monographs under the general title, "Italia Artistica." Their purpose is to give a summary account of the most interesting Italian cities, laying special stress on architecture, sculpture, and painting. The latest of these monographs, 'Venezia,' by Pompeo Molmenti, is a model of what such works should be. In the course of perhaps 25,000 words, he describes the evolution of the city of Venice from the earliest times down to the present, showing not only what transformations time has wrought in the various schools of architecture and painting, but what monuments still remain of each period and master, and blending all with a brief narrative of the historical and social career of the Venetians. In spite of the laudable compactness, the account is written with so much fervor that it is unfailingly charming. It is as if the man best qualified in all the world took the reader through Venice, visiting the churches, galleries, and palaces, and exploring the remotest canals and *calli*, and told how each work originated, and how far it represents the age to which it belongs, or the master who created it. Sig. Molmenti is easily first among living authorities on the history and art of Venice, and he is one of the few really able writers of Italian. Whoever has studied this field will admire the sanity of his judgments on art not less than his clear grasp of Venetian history. The little quarto volume is illustrated by 132 excellent half-tones, and its cheapness (3.60 lire) should give it wide popularity. Other cities already announced in this series are Ravenna; Ferrara; Girgenti, Segesta, and Selinunto; Urbino; San Marino; and Prato—with more to follow. The volumes, if they approach Sig. Molmenti's model, will be indispensable to travellers, students and the average intelligent reader.

A LEIPZIG PUBLISHER.

The Life and Times of Georg Joachim Goschen, Publisher and Printer of Leipzig, 1752-1828. By his Grandson, Viscount Goschen. London: John Murray; New York: G. P. Putnam's Sons. 1903.

Probably most readers of this bulky memoir will lay it down with a feeling that there is too much of it, although the subject is undeniably an interesting figure. Beginning almost without capital, in the year 1785, and facing the most discouraging conditions on account of the lack of effective copyright laws in the German states, Göschen rapidly built up a good business. His personal qualities endeared him to Schiller, with whom he continued in intimate relations until about 1793, when the rising star of Cotta caused a temporary estrangement. He also published the first collective edition of Goethe, won for himself the sobriquet of "the German Elzevir" with a monumental edition of Wieland, and delighted the classical scholars of his day with the superb Greek types of Wolf's Iliad. And many other notable men were among his clients. He had a large capacity for friendship, and combined in a remarkable way the qualities of a romantic sentimentalist with those of a level-headed and sagacious business man. Such a personage, standing in such relations, was clearly worthy of a biographic memoir, even after the lapse of more than a century. That Viscount Goschen's tribute to him has expanded into two thick volumes is due to the partiality of a grandson.

But any criticism directed at the undeniable diffuseness of the work is in a measure disarmed by the author's engagingly modest preface, in which he states that he has written rather for the general public than for savants or literary experts, and that he has been trammelled from the first by the difficulty of deciding to what class of readers he should attempt to appeal. He says of himself:

"I wish that I had been more competent to travel in his [the grandsire's] company through the vast field of literary topics involved in the life of a publisher whose activity ranged over forty-three years. A busy political career has left me unable to explore sufficiently the mass of Goethe and Schiller literature which a century of devoted study and eager criticism has developed to an impenetrable bulk."

And again:

"Having been a reader, not a writer, of books all my life, I have sometimes felt a shade of resentment against the assumption on the part of an author that I was acquainted with a number of facts and dates of which I had the misfortune to be ignorant. . . . Accordingly, finding myself continually compelled to allude to the effects of wars, congresses, treaties, and political catastrophes on the personal destinies of my grandfather and his group of clients, I have not shrunk from giving in briefest outline, and, where possible, in chronological order, such European events as bore upon my narrative. I have done this at the risk of recounting what 'every schoolboy should know,' but what, as a matter of fact, many educated people know but imperfectly."

The Viscount's willingness to accommodate himself to the limitations of the unlearned British public is shown at the outset by his changing his grandfather's name from Göschen to Goschen, experience having shown him "from his schoolboy days at Rugby that the unfamiliar modified vowel is a source of perplexity and of diversity of pronunciation in this country." For our own part, we prefer not to follow his example, but to write the name as its owner wrote it, and as it has been familiar to students of German literature for a hundred years and more.

The narrative is devoted mainly to the history of Göschen's publishing business—his negotiations with authors, his financial perplexities, his warfare with the pirates, his successes and failures. At the same time the human side of him—love, marriage, friendships, personal traits, etc.—is not neglected. And along with all that, we get numerous historical retrospects and digressions *de omnibus rebus et quibusdam aliis*. Thus, a chapter, and an interesting one, is devoted to a history of the Leipzig book trade. Another gives an account of different efforts on the part of authors to escape from their bondage to the publishers by founding coöperative societies or by publishing on subscription. As we read along, our memoir gives us a sketch of the life of each new writer who is gathered in by Göschen's enterprise. Thus, we get a somewhat extended account of Schiller, Körner, Wieland, Klopstock, Iffland, and others. Here the author relies mainly on familiar sources, but is able to contribute some new matter in the way of unpublished letters from Göschen that have been preserved in the family achives or acquired for this memoir.

On the whole, while the well-informed student of the German classics will find in the work much that he can safely omit, and while he will not be greatly profited by its literary appreciations, he will get from it a very good picture of the German literary industry in the Revolutionary and

Napoleonic periods. One sees how contracts were made, what prices were paid, and how, even in those golden days, publisher and author sometimes conspired to prepare the way for cooked reviews. Interesting side-lights are thrown upon literary history. For example, it is well known that the new works which Goethe sent home from Italy in 1787-8 were received rather coldly. This little fact is brought out vividly by the following extract from a letter written by Göschen, September 2, 1787:

"I am annoyed to see that only a hasty critique of Goethe has appeared. Publishers who have taken copies as a speculation want to return them. *Iphigenia* is not understood, the *Brother and Sister* is tiresome, the *Triumph of Sensibility* is out of date and comes too late, and the *Birds* is too obscure. The devil alone knows what these people may want. The public must be taken by the nose and led up to it. Then I shall have no fear. Do your utmost to insure a clever critique of it soon."

After such an experience it is not strange that Göschen lost faith in Goethe and fixed his hopes on the more popular Wieland, whom he admired idolatrously. When the 'Metamorphosis of the Plant' was offered him in 1790, he declined it with thanks, and in so doing made the mistake of his life. An eager acceptance at any price would have been, just at that stage of the game, a good stroke of business. As it was, Goethe drifted with Schiller into the hands of Cotta, who was no less enterprising than his Leipzig rival, and had a surer instinct for literary merit. Göschen was left to his monumental edition of Wieland, which taxed his resources and his energies for years. This was his greatest professional achievement. It brought him only moderate returns in money, but great renown as a typographer.

The character of Göschen, as it emerges from the totality of the memoir, is that of an amiable, quick-tempered man, of tireless energy, and of strict probity in business relations. He hated the pirates and lost no opportunity to denounce them. To circumvent them he resorted occasionally to the expedient of "pirating" his own publications, that is, of issuing them anonymously in a cheap edition, having the appearance of stolen fruit. Yet, notwithstanding a certain fiery pugnacity, he could on occasion sentimentalize with the best of them. He writes to his wife from Switzerland in 1792—several years after their marriage—addressing her as "My heavenly Jette," and gushing thus about the Lake of Zürich:

"It was a lovely evening. The sun set in indescribable beauty behind the mountains, and then the moon shone over the lake; anon I saw her over a church, anon she cast broken rays athwart high trees upon the water, anon she gleamed on the sails of ships or silvered the waves. The houses, too, which form an uninterrupted line on each side twenty-four miles in length, were lit up. My breast expanded perforce. Involuntarily I sang songs, and tears of joy gushed from my eyes. Enjoyment was so strong that my heart needed an utterance."

The Napoleonic incubus brought bitter and peculiar trials to Göschen. After the battle of Jena, business came to a standstill, and he was near to insolvency. He recovered in a measure, but had no longer the capital or the spirit to undertake fine enterprises for honor's sake. When the final struggle against the Corsican came, his home at Grimma was on the highway of vast contending armies, and suffered terribly. He himself was mildly a German patriot, and two of his sons were in the patriot army. At the same time he was a loyal Saxon, and his king was in alliance with Napoleon. The French censorship of the press was galling, but there was no help save in the triumph of the Prussian "enemy." In these desperate circumstances Göschen bore himself with religious fortitude. After Waterloo his business went on, but was no longer of great importance. He died in 1828, worthy, certainly, of a better epitaph than that which he once lightly suggested for himself: "The poor devil meant well, but he had no luck."

The memoir is handsomely and very accurately printed, and supplied with numerous excellent illustrations in the way of portraits, facsimiles of handwriting and of title-pages, and specimens of Göschen's best work as a printer.

THE CARLYLES.

New Letters and Memorials of Jane Welsh Carlyle. Annotated by Thomas Carlyle and edited by Alexander Carlyle. With an Introduction by Sir James Crichton-Browne. With sixteen illustrations. 2 vols. John Lane. 1903.

The letters contained in these volumes are, as Sir James Crichton-Browne says in his introduction, "residual in character"—that is, they are those which Mr. Froude "multilated or put aside," he having, "of course, selected from Mrs. Carlyle's writings whatever was of most literary merit or popular interest." Still, they are "intrinsically worthy of publication," while "adscititiously" they deserve attention "because they clear up some obscure points in a complicated controversy, and help towards a just judgment of two prominent figures in our English Pantheon."

Of the letters themselves he says that, like those published in 1883, they are open to the criticism that "they are overloaded with domestic details about spring-cleanings and other housewiferies, trivial incidents of travel, intricate itinerary arrangements, and complaints of postal "irregularities"; but as Froude had already introduced "such superfluities," while omitting "much that was essential to the understanding of her story," elisions in the letters that are intended to refute his story were to be avoided. Had Mrs. Carlyle's correspondence as a whole to be edited *de novo*, "a very different method of dealing with it from that adopted would have been followed." Besides all this, the letters "sparkle with wit; they afford delightful glimpses of the meagre fireside in Cheyne Row, around which the great ones of the greatest epoch of a great age were glad to gather; they throw illuminative side-lights on memorable events, and, above all, smooth out the dents and brush away the stains and blurs with which negligent usage and venomous breathings have blemished and tarnished the most massive and shining literary reputation of the last century."

The introduction proceeds in nearly a hundred pages to re-analyze the Carlyle story, to reëxpose Froude, and to give what Sir James Crichton-Browne believes to be the true view of the characters and marital relations of Carlyle and his wife. Froude's great mistake, it seems, was that "it was deeply rooted in his mind that Carlyle had, throughout their whole union, behaved badly to his wife," and had "deputed him, as a sort of literary undertaker, to superintend a posthumous penance in the publication of his confessions." As all preconceived ideas have their starting-point, the origin of this misconception lay in a misunderstanding of Carlyle's use of the word "remorse." Carlyle's nature was noble and generous, and hence of "a peculiarly self-accusatory type. He was fond of strong language, and uses exactly the same word—the strongest he can think of—whether he is speaking of his feelings of regret for idleness when he had been resting; after an imaginary failure in the delivery of a lecture; and over his wife's grave. The writer of the introduction makes the very just observation that it is

"characteristic of men of fine intellect that, when nipt by the autumnal frosts, they manifest excessive testiness on the one hand, and excessive self-reproach on the other; and that when bereaved they arraign themselves, without a jot of justification, of high crimes and misdemeanors against the lost one. I have seen an eminent but aged man of science in a fever of distress until he had written a letter of apology to a servant maid, to whom he had, not without warrant, said a sharp word; and I have had to listen to an exemplary husband vaguely, but piteously, recounting imaginary atrocities to his departed spouse."

His wife noticed Carlyle's love of self-accusation and tried to laugh him out of it. Froude was misled by it into thinking that Carlyle had been a great sinner against his wife. It is a characteristic trait, and, we may add, throws light on Carlyle's writing as well as on his domestic life. It is this violence of language, this exaggeration of expression, which tends to deprive his later style of light and shade, and makes him so strong in his vocabulary of objurgation. All this part of the introduction is original and clear. It is when the writer comes to discuss Mrs. Carlyle that we feel more doubt.

According to Froude, it was an ill-assorted match, and the faults were on Carlyle's side; according to Sir James Crichton-Browne, it was a natural enough marriage, and if everything did not go smoothly, the faults were greatly on Mrs. Carlyle's side. As to their difference in station, he does not think it amounted to much; at any rate, it is ridiculous to impute this as a fault to Carlyle, whom she married from "ambition." As to his barbarity in taking his wife to Craigenputtock (of which Froude gives such an unlovely description), it was no "desert," though she called it one (she, too, acquired a taste for exaggeration), but a "wildly beautiful place," and, moreover, "a perfect sanatorium for a case like hers"—*i. e.*, for a nervous subject. If she took part in household drudgery, it was unnecessary, for they had a servant; if she milked the cows, she need not have done so, as there were plenty of milkmaids within call; she herself expressed perfect content with her life there.

Having thus disposed of the Froudian Craigenputtock legend, the story carries us to London, where the "Ashburton Episode" is discussed. A widespread impression has been created that Carlyle at this

time gave his wife grave ground for jealousy. This idea seems to have for its chief support the evidence of Miss Geraldine Jewsbury, a not very weighty witness; but jealousy there undoubtedly was, and "as jealousy is a malignant and metastatic growth, we need not be surprised to find her soon giving way to more unworthy suspicions, and to bitterness and despondency."

All this is very fair and the introduction is thus far convincing, but we think it goes too far in undertaking an analysis and explanation of Mrs. Carlyle's frame of mind which relieves Carlyle of Froude's imputations only by casting a melancholy shade over his wife. In plain English, she suffered at this time from "mental disturbance," which would be technically called "on its psychical side climacteric melancholia, and on its physical side neurasthenia." For several years pain and sleeplessness had led her to take morphia, and "it is a secondary action" of this drug "to induce unfounded suspicions and even delusions of persecution in those who habitually indulge in it." She also was addicted to "excessive tea-bibbing," and smoked cigarettes. Hence a nervous breakdown at a critical period of life was to have been expected. This nervous breakdown, accompanied by "delusional beliefs," was coincident with the appearance of Lady Ashburton on the scene. There were also, but, as we understand it, at a later period, "suicidal promptings" as the "only escape from insanity."

This medical autopsy on poor Mrs. Carlyle's mind does not produce exactly the impression intended. A doubt will intrude itself, how much real relevancy has all this to the question at hand? Of course, it has a bearing on the value of what Mrs. Carlyle herself says, but it does not at all disprove the fact, if it is a fact, that Carlyle was excessively fascinated by Lady Ashburton. This ought to be disproved, if it is to be disproved, by some independent testimony. The evidence adduced here is unsatisfactory and inconclusive. The controversy over these graves illustrates the difficulty of all attempts to reconstitute the intimacy of conjugal life for the benefit of the public. When we read Mrs. Carlyle's lively letters, as when we read the journal of her husband, we are almost satisfied to leave it all as we find it. Short of the judgment-seat, such an inquiry as Sir James Crichton-Browne has proposed to himself will not be absolutely final. Nor can the reader help reflecting that nine-tenths of the differences which arose between Carlyle and his wife are much like nine-tenths of the differences which arise in a thousand households, and which really mean far less between closely united husbands and wives than they would between human beings less bound to one another.

We have spoken at length of the introduction, because it furnishes a framework for the letters, and is a sort of brief, for which they supply the documentary evidence. Mrs. Carlyle was a born letter-writer, and no one can take up these volumes without finding in them something amusing, witty, gay and original. With all their strength, they are thoroughly feminine. In her notebook she jots down among her memorabilia that "letters are of the neuter gender," but she spent her life in disproving it. A great number of them possess no particular interest; but this, as the introduction explains, was to be expected.

HIGGINSON'S WHITTIER.

John Greenleaf Whittier. By Thomas Wentworth Higginson. (English Men of Letters.) The Macmillan Co. 1902.

The writer of this book can have had no thought of its superseding Mr. Pickard's admirable life of Whittier, a model of biographical sincerity. There is cordial recognition of the importance of Pickard's volumes, and many apt resorts to them for illustrative material. It is conceivable that Mr. Higginson might have had his English readers more in mind, the book appearing in an English series, and been more careful to instruct their ignorance. Actually, he makes his appeal preëminently to American readers, and, modestly anxious lest he should tell them what they know already, he is more sparing of detail than was to have been expected in a book that takes its place in a series which, while aiming at brevity, aims also at completeness. The fact that he was for several years a preacher in Newburyport and hence Whittier's neighbor, not to speak of many subsequent visits, preserves his account of Whittier's local environment from being a mere matter of hearsay. In his familiarity with Whittier's anti-slavery connection he has a more than compensating advantage for his lack of that which gave the 'Longfellow' its local charm. Indeed, the principal interest of his book is concentrated in the three chapters which cover Whittier's anti-slavery career, "Enlistment for Life," "The School of Mobs," and "A Division in the Ranks." Preceding these we have chapters on childhood and school days, and "Whittier as a Politician."

Mr. Higginson makes no attempt to soften the harshness of the "surprising revelation" of the Pickard book concerning Whittier's early political doings and affiliations, though his briefer exposition tends to minimize the effect of that revelation. One finds it difficult to keep the poet's anti-slavery service from being infected with a taint of unreality by those doings and affiliations. Mr. Higginson is silent about Whittier's withdrawal from professional politics in 1843, when a Congressional election was fairly within reach, but the state of his health issued an interdict that could not be reversed—whence it would seem that his ill health quite as much as his anti-slavery spirit was his good providence, for had he, in 1843, entered on a successful political career, it is hardly possible that we should have had that part of his message which has most endeared him to the world. Mr. Higginson invites us to see that the gift of political management, "which at first seemed to threaten him with danger, became, in its gradual development a real service to the cause of freedom." The support of this view is slight enough, while it is quite certain that, had he remained "inside politics," he would have become subdued to what he worked in to a lamentable and ruinous degree, for all his stout adhesion to the anti-slavery side.

Turning to the chapters which reflect this most vividly, we find at the outset some confusion of dates, that of the publication of Whittier's poem "To William Lloyd Garrison" being given as 1831 (p. 48), and on the next page his letter to Garrison, replying to an invitation to attend the American Anti-Slavery Convention, being also dated 1831, for 1832, 1833 respectively. Whittier's own account of that convention serves Mr. Higginson as an excellent *mémoire*, and, with a subsequent page of Whittier's on the persecution of the Quakers, gives a better impression of the poet's prose than Mr. Higginson's critical comment on its general character. The fact appears to be that his prose style was best when he was thinking least how he could make it fine. Whittier's experience of pro-slavery mobs is detailed in a very interesting chapter. His biographer was less called to veil with anonymity "one of the most eminent of Boston philanthropists" who not many years since called George Thompson "a foreign carpet-bagger," in view of Dr. Hale's recent reversion to that note in his 'Recollections of a Hundred Years.' To find two of Webster's nieces, daughters of Ezekiel, at one of Whittier's most mob-distinguished New Hampshire meetings, is a conjunction of extreme felicity. The chapter treating of the division in the anti-slavery ranks attempts to hold a just balance for the weighing of the merits of the controversy whose ashes are still warm. Hardly would one infer that Mr. Higginson's sympathy with Garrison's disunionism was as pronounced as possible. He gives us momentary pause when he writes that Whittier was "more strictly executive than Garrison," but his book contains no page of greater interest than that describing the relations of the Garrisonians and Liberty Party men and their different qualities. He says:

> "It must be owned, in viewing the attitude of these two dividing factions, that the Disunionists were in general the more interesting class personally and more eloquent in speech than their voting brethren, precisely because they could speak without the slightest reference to policy or organization; and that the very leaders of the latter, such as Whittier and Samuel E. Sewall, happened to have no gift of platform eloquence, though much faculty of organizing and conciliating; that the very fact of the entanglement of voting abolitionists with party leaders who never thoroughly belonged with them, such as Clay and Van Buren, was an embarrassment and a hindrance; and, finally, that the immense and unflinching weight of the women as non-voters was thrown on the side of Garrison and his party."

The comparison of Whittier with Garrison is continued in the chapter on Whittier's personal qualities. "Step by step, Whittier saw his own political opinions established; while Garrison lived to be content with seeing his specific counsels set aside, and his aims accomplished by other methods than his own." The comparison is more rhetorical than real. The methods of war were as little Whittier's as Garrison's. The method of disunion was Garrison's, not Whittier's, and it was the method by which slavery was destroyed. And why should not Garrison "join in the chorus of triumph over the reëstablishment of the Union," when it was a Union without slavery, while the political party with which Whittier finally allied himself withdrew, not only from the abolitionist attack on slavery in the States, but also from the Liberty Party attack on slavery in the District of Columbia, and fell silent in its platforms of 1856 and 1860 with regard to the Fugitive Slave Law?

"Whittier at Home" affords a pleasant

chapter. We read of his liking for Rossetti's "Sister Helen," and of its enhancement by his recollection of his mother's burning the waxen image of a clergyman in the hope of compassing his death and sending him to hell. His religious conservatism, which prevented his attending the marriage of a Friend who married "out of the Society," was paralleled by Emerson's injunction upon Fredrika Bremer, when she proposed to give a sample of Swedish music: "No, Miss Bremer, it is Sunday evening; I would rather not." Whittier's general religious attitude and his particular relation to the Society of Friends are made sufficiently clear. The whole of "My Birthday" is given as the final illustration (the first stanza marred by misprints in the third and fourth lines). "Early Loves and Love Poetry" is a chapter-title that covers abundant witness to Whittier's sensibility to the loveliness of woman, with some discussion of the mooted points in his heart's history.

A single chapter on "Whittier the Poet" may seem scanty treatment of what is most important, but it is not as if this chapter had not much support from several of those preceding it. Mr. Higginson remarks our ignorance of the origin and shaping of Whittier's poems, and his "gain in all ways from the strong tonic of the anti-slavery agitation," which trained him in simplicity and directness, and made him permanently high-minded. There appears to be much more self-disclosure in his verse than there was in his conversation. He had no knowledge of music, and could be induced by his "fool friends" to change his most musical lines for those less so, as,

"Pulse o' the midnight beating slow"

to

"Like the night's pulse, beating slow."

As compiler with Samuel Longfellow of 'Thalatta,' we expect, and not in vain, Mr. Higginson's pleasure in the salt breath of the sea which blows through Whittier's verse. How he differed here from other poets is well exhibited; his defects of execution are allowed; his sure feeling for the value of proper names is emphasized; and other traits get their due word. As to Whittier's vogue as hymn-writer, it might have been said that he owes it mainly to Samuel Longfellow's extraction of hymns from his longer poems, and that not one of Whittier's intentional hymns is ever sung. For Whittier's general relation to New England, Mr. Higginson goes to Mr. Stedman. What he brings away is admirable, but nowhere would we more willingly have heard him speaking in his own voice than here.

CONGO STATE HORRORS.

Civilization in Congoland: A Story of International Wrong-doing. By H. R. Fox Bourne. London: P. S. King & Son. 1902. Map. 8vo. pp. xvi. 311.

This history of the Independent State of the Congo is told from a single point of view. The two main objects for which the State was founded by the Powers at the Berlin International Conference of 1884-'85 were to secure freedom of trade and to protect the natives in the Congo Basin. The aim of Mr. Fox Bourne is to show that these ends have been completely lost sight of in the attempt to make the enterprise a financial success. With copious extracts from official documents, accounts of travellers, missionaries and agents, he traces the successive steps by which free trade has been abandoned and the State has become a huge monopoly—its sovereign being "the biggest ivory and rubber merchant in the world." Foreign traders have been practically driven out, and the whole territory has been divided for exploitation between the State and half-a-dozen Belgian companies. In carrying out this purely commercial policy the natives have been ruthlessly deprived of their natural rights. They are no longer permitted to gather "any products of the forests and the plains, which are the common property of their tribes, and in which their forefathers from all time have enjoyed every freedom, have hunted unhindered, and have gathered the juice of the palm tree, the sap of the rubber vine, and any and all other products which abound in the country." Not only are they deprived of their natural rights in the land outside of their villages, but they are practically enslaved through the exaction of a tribute in rubber. The collection of this tribute in some districts is the duty of the *force publique*, a body of State troops composed largely of ferocious cannibals. The accounts of the atrocities of these savages (under the command of white officers) committed in the discharge of this duty, would be absolutely unbelievable were they not vouched for by the unimpeachable evidence of numerous trustworthy white eyewitnesses. Similar evidence is given to show that the much-vaunted anti-slavery crusades against the Arabs degenerated into mere filibustering expeditions, having for their sole object the extension of the authority of the State. The condition of the natives of these regions in many instances (not in all, as the testimony of Sir Harry Johnston recently quoted by us shows) is far worse under their new rulers than it had been under their slaveholding lords. The Arabs introduced a measure of civilization which the Belgian troops destroyed and did not replace. To meet the expenses of these expeditions, the Government legalized a system of *prestations* or levies, apparently chiefly of forced labor, which, with the rubber tribute, became the rule and authority for every sort of oppression and extortion.

The present condition, then, as regards the fundamental reasons for the existence of the State, is this: Absolute free trade has been abandoned, with the consent of the Powers, on the plea that import duties were indispensable for administrative needs. But there has been little or no development of the vast agricultural resources of the country. On the contrary, there are unmistakable signs of a decrease of all native industries save the collection of rubber and ivory. For instance, the exports of coffee have declined from a value of over $200,000 in 1889 to $12,000 in 1901, though in the same period the forced rubber tribute has risen from $400,000 to nearly nine millions. In regard to the protection of the natives, it is enough to say that the fear of the Belgians is driving them from their old homes on the natural highways of their country, the rivers, into the impenetrable forests. A comparatively recent traveller on the Congo writes that he did not see a single purely native village on its banks between Stanley Pool and Stanley Falls, a distance of a thousand miles. A similar statement has been made within a few weeks respecting its great southern tributary, the Kasai, by an American missionary, the Rev. William Morrison, who has just finished a term of six years' service in that region. His homeward voyage of eight hundred miles on this stream was through a country formerly thickly dotted with villages, but now containing less than a dozen. Even more terrible is the fact, of which there can be little doubt, that, through the employment of cannibals, cannibalism is on the increase, notwithstanding its prohibition by decree. The natives have learned, to use the words of a former Belgian official, "that human flesh is useful as an article of food." But the evils of this commercial policy are not confined to the Congo State. The enormous dividends of the privileged companies—those of the Abir, in which King Leopold's shares were valued in 1902 at over five million dollars, in 1899 and the two following years were 270, 470, and 245 per cent. respectively—have led the French to institute the same system in their Congo territory. They have parcelled out more than half of it within the last three years into huge concessions among upwards of forty companies. "It is significant that these companies, albeit French in name, have been mainly instigated and encouraged by Colonel Thys and other Belgian promoters." Then a grave menace to the life of the State itself is the training a great body of savages in the methods of civilized warfare, and providing them with the necessary arms. In addition, according to the testimony of the acting head of the American Presbyterian mission on the Kasai, the State "habitually arms, whenever it deems necessary, thousands of auxiliaries, cannibals for choice!"

The unprejudiced reader of this volume cannot escape the conviction that Mr. Fox Bourne has proved his case. It is true that he has made some mistakes. We have detected a few unimportant errors in his figures on page 251, and on page 33 he gives a wrong date for Mr. Stanley's second Congo expedition. He has at times relied on untrustworthy testimony. If it be objected that he draws too dark a picture and makes little or no reference to the progress of some districts near the coast, it should be remembered that he is not writing a general history of the State, but is simply striving to show that it is not even attempting to accomplish the ends for which it was established. The subject is not a new one to him, but his book is the culmination of a series of efforts in the past few years, as the secretary of the Aborigines Protection Society, to arouse his countrymen, by appeals to Parliament and public meetings, to a sense of the wrongs of the Congo native.

The line of defence against these charges is perhaps sufficiently indicated by quoting the words of King Leopold last January, in response to an address by a committee of the British Baptist Missionary Society. After asserting that, "of course, we pay and treat well the working natives," he goes on to say: "You know that there is no perfection on earth. I know, too, that, although much remains to be done, great progress has been made in the Congo under my rule, and we cannot expect to reclaim at once a

race from centuries of barbarism. It is impossible to bring about a state of perfect civilization in a few years." In other words, the numberless crimes against humanity committed by his agents are but the regrettable incidents which inevitably accompany every attempt to reclaim a barbarous race. But the word "international" in his title shows that Mr. Fox Bourne places the ultimate responsibility for this "wrong-doing," not on the King, but on the nations whose representatives gave him absolute power over a territory 900,000 square miles in extent, with a population of thirty millions. And the nation upon whom the chief responsibility rests is the United States. This country was the first "to recognize the flag of the International African Association as the flag of a friendly Government." By this action it practically put an end to the attempt of Great Britain to secure absolute freedom in the navigation of the Congo, as well as the suppression of every form of slavery, through a treaty with Portugal, the only Power then interested. Some time after this our representative, Mr. Kasson, at the second meeting of the Berlin Conference, said in reference to this recognition that the President sanctioned it because he believed that through the Association "the enormity of the slave traffic will be suppressed, that the blacks will learn from it that the civilization and the dominion of the white man mean for them peace and freedom, and the development of useful commerce, free to all the world." This Government, then, should take the lead in an effort to secure the reassembling of representatives of the Powers who formed the Berlin and Brussels Conferences for the purpose of considering radical measures by which these ends may be reached.

A Book of the Country and the Garden. By H. M. Batson. E. P. Dutton & Co. 1903.

The unpleasant pictures of the swine on pages 21 and 216 of this book, and the more unpleasant illustration of "agricultural depression" on page 259, certainly prejudice the reader. These engravings and a number of others scattered through the volume are decidedly unattractive, and lead one to think that a vein of coarseness must run through the text. The exact contrary is the case. The account of the Garden and of the Country Around, beginning in March and closing with the end of February, is refined and truthful in touch, and fascinating in style. The author has come with her brother to live in a cottage near the manor house and estate which should have been his, but which, by the will of a capricious testator, has fallen into other hands. Around this cottage a garden is slowly formed, and its mode of growth is interestingly described. The author appears to be thoroughly acquainted with numerous books on garden-planning and garden-keeping, and also knows well the class of garden books of which we may take 'Elisabeth and her German Garden' and Alfred Austin's 'Garden That I Love' as conspicuous examples. In the author's garden, planned to suit herself and to provide quiet walks for her brother, a student of philosophy, the resources of the gardener's art are somewhat severely taxed, and with good results. The twelve months go by with their changing outdoor cares and pleasures. The calendar is instructive, especially for its independence. A good many amateur gardeners can take timely hints from the story of the successes and the failures. The account is given with frankness and in good taste, and is encouraging rather than disheartening.

Now on this somewhat tangled thread of the story of a garden the author twists most gracefully the slender threads of two or three pleasant love stories. Two of these have been elsewhere given by her, but they were too pretty to be lost in the pages of old magazines. In one of these stories she brings the owner of the manor house (which should have been her brother's) to make a birthday call, on her coming of age.

"Magdalen stepped up the straight path and demanded to see Jim and me.

" 'I am of age to-day,' she said. 'I am eighteen and I may do as I like. I want you to let me know you: I want to be friends. I am of age and my own mistress, and I have been longing for it just that I might come to you. You won't send me away?'

"There was a suspicious break in the fresh young voice, and I kissed her, and I am sure that Jim would have liked to kiss her, too. The feud was at an end from that moment, and even the intolerable mother, when we went home that morning with Magdalen, tried to pretend that it had never existed. . . . Hardly a day passes that she does not come to us or we to her, and I have known her secret long ago, though she had never told it. But Jim, being a man, is stupid at seeing, or, if he sees, he keeps his counsel well."

The counsel is well kept until the closing paragraph of the book. Another story, that of Meschach's treasure, is charmingly told. We can give only its ending.

" 'I think you might find it just here.'

" 'But I have looked just there. I've dug it all up. I don't believe there isn't no treasure. Is there, Nancy?'

" 'Not if you think there isn't, Meschach.'

" 'He said it was under that apple tree.'

" 'Well?'

" 'And there's nothing under the apple tree.'

" 'Nothing, Meschach, except me.'

"Meschach looked at her stupidly for the space of a minute, and then a great light spread over his honest countenance. He caught naughty Nancy in his arms. 'My pretty dear,' he cried."

Petunia's story is almost as good as these. Other digressions—for instance, the account of the old and the new vicar, the shudders caused by two terrible children, and the recital of the attempted revival of old-time country customs and Christmas mummers' play—add much interest to this volume.

The American Vignola: Part I., The Five Orders. By William R. Ware, Professor of Architecture in Columbia University. Boston: The American Architect and Building News Co. 1902. Thin quarto, pp. vii, 46, eighteen plates.

Professor Ware supplies an interesting preface made up in part of his personal reminiscences. He gives also the names of some of his assistants and his authorities, and the reasons for his decision to call his book after the famous sixteenth-century architect and critic. He holds that there are readier ways of laying out classical and neo-classical orders than by constant reference to 'Modules and Minutes,' and quotes his own master, Richard Hunt, in that connection. The forty-six pages of text, pretty well crowded with illustrations, to which a very wide margin is given up in a sensible fashion, begin with a brief analytic explanation of why a building is what it is, and how its principal details come into being and take shape. We note here the assumption that all buildings are classical buildings. But for this impression, common in the architectural schools of the day, we should not have the "beam that spans the space between two piers or columns and the like," called an architrave or epistyle. The word lintel is ignored, and the constructional member is merged in the architectural member which often, though not always, even in classical work, becomes identified with it. So we should not have the top member of a cornice called the corona, a term which is exclusively classical in the architectural sense; but these and other failures to be precise come from the strong and over-mastering desire to be concise. The statement that a cornice comes of projecting the wall at the top to support the overhang of the roof is true about half the time only, and this and other such failures in logic are also to be charged up to the general discredit of brevity in composition.

As Plate One deals with mouldings, so the first division of the text, after the introduction, is devoted to that subject. The mouldings illustrated and described are all Greco-Roman or modern classic, with the exception of a single figure in the text. The second division of the text is devoted to "The Orders," with text illustrations, and to this succeeds immediately the description of Plate Two, which has to do with Vignola's comparison of the orders, five of them plus the Greek-Doric. The plates from Three to Fifteen are devoted to the different orders, and have each a brief text. There follow two plates of details and one of "Superposition and Intercolumniation," and the book closes thus with its eighteen plates.

It will be seen at once that the small treatise is intended for the students of our modern architectural schools. There is a world apart which these schools represent—a world of paper architecture in which designs are made flat, and in which exultation over a clever drawing is quite equal to that which the practising man feels in a working structure of merit. Professor Ware is not to blame for this state of things; and it is quite within the scope of his right and duty to produce one more manual for the students who fill his own and other classes—the men who are studying architecture as a profession.

The Economic Interpretation of History. By Edwin R. A. Seligman. Macmillan Co. 1902. Pp. ix., 166.

Nothing is more significant in recent economic and historical work than the keen interest aroused by the phrase "the economic interpretation of history." The agitation of the "pure" historians has its counterpart among those economists who are desirous of saving us from "historical materialism." Those who have followed the controversy are beginning to realize the force of Mark Pattison's assertion that it is not "as a question of literature, but as the first condition of practical wisdom, that the

interpretation of history presses upon the attention." We are obtaining a body of undeniable generalizations of social facts, and the philosophical historian is no longer under the imputation of employing an hypothesis as the basis of his reasonings. Professor Seligman's book is notable reflection of the progress of scientific interest in this direction, and his work is an indication that the question is no longer one of mere theory, but an eminently practical speculation from which we are to obtain a real enlightenment of the practical judgment.

But it is not easy to discover just how fruitful Professor Seligman finds this particular explanation. He takes pains to impress us with the fact that "an" should be substituted for "the," and that we have but a relative, not an absolute, explanation of the "niceties of human development." At one moment we are impressed with the author's admiration of Marx's analysis of industrial society and his economic interpretation of history; then, from a desire to save "the spiritual factors of history," we get some queer reflections that relegate this interpretation to the archæologists; and finally, with a confusing interchange of the phrases "historical materialism" and "economic interpretation of history," we have a sketchy chapter on "exaggerations of the theory," that fails to give a clear conception of that doctrine "in a sublimated form" which "contains so large an element of truth and which has done so much for the progress of science."

Nothing is more inexcusable than the linking together of Brooks Adams and Professor Patten as copartners in "invalid applications of the theory." Neither of these writers has anything in common with the Marxian view, nor can they be dismissed as simply fanatics or over-enthusiastic advocates. Furthermore, Adams, with his solar-energy theory, has a radically different point of view from Patten, who insists that, although economic conditions are the primary source from which all elements of national character arise, it is a mistake to think that the national character is nothing more than the ruling motives of the economic world. Adams is frankly physical-economic, while Patten argues for the play of the psychical in economic development.

Professor Seligman also attributes a belief in "historical materialism" to Belfort Bax, and insists that his efforts have not met the great objection "that the theory of economic interpretation neglects the ethical and spiritual forces in history." Mr. Bax's views are clearly revealed in "The Materialistic Doctrine of History" in 'Outspoken Essays,' where he says:

"I maintain that no sort of demonstration has been given of the possibility of resolving any single epoch-making speculative, moral, or æsthetic conception into being the product of *mere* economic circumstance. This may enter into it and modify it in its realization, but it has never been shown that it can explain it more than partially. The same remark applies to any historical period or event. This, too, has never been *exhaustively* explained as a product of past or present conditions, although in certain cases I admit it may be sufficiently so for practical purposes. Just as society has a distinct economical development, so it has also a distinct psychological development; the interaction of these two lines of causation giving us social evolution in the concrete" (p. 50).

If Bax is an "historical materialist," what then does the phrase mean?

In his overestimation of Marx, Professor Seligman has failed to make clear the meaning of the literature of the economic interpretation of history. Whatever historical materialism may have been in the hands of the scientific Socialists, it has nothing in common with what is now called economic interpretation, which emphasizes a radically opposite group of factors, and holds to a rational anti-catastrophic conception of economic change—all of which Professor Seligman regards as an exaggerated application of Marx's theory. Such books as this only prolong the reign of inane language and crude thought that comes from such reflections as those of Mr. Kidd over "the meaning of the causes" for which our "civilization has wrought and suffered for a thousand years."

The Household of Faith: Portraits and Essays. By George W. E. Russell. New York: Edwin S. Gorham. 1902.

In an earlier work which had some circulation in this country, 'Collections and Recollections,' Mr. Russell gave his readers a series of amusing reminiscences such as would naturally be at the command of one who has spent his life in close intimacy with the best English political society of the last century. One of the essays in that volume, the paper on Cardinal Manning, has been reprinted in the present collection, to which it is better suited. Mr. Russell's title is Lightfoot's translation of St. Paul's phrase, τοὺς οἰκείους τῆς πίστεως, and in it he includes laymen as well as church dignitaries who have led religious thought in England along the lines laid down by the Tractarians in the thirties. All the essays have been printed before, partly in the *Nineteenth Century*, partly in the *Pilot*. To one who reads them consecutively in their present form, they are impressive as a singular testimony to the religious life of England during the past sixty years. To the student of theological history they are a valuable summary of the problems of doctrine and of discipline that have shaken the Church of England since her convalescence from the "Roman fever" of early Victorian days.

About half the essays are biographical notices of great Churchmen such as Archbishop Benson and Bishop King of Lincoln, or of certain saintly and distinguished laymen like Mr. Gladstone and Theodore Talbot, those two "young men of great possessions" whose ruling passion was the Church and the *haute politique* of the Church. That is the chain which binds together all these men, of whom Mr. Russell writes with enthusiasm and eloquence. He has well earned the derisive title of "Prolocutor of the Catholic Revival" bestowed on him by Sir William Harcourt in 1899, and we imagine that the republication of these studies in a form that will appeal to a wider public is a sort of challenge called forth by the recent Kensit agitation. Ritualism had been allowed to develop in peace, and had quietly superseded evangelicalism, when the late Mr. Kensit rose in his wrath and recalled the persecutions of a generation ago. The Lambeth judgment of Archbishop Temple against incense was a severe blow to Mr. Russell and his friends, and in one of the final essays, "A Mockery, a Delusion, and a Snare," he bitterly contrasts the Temple of 'Essays and Reviews' with Temple the Primate. He considers that the late Archbishop created a crisis by yielding to the "bogus agitation" of Kensit and his followers, and awoke in the High Church party that old hankering after Disestablishment which had been allowed to sleep, at any rate since the famous trial of the Bishop of Lincoln. There is no doubt that the successors of the Tractarians welcomed every movement that severed Church and State and made for Disestablishment. In his essay, "Ritualism and Disestablishment," Mr. Russell quotes Mr. Gladstone as writing in 1874 that the negation by authority of the doctrine of the Real Presence would lead to the disruption of the Church. One of the main objects of the Oxford Movement of 1833 was to shake off state control of the Church.

"The Oxford Movement was, in one of its most important aspects, an attempt to recall men's minds to the conception of the Church of England as a spiritual society holding its essential constitution direct from Christ, and only accidentally allied with the secular state." . . . "Some of the more ardent spirits of the Movement—such as Hurrell Froude—felt the galling fetters of Establishment with special keenness; and, generally speaking, the attitude of the Oxford writers and those who sympathized with them was that of

" 'Watching, not dreading, the despoiler's hand' " (p. 381).

The Ritualists of the sixties and seventies were in favor of Irish Disestablishment, and were even eager to extend the process to England. The Public Worship Regulation Act of 1874 was, as Beaconsfield said, "a bill to put down Ritualism." Once more a loud cry in favor of Disestablishment arose from within the Church.

Mr. Russell's essay on the religious development of Mr. Gladstone is one of the most interesting. One remembers how Cardinal Manning wrote of Gladstone in his old age: "He was nearer to being a clergyman than I was. He was, I believe, as fit for it as I was unfit." Mr. Russell records the fact that though Gladstone gave up his desire to enter holy orders at the bidding of his father, who was bent on his becoming a politician, "he used to denounce, even with vehemence, that overweening exercise of the *patria potestas* which diverts a young man from the course on which his heart is set." Few people, probably, think of Gladstone as the possessor of an essentially artistic temperament, but it is thus that Mr. Russell accounts for his natural taste for ceremonial and his sympathy with the Ritualists. Mr. Russell was present at his deathbed, from which Gladstone sent his farewell message to Oxford: "There is no expression of Christian sympathy which I value more than that of the God-fearing and God-sustaining University of Oxford. I served her, perhaps mistakenly, but to the best of my ability. My most earnest prayers are hers, to the uttermost and to the last."

Next to Mr. Gladstone, Edward King, Bishop of Lincoln, is Mr. Russell's hero and model of saintliness; the essay which describes his career as a Churchman is headed "The Angel of the Church of Lincoln." He tells a good story of young King at Oriel, under the provostship of the formidable Dr. Hawkins. "At the end of King's first term, the Provost called him up to the high table in the College Hall, and, after inspecting the Chapel Register, said, 'It

would appear, Mr. King, that you have attended Divine service in the college chapel twice a day every day since the commencement of the term.' King modestly admitted that it was so, and probably expected a word of praise. But he did not know the Provost, who promptly said, 'Beware, Mr. King, of letting your religion degenerate into a routine. You can go.'"

DRY-POINT ETCHING OF
R. W. EMERSON,
By GUSTAV KRUELL,
331 Main Street, East Orange, N. J.

For Sale.

MAINE COAST.

FOR SALE.—on Penobscot Bay—To settle a joint account—A tract comprising 400 acres of land with nearly 4 miles of shore front. The property comprises a number of bold headlands, fine rocks, coves, and beaches, is much diversified in its surface with woodland, hills and open fields, and commands everywhere most exquisite views of the bay, islands and mountains. The property is on the mainland in a central position and with a general southwest exposure. It is within half an hour by steam launch from the Dark Harbor landing and Christ Church at Islesboro.

This property will be sold at a low price per acre, and offers an exceptional opportunity for a gentleman wishing a large private estate, or for subdivision.

J. MURRAY HOWE & BRADLEE,
28 State Street, Boston, Mass.

ISLESBORO, ME.

FOR SALE.—An unusually beautiful point of land on the west shore facing the Camden Mountains, containing nearly 14 acres, and having nearly half a mile of water front with fine rocks, beaches, and bold shore. The land is diversified with groups of trees, woods, and open fields, and is adapted either for individual use as a whole or for subdivision into several lots.

Contemporary History of Unusual Interest

"One of the most readable books of the year."
Prof. Harry Thurston Peck, Editor of *The Bookman.*

Letters of a Diplomat's Wife

By MARY KING WADDINGTON

New York Evening Post:
"A series of vivacious and clever sketches of things worth seeing and people worth knowing."

New York Tribune:
"It is all very pleasant gossip and kindly gossip by a clever woman guided by good taste."

Hartford Courant:
"Mme. Waddington was socially experienced, and therefore she saw the significant things. She had a very human interest in all she writes about, and that gives the right kind of charm to her vivid notes."

With portraits, scenes, etc. $2.50 net (Postage 20 cents)

THOMAS NELSON PAGE'S New Novel

Gordon Keith

First Edition of 50,000 copies already exhausted; second on the press.

MR. HAMILTON W. MABIE
writing in the *Outlook* says:

"Since the publication of 'Red Rock,' Mr. Page has given us nothing so important as 'Gordon Keith,' a novel of serious purpose and generous dimensions, crowded with actors and full of incident. . . . It is a strong, sincere and deeply interesting novel of character and of manners as well."

The scene includes New York City and Virginia; the period extends from the close of the war well into our own time; the hero is Southern, the heroine a New York girl; the plot is full and interesting; the color has all Mr. Page's accustomed richness.

Illustrated by George Wright. $1.50

The *New York Tribune* compares it with "The Adventures of Harry Richmond."

The Adventures of Harry Revel

By A. T. QUILLER-COUCH

NEW YORK SUN: "Here is not only a careful, but, furthermore, an effective and delightful literary performance. It reminds us of the best things that have been."
NEW YORK TIMES: "A story far out of the common."
ACADEMY OF LITERATURE: "Has all of Mr. Quiller-Couch's quiet and controlled distinction."

$1.50

The Modern Obstacle

By ALICE DUER MILLER

"Brilliant, Sophisticated and Clever."

"The modern obstacle is the lack of money. The situation presented is that of two persons who love each other, but who are too intelligent not to recognize the fact that by taste and cultivation neither of them is equal to a struggle with existence without a guaranteed income large enough to minister to needs made imperative by lifelong custom. Around this situation the author has woven a story as engrossing as it is original in theme and treatment."—*Brooklyn Times.*

$1.50

Old Testament Criticism and the Christian Church

By JOHN E. MCFADYEN, Professor in Knox College, Toronto. $1.50 *net.* (Postage 18 cents)

Professor George P. Fisher of Yale University writes of this book:

"Dr. McFadyen's 'Old Testament Criticism and the Christian Church' rests on an adequate basis of learning, is scholarly without pedantry, is lucid in its arrangement, is temperate and fair-minded in its spirit, and is fitted to instruct not only ordinary Biblical students, but also professional critics."

THE MACMILLAN COMPANY

begs to announce the publication of Volumes I. and III. of

ENGLISH LITERATURE

AN ILLUSTRATED RECORD

BY

RICHARD GARNETT, C.B., LL.D., and EDMUND GOSSE, M.A., LL.D.

IN FOUR VOLUMES

Vol. I.
TO THE AGE OF HENRY VIII.

Vol. II.
TO THE AGE OF MILTON

Vol. III.
TO THE AGE OF JOHNSON

Vol. IV.
TO THE AGE OF TENNYSON

Volumes I. and III. are NOW READY; Volumes II. and IV. will be published in the Autumn.

Cloth 8vo, each volume $6.00 net, on orders for sets only.

*** These four volumes present to the reader an illustrated review of English Literature from the earliest times to the close of the nineteenth century. The authors, who are at once scholars of the highest attainments and masters of the art of concise and luminous exposition, have aimed at producing a book that shall stimulate and gratify curiosity concerning the great writers of their country and the evolution of its literary history. This "illustrated record" will, it is hoped, be welcomed by all who are interested in the study of English Literature as warmly as the illustrated edition of the late John Richard Green's well-known work has been by students of English History. A consecutive history of the entire course of English Literature from Anglo-Saxon times to our own day will be given in one type, so that this, if the reader desires, can be read alone as a narrative of the evolution of English style. In a different type, a biography of each author will be supplied, relating in close detail, and with all necessary dates, the facts of his life. From the works of each leading writer at least one characteristic quotation will be made in a third type, and this will form an anthology of English Literature from the earliest times to our own day.

Volume I. extends from the Anglo-Saxon period to the days of Tyndale and Coverdale, Surrey and Wyatt; Volume II. deals with Elizabethan and Jacobean writers; Volume III. conducts the reader from Milton to Johnson and Goldsmith; and Volume IV. brings the record down to our time. The volumes have been lavishly illustrated. Many hundreds of cuts, chosen after much laborious research, are inserted in the text, there are forty full-page photogravure plates, and thirty plates printed in color.

An important feature of the first volume is the reproduction of richly illuminated mediæval manuscripts. The chapter devoted to Chaucer has been illustrated with exceptional fulness, and the illustrations to the notice of Caxton are of the highest interest. On the subject of miracle plays, ballads, and early Scotch poets and the English Bible, much valuable illustrative matter has been collected.

In the second volume it was, unfortunately, impossible in many instances to give portraits, for the simple reason that they do not exist. No portrait is known of Marlowe or Lyly or Peele or Webster or Ford, to name only a few distinguished dramatists of the Elizabethan age. But wherever authentic portraits are known, they have been reproduced. This was the age of fantastically illustrated engraved title-pages, and in both the second and the early part of the third volume these have been made a special feature. Facsimiles of autograph letters and MSS. in prose and verse have been freely interspersed, nor has topographical illustration been neglected.

When we reach the age of Milton, in the third volume, there is an *embarras de richesse* of illustration; the task becomes one of selection rather than collection. Of Milton himself no fewer than six portraits, representing him from childhood to his sixty-third year, have been engraved; and a similar fulness of portraiture has been accorded to Pope, Johnson, and others. The early part of the third volume contains numerous engravings after Marshall, Lombart, and Faithorne; in the later pages we are among Rowlandson's broad designs and the delicate fancies of Stothard. From the time of Sterne and Goldsmith onwards use has occasionally been made of contemporary caricatures.

In the fourth volume, although the illustrated record may not be so picturesque, yet the abundance and variety of the material will be found to have enabled the publishers to render this volume no less attractive than its predecessors.

A History of English Literature which aims to be scrupulously exact, and yet attractive and amusing. With this view before them, the authors of this illustrated record, who have given a life-study to the movement and progress of English Literature, have prepared this history on entirely new lines.

Published by **THE MACMILLAN COMPANY** 66 Fifth Ave. N. Y.

The Nation.

NEW YORK, THURSDAY, JUNE 4, 1903.

The Week.

Senator Hanna has now a perfectly good excuse for urging the Ohio State Convention to endorse President Roosevelt's renomination. He had said that such action was never taken except in the case of a "favorite son." Well, Mr. Roosevelt has shown that he is Ohio's favorite son. So he is, apparently, of every other State in the West and Northwest, excepting possibly Indiana. At any rate, his renomination is as certain as any future event can be. The disappearance of prosperity might defeat his reelection, but not even that could now prevent his renomination. With this strong assurance his to-day, President Roosevelt should from now on take an even firmer stand as the representative and champion of the people against political schemers. He has no longer any need of stooping to conquer. No further compromise with politicians, no subsequent paltering with principle, can be excused on the ground that it is necessary in order to "keep the party in power"—the party, in that phrase, always meaning the party of the first part, namely, the President himself. One of the greatest perils of our system of party government has long been the temptation of a President to do things of which he was in his heart ashamed, for the sake of renomination. That snare is now removed from before Mr. Roosevelt's feet. The result ought to be to make the remaining months of his Administration reach the highest possible level of fearless devotion to duty, as it is given to the President to see it.

The Cincinnati *Enquirer* publishes what purports to be an interview with the wife of a member of President Roosevelt's Cabinet. The greater part of it consists of Washington gossip too trivial to be noticed, but it offers one political phase which may prove interesting to Gov. Cummins. According to the story, the Governor got a severe rebuke from President Roosevelt, Secretary Root, and Secretary Shaw when he (Gov. Cummins) made his speech in favor of tariff revision. This trio let the Governor know that the so-called "Iowa idea" was un-Republican. If the Governor has since brought about harmony in the party (quoth the interviewed) he must have done so by changing the "idea." This conception of the Administration's position in reference to the tariff coincides with that which persons not in the inner circle had pretty generally formed, but it is not to be inferred that "the Iowa idea" has undergone any change, or that Gov. Cummins has retracted one jot or tittle of his own previous sayings. Nor can such changes take place while the tariff burdens resting upon Western industry continue to weigh upon it. Petitions from makers of agricultural implements calling for relief from the duties on iron and steel and a great variety of articles which have been monopolized by Trusts are now in circulation. They will be presented to Theodore Roosevelt and to the Congress of the United States as soon as the latter comes together in regular or special session. They embody the Iowa idea, and they will disturb the harmony of the party in many places before the delegates are elected to the next national convention.

Mr. Bourke Cockran has been interviewed at Berlin on the subject of Mr. Cleveland's nomination for the Presidency. He is reported as saying that if there is a popular demand for Mr. Cleveland's return to the Presidency strong enough to force his nomination upon the Democratic Convention, that same demand will insure his election, because the opposition to him is strongest in his own party. Mr. Cockran ought to be an authority on the subject of Cleveland's forcing powers, for he went to the Chicago Convention in 1892 as the anti-Cleveland orator of Tammany Hall, and there made a speech, in the name of the solid New York delegation, in which he predicted the loss of the State and the country if Cleveland should be nominated. The same popular demand, however, which forced Cleveland's nomination upon the Convention was strong enough to insure his carrying New York and the country and, if we are not mistaken, the support of the Tammany orator himself. Therefore, Mr. Cockran's sayings on this subject must be considered little less than oracular.

Mr. Cleveland was never more courageous, or more absolutely sound, than when he cautioned the Carnegie Hall meeting last week against a rash arraignment of the Russian Government as responsible for the Kishenev massacre, and reminded his hearers that, in such matters, this stone-throwing country lives in a glass house. His pointing to the wholesale slaughter of Chinamen in Wyoming recalls a shameful event of his first Presidency. Perhaps he had in mind the humiliating reference to it which he was compelled to make in his message to Congress in 1885. He may even have freshly gone over the correspondence of that period between the Chinese Minister and Secretary Bayard. It would do us all good to read it at this juncture. We might take it in place of one of the penitential psalms. The Chinese Minister massed the evidence going to show that the massacre of the subjects of a friendly Power residing in this country was as unprovoked as it was brutal; that the Governor and Prosecuting Attorney of the Territory openly declared that no man could be punished for the crime, though the murderers "attempted no concealment"; and that all the pretended judicial proceedings were a "burlesque." All this Mr. Bayard had to admit, speaking with shame of "the wretched travesty of the forms of justice," of his "indignation at the bloody outrages and shocking wrongs inflicted upon a body of your countrymen," and of his poignant mortification that "such a blot should have been cast upon the record of our Government." Such confession is good for the soul—never more so than when we are about to denounce another Government.

Neither the temporary appearances nor disappearances of bosses are conclusive of anything in particular, and we therefore advise against attaching too much importance to the retirement of Senator Quay from the State Chairmanship of his party in Pennsylvania. This is not necessarily an evidence that he is wearying of the cares of office and leadership. There are times when such men come out into the open, and times when they burrow, and this may be one of the latter. As for the State Convention at Harrisburg last week, it was of the usual Quay sort. As the Philadelphia *Press*, which clearly desires to praise, says: "It was all smooth, easy, decorous—and dull." There was a long platform, but it would have been more interesting if it had been shorter and said more. No mention was made of the press-gag law, which shows that the ridiculousness of Pennypacker has impressed those other eminent statesmen who desired the measure as strongly as he did, but who have not been so unfortunate as to be, like Pennypacker, among its first victims. A State Senator who voted for the gag law was nominated for State Treasurer. This may make the libel statute a feature of the State campaign. It certainly ought to be an issue.

A bill has been introduced in the Michigan Legislature substantially on the lines of the new libel law in Pennsylvania. Like that, it seeks to establish a more drastic rule regarding negligence on the part of newspaper publishers, and provides that the damages to be awarded shall be increased if the libellous matter has been printed with any especial prominence, extra heavy headlines, or cartoons. The bill has not yet

advanced far in the Legislature, but is said to have the favor of certain Michigan leaders who have been lampooned in the newspapers. We have our doubts as to the probable effectiveness of such a law in Michigan. As was pointed out in the case of the Pennsylvania statute, it really goes very little beyond existing law. The peculiar importance of the enactment in the Keystone State was that there they had a Pennypacker to expound and interpret it. As a result, the whole State broke out into a broad smile which has not even yet wholly relaxed. In Michigan, so far as we know, they have no Pennypacker. We fear that their law will fall flat.

The Mayor of Erie, Pa., furnishes a good example of the way to treat a police force determined to run itself, rather than be run by the responsible authorities. It is true that the force at Erie is not large, but it seems to have been imbued with about the same spirit which caused our own guardians of public safety to band together and contribute money in order to install a particular platoon system over the head of their Commissioner. The Erie policemen formed a union and demanded an increase in pay, under threat of resigning in a body. The Mayor promptly took them at their word and let them resign. When they tried to beg off and withdraw their resignations, he declined to permit it, basing his refusal on the ground that their action was incompatible with good discipline. He accordingly appointed new men in the places of the recalcitrants. For the moment, Erie's reorganized police force is not exactly the "finest"—without uniforms and without training—but with such a Mayor it is certain speedily to reach a high grade of efficiency.

The celebration of the two hundred and fiftieth anniversary of the founding of New York city, to which the past week was devoted, was not by any means a failure, but it was not a great popular success. There were some dignified ceremonies at the City Hall, some tasteful decorations some useful special exercises in the public schools. Whatever was officially pertinent to the occasion was officially done, and done rather well. But the general body of citizens went back and forth to their business pretty much as if nothing was happening. Probably it would not have been quite like this in any other city. Abroad there would have been stately and ponderous functions, with plume and helmet, procession and review. If the metropolis of the Central West of our own country could have celebrated such an anniversary, there would have been vast excitement over it, accompanied by a general suspension of business. We may congratulate ourselves, perhaps, that we have avoided vain show and hysteria. But have we not missed something, too, of the elements which go to make up a united community, with a local pride, not vainglorious merely, but really worthy in its nature? How are citizens to be induced to turn even temporarily from their individual absorbing interests to engage in the upbuilding of such a spirit? This is a question which we still have to answer.

Some Southerners profess their readiness to submit to a reduction of Southern representation in Congress in return for the repeal of the Fifteenth Amendment. In a recent address on the occasion of the decoration of the Confederate graves at Port Gibson, in that State, Congressman B. G. Humphreys of Mississippi pronounced the Fifteenth Amendment an incubus put upon the South by the North "in its anger." It is "sapping the liberties" of the South, and the price of a reduced representation in Washington is a cheap one to pay for the abolition of the abhorrent amendment. Mr. Humphreys was born in 1865; there is therefore possibly the excuse of ignorance for him when he says that "it is the declared opinion of all the unprejudiced students of the institution that the negro slave in the Southern States was, as a rule, the best *paid*, the best protected, and certainly the equal in happiness, of any peasantry upon the earth." But such colossal ignorance and misrepresentation should not lead Mr. Humphreys into self-delusion as to the possibility of a repeal of the Fifteenth Amendment. It is in the Constitution to stay, and behind it are the conscience of the North and the memories of the men who died that the Union might live.

Secretary Root's decision to order a court of inquiry to probe further into the charges against Capt. Howze, despite his belief that they are baseless, is strong evidence of his desire to get at the real facts in the case. As the matter now stands, there is a flat contradiction in the testimony. On one side there are Capt. Howze and ten American officers; on the other, Major Hunter and no less than thirty-five affidavits from Filipino witnesses. The latter Mr. Root distrusts because of his belief that "the view generally taken in a large part of the Orient, including the Philippine Islands, as to the sanctity of an oath and the moral obligation to tell the truth in judicial proceedings, varies widely from our own view, and that native testimony to almost any effect without regard to fact can readily be procured by a person interested in procuring it." To examine again Major Hunter's thirty-five witnesses with the object of establishing their credibility is, therefore, the main purpose of the commission of three officers to be appointed at once by Secretary Root. Upon their report will depend the question of a further inquiry into the acts of Capt. Howze.

But Secretary Root does not stop there. He also orders that the investigation made by Major Hunter be investigated in turn to ascertain whether it was the impartial one he should have made in accordance with his rank and his orders from Gen. Miles to make a report upon the alleged cruelties in Laoag. If it then appears, as Mr. Root seems to believe to be the case, that Major Hunter deliberately procured thirty-five Filipinos to swear falsely, deliberately attacked a brother officer because of petty spite, and set afloat apparently well-founded evidence of what Mr. Root terms "revolting cruelty," Major Hunter cannot be brought to book too quickly. Whether it is Major Hunter or Capt. Howze, there is apparently one officer whom the army can afford to do without at an early date. It must be noted in this connection that the testimonials to Capt. Howze which accompany Secretary Root's report are of the highest, and that the Secretary himself believes that Capt. Howze has maintained a high character "as well for humanity as for courage and for all soldierly qualities."

Senator Dryden of New Jersey may well be vexed at the rumor that he contemplates resigning from the Senate on account of his multiplying business affairs. As he intimates in his denial, his critics entirely misunderstand the position of a modern Senator. The more outside interests he has, or represents, the more important it is that he should be in the Senate. A pretty pass we should come to if there were no one in the Senate to defend railroads and trolley lines and mergers of various sorts from unjust attacks. With a President so careless in such matters, it is doubly important that Senators like Mr. Dryden should not desert their post of duty. Of course, their private concerns take up most of their time, and they cannot be expected to make speeches or undergo the drudgery of committee work; but there is always a sprinkling of lawyers in the Senate to attend to that necessary but comparatively unimportant work.

Thursday's melancholy disclosures regarding the condition of the so-called "Shipyard Trust" brought no news to well-informed circles in Wall Street, and perhaps did not surprise the public generally. The Stock Exchange and the "curb," in cutting down their bid for the $45,000,000 preferred and common stock from 68 and 25 respectively to figures such as 4 and 2, gave pretty plain evidence what their opinion was. The troubles of a trust company which had invested in the securities on "inside" terms, and found it impracticable either to sell or to borrow on such collateral,

gave public advertisement of the situation. It has also been suspected for some time that the earning capacity of the new Trust's plant had been greatly overestimated. But the official explanation, which accompanies the plan for reducing capital, goes rather beyond even the most cynical of recent guesses. This statement flatly declares, as regards the "combine's" situation at the time when its stock was offered to the public, that in many of the constituent concerns "where profits had been reported, it was found upon reëxamination that the company had sustained losses instead of making profits." "Reëxamination" strikes us as decidedly innocent. Who made the original examination, and how did the examiners happen to be so obliging as to overlook what the market appears to have suspected all along, and what the "reëxaminers" have discovered with little trouble? It does not appear to us that so shocking a scandal, amounting to a confessed fraud on that portion of the public which was unlucky enough to credit the prospectuses of a year ago, ought to be left without further notice.

The receiver of the Central National Bank of Boston has called a meeting of the directors of that insolvent concern in order to present an ultimatum from the Comptroller of the Currency requiring them to furnish the necessary funds to pay its debts. If this is not done forthwith, the law will take its course. The collateral held by the bank is declared next to worthless, and in one instance a loan nearly equal to the bank's capital is said to have been made on this kind of security. Bank failures are not so rare that the case of the Central National of Boston should excite our special wonder, but all the people are interested in preserving the integrity of the national banking system. To that end the law should be rigidly enforced, including that provision of it which forbids the lending of more than one-tenth of a bank's capital to one person, firm, or corporation, directly or indirectly. The late Hugh McCulloch, a successful banker under the old régime, and later Comptroller of the Currency and Secretary of the Treasury, said in his book, 'Men and Measures of Half a Century,' that all bank failures were due to speculation or to rascality. In his opinion, there could be no excuse for any bank failure whatsoever. That this was a sound opinion may be inferred from the fact that the State Bank of Indiana (composed of thirteen branches) over which he presided, weathered all storms during the thirty years of its existence, which were peculiarly years of stress and danger in the banking world.

The causes of insolvency of national banks, as listed in the annual reports of the Comptroller of the Currency, go far to confirm Mr. McCulloch's saying that failures are due either to speculation or to fraud. The greater part of the failures catalogued from the beginning of the system in 1863 fall in the latter category. Defalcations of officers is usually combined with fraudulent management in other ways, and particularly with excessive loans to directors or their friends. Probably nine-tenths of all the failures recorded are due to this network of causes. Excessive loans and depreciation of securities generally go together in cases where there is no actual fraud. These are cases where the bank takes a risk, *i. e.*, engages in speculation. The framers of the National Bank law were practical bankers, who knew the dangers which beset their vocation. They knew that the temptation to lend money on doubtful security for the sake of extra profit would sometimes be too great for even honest bank managers to resist. In order to minimize such dangers, they inserted a clause in the law which prohibits the lending of more than one-tenth of the bank's capital to one person, firm, or corporation. This is the clause the infraction of which wrecked the Central National of Boston, and a little earlier brought the Seventh National of New York to temporary suspension. The latter was put upon its feet again by the directors, who took the money out of their own pockets voluntarily for this purpose—an example which those of the Boston institution should promptly follow.

It is an old trick of Mr. Chamberlain's to invent his authorities—or, at least, to assert that he is supported by authorities supposed to be against him. Thus, in his Birmingham speech on preferential tariffs, he said:

> "Mr. Cobden did not hesitate to make a treaty of preference and reciprocity with France, and Mr. Bright did not hesitate to approve his action; and I cannot believe, if they had been present among us now and known what this new situation was—I cannot believe that they would have hesitated to make a treaty of preference and reciprocity with our own children."

Upon this it is only necessary to remark that the French treaty was, indeed, one of reciprocity, but was not one of preference. In Morley's 'Life of Cobden' (Vol. ii., p. 291) is given an extract from the speech in which Mr. Gladstone explained the details of the treaty to the House of Commons. In it he declared in so many words, "it is perfectly understood between France and ourselves that we proceed with regard to the *commodities of all countries alike*." On another occasion Mr. Gladstone said: "Our treaty with France was, in fact, a treaty with the world," Mr. Chamberlain's idea of preference and exclusion had no place in the minds of either Cobden, Bright, or Gladstone. They are the last prophets whom Chamberlain ought to summon to bless his own scheme.

Will America retaliate? asks the London *Telegraph*, meaning to inquire whether we will make preferential tariff treaties with other countries than Great Britain in case she discriminates in favor of her own colonies—Canada, for instance. Nobody can tell beforehand what we should do in such a case. There would seem to be little reason for such retaliation on our part, seeing that Great Britain would be merely following our lead. We have conceded protective tariffs to our own producers as high as 100 per cent.—indeed, much higher than that in some instances. It is proposed that Great Britain shall follow our bad example, but on a much lower scale, by granting preferences to British subjects who do not inhabit the United Kingdom. We do not think it at all likely that she will do so foolish a thing, but if she does, we cannot, with any consistency, retaliate upon her for doing what we have done from time immemorial. Yet nobody can make a safe prediction on this score. It will all depend on whether any powerful interest can see an advantage to itself in a higher tariff than we now have, and can muster the necessary votes in Congress to get it. If it can do so, then we may have it, and may call it retaliation on foreigners, although spoliation of Americans would be the true name for it.

The penalty in the case of Huessner, the German ensign who recently killed his lifelong friend, Hartmann, a private of artillery, for failure to salute him properly, is not likely to teach the army or navy to forego any part of their extraordinary and mediæval code of "honor." Yet four years is about the sentence given to Lieut. Brüsewitz, who similarly stabbed a civilian without cause or reason, and who was subsequently pardoned after serving two years. It is not even certain that Huessner will be dismissed from the naval service. Anyhow, his punishment is, in all likelihood, not sufficient to cause the Marine School to alter its magniloquent instructions that an officer shall never draw his sword except to draw blood. Doubtless this was meant to apply to war conditions, but it is quite sufficient to overbalance a crack-brained young officer who in addition has been stuffed with nonsense about the code and "honor," and who sees militarism worshipped as the true god of the nation. One of the most powerful books which have recently appeared in Vienna, deals with the reflections of an officer about to kill himself because he had been jostled by a civilian and had not been able to stab him for the insult. Preposterous as the situation seems, it is the logical flower of military life in Europe.

THE NATION AND THE NEGRO.

It is a pleasure to note that the leading Alabama newspapers are explicit and emphatic in denouncing the system of negro peonage which has lately been unearthed in certain counties of that State. The disgrace is admitted. Severe punishment for those found guilty of the crime against the laws of the United States is called for. The Montgomery *Advertiser*, for example, rejoices that Federal Judge Jones, before whom the cases will come, is not only "a capable and fearless official," but "a Southern man who has the honor of his section deeply at heart. He will use every power under his control to get at the bottom of these cases, and to make examples of the cruel law-breakers involved."

This is as it should be. Still more significant, however, is an expression of the Montgomery *Journal*. After speaking of the gross outrages which had been inflicted upon "ignorant and inoffensive negroes," it declares:

> "Law-abiding people all over Alabama are looking to the Federal court to do what the State courts have tried for many years to do, and failed—failed because the witnesses were either bulldozed or were prevented from testifying before the grand juries for some other unknown reason.
>
> "Certain it is, with full knowledge of the traffic that has been carried on in certain sections of Alabama in what is practically and to all intents and purposes human slavery, and the cruelties that were being practised upon the poor unfortunates, the courts have been unable, after years of effort, to bring the culprits to justice."

Here is an instructive if unwitting confession that the question of justice to the negro is and must be national. It is impossible to treat it as a local, a neighborhood question. This country has such a thing as a national citizenship, with its rights and immunities. It cannot, without stultifying its laws and Constitution, allow any locality to nullify in secret or strike down openly the guarantee which it throws about the humblest. There must be a strong arm of the nation able to reach every violator of the laws which the nation enacts. We see how promptly the plea for being "let alone" falls to the ground in Alabama to-day. The very citizens of that State are thankful for Federal interference to right a great wrong, which the local officers of justice are too weak or too cowardly to deal with themselves.

The evil is of proportions only beginning to be realized. One reason why it has now started into light is that it is spreading. Practised for years without let or hindrance in the "Black Belt" of Alabama, the system of worse than slavery is edging its way even into the uplands, where it was never known before. A great deal was heard of the revolting revelations at Goodwater. This is in Coosa County, and the Coosa *Democrat* says of the crimes laid bare: "We had read of such *at other places in the State*, and knew the serious result that the culture and growth of crookedness must bring to any people. Goodwater will ever suffer from this, but the innocent should be spared, and the name of Coosa should not be mixed and besmirched with a matter that her citizens have all along heartily condemned."

It is of the utmost importance that the extent and nature of these crimes against humanity and the laws should be publicly understood. Only a fragment of the truth has so far been told. We are informed that affidavits are in existence proving not only illegality, but cruelty of the most shocking description. Negroes are both compelled to work under guards, being shut up in what is practically a prison at night, and are flogged to their work after the worst style of the plantation in the days of slavery. Slaves at least used to be fed and housed and clothed, after a fashion; but these new Alabama slaves are sometimes worked naked and barely kept from starvation. And all, be it remembered, owing to a conspiracy between the officers of the law and heartless employers. First, the ignorant and friendless negro is arrested on some flimsy or trumped-up charge; then he is fined to the full limit of the statute, then sold at hard labor, and kept in the most abject form of slavery long after his fine and costs have been worked out and there no longer exists even a pretence of an unexecuted sentence of a court hanging over him.

Why has it been left for Federal officials to bring these horrors to public notice for redress? Has not Alabama thousands of humane and public-spirited citizens who loathe such injustice? Ah, here we come again upon that blight which slavery cast over the South. Think of a country, said Emerson before the war, without a minority, with only one opinion. There is an artificial solidarity in the South, as relates to all questions affecting the negro's rights. Honest men dare not protest against what they know to be cruel wrongs to the negro, lest they be at once accused of being disloyal to their section, or even of being willing to encourage "social equality" with colored men. That is the taunt which dries up the protests of Southern men against outrages upon the negro. Privately, they writhe under the blot upon their State, but publicly they lift no voice. Hence it is that such a stain upon our civilization as the wholesale forcing back of negroes into slavery could be perfectly well known in the South, with no attempt made to wipe it off. Who shall say, in view of these facts, that the nation has not a duty in the premises? When its citizens are imposed upon and maltreated, in clear violation of Federal laws, as also when their solemnly pledged political rights are trampled upon, it is for the nation with a big N to assert its majesty and its power. What comes of listening to the lotos-eating cry, "Let us alone,' we see from the frightful wrongs of which Alabama to-day stands confessing herself guilty, though powerless to redress them.

THE POST-OFFICE INQUIRY.

Mr. Charles Emory Smith's much-heralded "denial" of the Tulloch charges is likely to please no one except Mr. Payne. A large part of it consists in admitting that, under the stress of war, unusual, not to say illegal, methods were resorted to. "Red tape of form" was not allowed to stand in the way of the "good of the service." Moreover, Mr. Smith concedes that in some cases of "irregularities" he was "not convinced of the necessity or propriety of the transactions." These questionable actions, Mr. Smith states, were the employment of unnecessary persons. If this is disposing of Mr. Tulloch, we need a new definition of refutation.

Mr. Payne's anxiety to refute Mr. Tulloch and to reflect upon him, his complete adoption of Mr. Smith's unsatisfactory letter, his apparent desire to shield Perry Heath, will strengthen a rapidly growing feeling that the Department is not willing to let daylight into its every nook and cranny. There is a strong belief, too, that Machen and Beavers are to be made the scapegoats, and Tulloch brushed aside, while other offenders go free and Mr. Perry S. Heath is suppressed lest his injudicious tongue give some insiders away. Why all this sudden talk about the benefits to accrue from the investigation? Why this remarkable announcement that, thanks to this scandal, the Post-office Department will be self-supporting in the fiscal year 1903-1904? If this long desired result is really to come about, thanks to anonymous letter-writters, to Tulloch, to Machen, and to Beavers, why not sing a hymn of praise to them? Is it that the approaching return to Washington of the Rough Rider has reminded Mr. Payne that it is well to have a credit account as well as a debit upon the books of his official career?

It will not do to toss aside the revelations of rottenness at Washington with our easy American good nature. Our temptation will be simply to say, "Oh, there were scoundrels before Machen; there were boneless Postmasters-General before Payne"; and so dismiss it all. Not so do we treat plain symptoms of grave disease. And badly diseased our public life must be to admit of so noxious a growth of fraud attaining such an extent unperceived. The first duty is, of course, to run down the rascals. They and all their crew must be made to see that the jails are yawning for them. Personal or political influence should be allowed to spare no guilty man. But, while hunting the thieves, is it not our business also to ask how this particular set of thieves came to be entrenched in the public service?

It is no chance coincidence which con-

nects "get-rich-quick" concerns with the postal scandals. Bribes were paid to allow such fraudulent enterprises to use the mails; but was not the whole idea of the criminals in the Department to get rich quick, and to prostitute office to do so? "Get rich, my son; honestly, if you can—but get rich." As Bishop McVickar said last week, it is this lust for money which accounts for a large part of our political corruption. All the way up from the primary to the very room of the Committee on Ways and Means of the House, "graft" aspires to lay its greedy hands. To make merchandise of office, to strive to get one's fingers somehow into the bottomless purse of the Government—that is the fundamental vice. The wretched Machen is no more guilty than Senators who have bought their seats, or committees on the tariff that sell legislation for a price. They are all a part of one unclean system. It would make barter of every office, and turn the whole public service into an auction—positions and favors going to the highest bidder.

The mad rush for wealth would not alone account for what we are seeing at Washington. That old weakness of human nature is artfuly allied with our party practices. This is the solemn truth for us to bear in mind. It is the spoils system in full flower which gives us Machen and his confederates. Many of the latter are really Congressmen. What, would we charge Congressmen with stealing? No, not money; but positions and favors, yes. They have been in league with the superintendent of the free-delivery service to secure appointments, and to spend more money than was appropriated. That was not strictly honest. That was not transacting Government business with the same fidelity as your own. The "rake-off" of the Congressman was in offices and appropriations. By granting those freely, Machen thought to fortify himself against any possible legislative interference. But what wonder if he went a step further and took his own "rake-off" on Government contracts? That was only a shade more dishonest than the use of office for personal or party reward. What is the real moral difference between creating a useless office and putting in it a man whom you expect to work for you, not for the Government, and paying extravagant prices for articles used in the public service, while quietly pocketing your commission on them? We confess we see very little.

An entire reform of our theory and practice of appointment to office, and of service in it, must come before we shall be exempt from such shocks to our complacency and our pride as the Washington disclosures have given us. Like the scandals of Grant's second term, they follow hard upon the lavish methods of war time, and show us once more just in what way war tends to impoverish the moral fibre. Resultant civic demoralization is one of the historic consequences of war. To the need of cutting out this particular gangrene, the authorities show signs of being at last aroused. Even the lackadaisical Postmaster-General finally admits that he has "a sad business" on his hands, and that "the end is not yet." Fortunately, the case has been put into the hands of that Assistant Postmaster-General Mr. Bristow, who has long been a terror to evil-doers. He recalls the Bristow who earned the enmity of the whiskey-ring in the seventies by his relentless and sleepless prosecutions. It is this skilled investigator who has now turned Mr. Payne's jocose "hot air" into indictments for crime. More power to his elbow! But we think, also, it is time that a vigorous word were heard from President Roosevelt. Can he not stiffen Payne as he turned down Hanna?

OUR ARBITRATION WITH VENEZUELA.

Venezuela's difficulties with her European creditors became so prominent last winter that the grievances of citizens of this country almost dropped out of sight. Yet one noteworthy result of the complications was the signing of the protocol providing for the arbitration of outstanding American claims against Venezuela. The commission appointed to meet on June 1 at Caracas for the adjudication of these claims will attempt to straighten out differences that, in many instances, are of half a century's duration.

The first commission to consider our Venezuela claims, in 1867, came to be an international scandal. It passed upon forty-nine cases, twenty-four of which, aggregating $1,250,000 in amount, were decided favorably to the American creditors. Only 15 per cent. of these awards were ever paid, the Venezuelan Government calling a sudden halt upon the alleged discovery that they had all been fraudulently obtained. This serious charge naturally created a great sensation. The gist of the accusation was that the several commissioners and the umpire—whose appointment, it was alleged, was not above board—had entered into a conspiracy to defraud the Venezuelan Government in the interest of certain preferred creditors. Their profit on the transaction, it was asserted, was from 40 to 60 per cent. of the awards. Inasmuch as Congress, in a joint resolution approved by President Arthur in March, 1883, declared that the charges were "not without foundation," and recommended the appointment of a new commission, it may be assumed that the evidence was pretty conclusive.

The diplomatic tangle dragged its slow length along until a new convention was signed in 1885 for the readjudication of the claims. Ratifications, however, were not exchanged until 1889. The charge that the first commission was corrupt was borne out, to some extent, by the judgments of the new one. It met at Washington in 1890, and, of the twenty-four claims allowed by its predecessor in 1867, decided that only nine were valid. Thus closed a diplomatic episode which was extremely humiliating to both governments, and which, for nearly a quarter of a century, was a menace to the relations of two friendly nations, as well as to the cause of international arbitration.

This review explains, in part, the necessity for the commission now in session at Caracas. The only province of the tribunal of 1890 was to pass anew upon the claims presented in 1867; it had no jurisdiction over the large number which had accumulated since that date. There were also several antedating 1867 which, for one reason or another, had not come before the commission of that year; and others have been piling up since 1890. The latest arbitral tribunal is sweeping in its jurisdiction. It is empowered to pass upon practically all the unadjudicated claims of American citizens against Venezuela. Moreover, a number of the cases brought before the commissions of 1867 and 1890 will be introduced again on the strength of new evidence. The unearthing of these old debts will involve the history of conditions in the republic of Venezuela since its foundation in 1811, and of our checkered relations with it.

The claims are of two classes—those which arise from contractual obligations existing between the Venezuelan republic and citizens of the United States, and the damages sued for as the result of injuries inflicted by Venezuelan agents upon Americans. Both classes are the direct outcome of the remarkable political conditions, the unstable and irresponsible governments, and the almost incessant revolutions, which have marked the annals of Venezuela. Many of the contractual obligations, for example, are represented by bonds issued to American citizens, frequently in payment for sums advanced in support of revolutionary movements. A wealthy American, that is to say, would become the financial backer of a Presidential aspirant. In the event of success, the grateful patriot would reimburse his supporter in the shape of a bond issue. Before many interest payments had been made, and almost invariably before the principal became due, another revolution (also, perhaps, with its foreign financial backer) would have driven the first President into exile. Under those circumstances, it was difficult to convince the latest incumbent that he had any obligation in connection with that particular debt. The argument made in favor of such bonds is that they have been issued by a de-facto and, in some cases, by a de-jure Government, and are

as legal as hundreds of other acts which bound successive governments. The other claims are usually for damages caused American citizens in the suppression of insurrections. The Venezuelan habit of appropriating the property of foreigners during these crises is notorious; but, up to the present moment, the Venezuelan republic has been reluctant to acknowledge financial responsibility for acts of this kind.

It is thus apparent that many old causes of friction between the two governments are likely to be removed by the coming arbitration, as well as lasting precedents established. The present commission will have two great advantages over any previous one. In the first place, the payment of the awards is assured. Thirty per cent. of the customs receipts of La Guayra and Puerto Cabello are now being collected for the satisfaction of foreign debts. If the Venezuelans do not hand this over themselves, the protocols signed with foreign Powers provide for the installation of Belgian customs agents. Again, the protocol with the United States is unusually liberal in its terms. It provides that the awards shall be made simply with regard to the absolute justice of the claims; that plain common sense, rather than legal technicalities, shall be the basis of the decisions. This provision, together with the personnel of the commission, should assure a fair adjudication of all matters in dispute. The State Department has appointed Mr. William E. Bainbridge as its representative on the commission; Venezuela has named Dr. José Paúl, while the Queen of the Netherlands has selected as umpire Mr. Charles Augustinus Henri Barge, ex-Governor of Curaçoa.

THE ANTIDOTE FOR CHAMBERLAIN.

Mr. Asquith, a man who weighs his words, declared in a speech on May 21 that the present English Government offers a spectacle absolutely unprecedented. The difficulty was to find the points upon which its ostensible supporters and its responsible Ministers agreed. It was not simply a question of there being a "cave" in the Government; the Government was "honeycombed by caves." In the Commons, you would run at every corner upon "some little knot of Ministerial supporters going to or returning from its own particular lair." The whole thing resembled a political pantomime. At any rate, Mr. Asquith concluded, "it would not be very long before the bell would ring for the transformation scene."

Well, the transformation scene was produced on Thursday. The Prime Minister gracefully ate his own words of less than two weeks before. On May 15 he told a delegation of protesting Unionists that the corn tax could not be made a "permanent part of our fiscal system," and that a "fiscal union" with the English colonies was not possible. On May 28 he was willing to leave them both open questions, along with the whole tried policy of English taxation and trade. When his subordinate, Mr. Chamberlain, affirmed that the next election would turn on the issue of preferential tariffs, with customs duties on food and raw materials, Mr. Balfour said that, though he did not agree as to the food tax, still, the Colonial Secretary's bold proposals were consistent with "the liberty of a Minister," and that the Cabinet was not, as cruelly charged, rent with dissensions.

Looking first at the political consequences of the muddle, we can only conclude that it must be fatally damaging to Mr. Balfour. He has never been expert in matters of trade or finance. His being enamored of bimetallism was looked upon as the amiable weakness of a metaphysician wandering about in a world not realized. That has been forgiven him—possibly because he had to suffer so much ridicule for it. But a great trading nation cannot long put up with a Prime Minister who does not know his own mind in the things of commerce and taxation. It is one thing to have a flexible intellect and a keen dialectic, as Mr. Balfour undoubtedly has; but it is another to be always doubtful of your ground, to be forever hunting with the hounds and running with the hare. Mr. Balfour's mind is so hospitable that he can harbor contradictory ideas. He is too much open to the reproach which Disraeli addressed to Sir Robert Peel—namely, the peculiarity, "which is perhaps natural with men of great talents who have not the creative faculty," of having "a dangerous sympathy with the creations of others." In this case, it is the masterful and initiating Chamberlain who has come forward with his creation, and the Prime Minister placidly takes it over, despite his former protests that he never would. Only one result can follow, politically. Mr. Balfour's prestige is snuffed out. His Government may not go to pieces, but he has shown himself a reed shaken in the wind. The leadership of his party must soon pass to other hands.

That they will be Mr. Chamberlain's is now the common expectation. He has again put forth an "unauthorized programme," as he did under Mr. Gladstone. But Balfour is not Gladstone. That imperious chief gave Mr. Chamberlain to know his proper station. Now the case is far different. Mr. Balfour does not fight; he simply makes subtle distinctions and weds opposites. The constituencies and his party have shown their dissatisfaction with him. The country craves a stronger man, and the Colonial Secretary has offered himself. He has positive convictions, a bold initiative, popular qualities, and an instinct for showy phrases about taking subjects. Whether the Conservatives really like him or not, they may easily be forced to accept him. Certainly the political fates seem clearly to augur that he must increase while Balfour must decrease.

As regards his specific programme, the first thing to be remarked is that it is not at all specific. He is going to bind the Empire together by means of preferential tariffs. He proposes to prevent England from being made a "dumping-ground" for foreign manufactures. We thought that the United States had reserved all rights as the only dumping-ground, but Chamberlain has taken the thing away from us, it seems. He is also going in for a policy of tariff retaliation against Germany, and this country, too, apparently. But when you press him for a plan he refuses to produce one. A wicked and adulterous generation seeketh a plan, but no plan shall be given them—not, at least, until after the country has sent Chamberlain to the Commons with a majority at his back. But this only increases the confusion of the political situation. Here is a strong Conservative Government already in power, but its Chancellor of the Exchequer is repealing the one tax—that on grain—which may be called protective, and which furnishes a basis for preferential trade with the colonies. What is the sense of that if you are presently going to ask the country to authorize a whole series of such taxes?

The financial and fiscal bearings of Mr. Chamberlain's grandiose but vague schemes will be much discussed. We can barely mention them now. In general, the argument against them is, first, that they are inconsistent with each other. He proposes, seemingly, to protect English manufacturers, yet would do it by making their cost of production higher by means of taxes on raw materials and on food. In the second place, statistics show that England's stake in the trade with foreign nations is about three times what it is in colonial trade. In 1902 she imported from foreign countries goods to the value of $2,105,000,000; from the colonies, only $530,000,000. The exports were, respectively, $870,000,000 and $545,000,000. What shall it profit England to increase her colonial trade if she hazards the other?

That the United States has a vital interest in Mr. Chamberlain's tariff proposals is obvious. A Congressman from Minnesota speaks of them as "a cloud on our commercial horizon." He points out, what must occur at once to every one who duly weighs the fact that the United Kingdom is by far the best customer this country has, that a discriminating duty laid in England upon our foodstuffs and the raw materials of manufacture might cripple our trade disastrously. Take a few figures. We sold to Great Britain in 1902, free of duty except for the small and temporary grain tax,

$4,220,000 worth of corn, $24,000,000 of live animals, $35,713,000 of flour, $50,000,000 of wheat, $80,000,000 of provisions, and $117,000,000 of cotton. This is a tremendous trade—upwards of $300,000,000 annually—and it is plain that a blow to it would be a shock to our national prosperity. That this has depended in large part upon our great crops, with ability to dispose of our surplus abroad, is questioned by no one. Nor is it a case for us to settle down in a fool's paradise and say that we shall go on "feeding the little islands right along," come what will. We do not consider the adoption of Mr. Chamberlain's plans probable; but they are not wholly impossible.

We will not affirm that Mr. Chamberlain is deliberately hostile to the trade of this country. What he primarily thinks of is, no doubt, the immense enlargement of an all-British trade. But the means he would employ cannot but be prejudicial to our commerce. It behooves us, therefore, to look about betimes, and take steps to ward off this possible danger. Canadian reciprocity is, in our judgment, the one road of safety and profit now open to us. By quickly closing with the willing statesmen of the Dominion a broad treaty for reciprocal trade, we not only could do a good stroke of business for the people on both sides the border, but should be able to bring the whole idea of intercolonial preferential tariffs to the ground. The reason is that we can offer Canada more than England can. We need the products of Canadian fields and forests and mines; Canada is a great natural market for our manufactures. Nature decrees close relations between the two peoples, and nature is still more powerful than Imperialism. Canadian lumber, and wood pulp, and barley, and coal are now prime necessities to us. We have manufactured products which flow into Canada in spite of her existing tariff in favor of British products. A reciprocity treaty, conceived on generous lines, in accordance with the expressed desires of New England and of the Chambers of Commerce in border cities like Cleveland and Detroit, as well as with the often manifested wishes of the statesmen in power at Ottawa, would not only bring added prosperity to both countries, as the treaty of 1856 confessedly did, but would definitely take Canada out of Mr. Chamberlain's great plan. But, with Canada out, that plan would die instanter.

NEW ROME.

ROME, April, 1903.

The vicissitudes of Rome have passed into a proverb, for no Western city so well illustrates by its history the instability of human affairs. These vicissitudes have not ended. Indeed, there has seldom been an epoch in the two thousand six hundred years during which Rome claims to have lived, which has seen larger and swifter changes in the external aspect, as well as in the social and political life of the city, than those which strike the visitor who compares what he beholds now with that which he beheld twenty or thirty or forty years ago. So far as externals go, the last fifteen years have brought about greater alterations than even the preceding fifteen, though it was in that earlier period that the rule of the Pope ended and the reign of the House of Savoy in Rome began. Swift as has been the growth of the great manufacturing towns in Germany, England, and America, the changes in Rome have been not less striking, though the scale may be less large. They are threefold changes. New quarters have been added. The older parts of the modern city, the parts which date, broadly speaking, from the fifteenth, sixteenth, and seventeenth centuries, have been transformed. And the oldest parts of all, those which belong to the republican and earlier imperial ages of the ancient city, have been so largely, if still imperfectly, explored and laid bare by excavations that their aspect is very different from that which the antiquarian studied in the middle of the last century, and wholly different from that which Turner sketched and which inspired the verses of Byron.

These three sets of changes deserve to be considered separately. Taking the additions first, it is hardly too much to say that, since 1870, the area covered by houses has been increased by one-fourth. The space covered by those beautiful Ludovisi Gardens which were so delightful a feature in all general prospects over the city, is now filled by new, wide streets, lined by tall, handsome, and perfectly dull houses. Other streets, also with tall but somewhat less pretentious houses, have arisen on the gardens and fields which lay on the Esquiline and Cælian Hills between Sta. Maria Maggiore and St. John Lateran. A still larger mass of houses—partly detached or semi-detached villa-like residences, partly high blocks of tenement dwellings inhabited by the poorer classes—has sprung up in the region called the Meadows of the Castle (Prati di Castello) to the north of the Castle of St. Angelo and to the northeast of the Vatican. Here the speculative builder has made supply outrun demand, and many of these houses stand tenantless, a dismal sight. Nor is this all. At the opposite side of the city, thickly set houses line the streets which run out into the Campagna from the Porta Pia and the Porta San Lorenzo, so that considerable suburbs now cover what had been a perfectly lonely and silent region from the days of the Emperor Constantine to those of Pope Leo the Thirteenth. Building still goes on in these districts outside the wall of Honorius, and no one can say how far Rome may push herself into the country towards Tivoli.

So much for additions. Within the old town, the cutting of new, broad streets has completely altered the appearance of some of the most densely peopled parts. Nearly the whole of the famous Ghetto, that Jewish quarter which was the most compressed and intricate tangle of lanes in the mediæval city, has been demolished. A broad and stately street leads from the Capitol end of the Corso to the railway station at the top of the Quirinal hill; and the huge marble monument to King Victor Emanuel, which is being erected on the slope of the Capitol, begins to overtop the neighboring edifices, and will, when it has been completed, form a prominent and inharmonious object in the general view. Three new bridges have been thrown across the Tiber, and the Tiber itself is now buried for great part of its course by a new embankment, which rises high above the channel and has caused the destruction of many of the old houses which abutted on the margin. Much has been gained for health. Inundations need hardly be feared in the future. Malaria has practically disappeared; typhoidal fevers are less frequent; the death-rate has been so much reduced that Rome now ranks among the most healthy of European capitals. But this gain has been accompanied by a notable loss of picturesque beauty. The suburbs spreading out beyond the walls increase the bulk of the town, and, by adding featureless districts, lessen the distinctive character which the domes, and towers, and masses of ancient ruin gave to the smaller area in all those panoramic views from the tower of the Capitol, from St. Peter Montorio, from the top of Monte Mario, from the ball of St. Peter's itself, which were, thirty years ago, one of the chief joys and most durable recollections of a visit to Rome. The new thoroughfares, and, still more, the new quarters on the Cælian Hill and the Castle Meadows, are, like all the new quarters of European cities, absolutely monotonous and uninteresting. One is apt to think that it is age and decay that make buildings picturesque; but one cannot believe that after five hundred years these recently erected streets will be any less dull and tame than they are to-day. Here and there in Europe one finds single fine buildings, stately and dignified, if marked by little originality, erected within the last forty years. But the art of street construction, considered as a distinct branch of architecture, seems to have died out alike in Italy and in Germany, in France and in England. The most ardent worshipper of beauty must, however, admit that the dwellers in Rome cannot be expected to sacrifice health and comfort to the romance of tradition and the charm of decay.

Lastly, Rome, as we see it now, has become a new Rome by the uncovering of the oldest monuments of the classical city. The discoveries made within the last twenty-five, and especially within the last ten, years, have of course affected only a small area. Four-fifths of them have been made in the Forum, inside an area which one might roughly estimate at thirty to forty thousand square yards. But this is by far the most interesting part of the city, since it is that which is most closely related to the history of the Republic and of the earlier Empire; and it is the part where the masses of ruin, planted close together, most powerfully affected the imagination of those who saw ancient Rome in her greatness and her decline. Here and there in other districts discoveries have been lately made, such as that of the old Church of St. Sabas on the Aventine, under and in the middle of the more recent church of the ninth century, or such as that of the police barrack of the *Vigiles* in the Trastevere region, some twenty feet below the level of the present ground surface. Still, the excavations in the Forum Romanum

transcend all others, and have given us for the first time a fairly complete and exact knowledge of the various historic sites within its crowded area. The Basilica Aemilia has been entirely laid bare. The Temple of Julius Cæsar, with the very altar on which his body was burned; the fountain of Juturna, the temple of Vesta, the Regia, the Black Stone with the mysterious *cippus* or small stone pillar, bearing an inscription in letters, half Latin, half Greek, which have not yet been deciphered, and which must go back to a very remote age, have all been located and examined. A group of prehistoric sepulchres, possibly older than the traditional foundation of Rome herself, and considerably beneath the level of the Forum of Cæsar's day, has been discovered. Signor Boni, in whose hands the direction of these latest diggings has lain, has shown great skill in conducting them so as to do the least possible damage to the remains uncovered, and has shown no less taste in putting in such structural supports as were needed, and in planting flowers and shrublets where there was space for them. Another almost equally interesting excavation has revealed, at the edge of the Forum, under the stupendous pile of the buttresses of the early imperial buildings on the Palatine Hill, a large Christian church of the seventh and eighth centuries, S. Maria Antiqua, whose walls are covered with remarkable fresco paintings. These discoveries have given a veritably new old Rome to the scholar and the archæologist.

Much more remains to be done. Excavation ought to be pushed further back on the side of the Forum opposite to the Palatine, where the existence of houses still in private hands has checked the work. The Palatine itself has been less than half explored, and, though it will yield no historic spots comparable to those of the Forum, there may be priceless fragments of sculpture buried within the masses of ruin. The same is true of parts of the Cælian and Esquiline Hills. It is the want of funds that checks the progress of the work. Italy, though her financial position has sensibly improved, is not able to spend much money on what is, after all, a luxury. Under these circumstances, it may cause surprise that men of wealth and taste in other countries, and especially Americans, do not come forward to help in a work of such immense importance and interest. The Italians are a little sensitive as to receiving the aid of foreigners, yet these susceptibilities might easily be allayed. No object outside their own country ought more to appeal to Americans, for Roman archæology belongs to the whole world, and Americans have in the American School at Rome an institution of which the colleges that support it may be justly proud, and in the head of that school an accomplished and judicious scholar, whose advice as to the wise employment of funds in archæological research would inspire the fullest confidence. When one considers what light is being thrown upon primæval history by explorations such as those of Mr. Arthur Evans in Crete and Mr. W. M. Ramsay in Asia Minor, as well as by the recent explorations in Rome, it seems extraordinary that, in an age when rich men find it hard to know how to spend their wealth, it should be found so difficult to obtain funds to prosecute researches of incomparable historical significance.

THE ROYAL ACADEMY.

LONDON, May, 1903.

I cannot remember one of the Academy's shows that has contained so few fine or interesting exceptions to the general rule of mediocrity as the present. One reason, perhaps, is that Mr. Sargent seems to have put a new restraint upon himself. For several seasons past, the Academy has been relying upon him too implicitly to provide something in the way of a sensation. His huge portrait groups, with their air of inexhaustible physical energy and industry, were overwhelming in the midst of timid, furtive, anæmic little Academical performances. But this year he has no large portrait group. He sends nothing that in size or scale can catch the public's eye; and, what is more serious, nothing that in ambition or achievement can appeal to artists with the force of so much of his work in the past. His portraits are six in number, and I need not add that they are distinguished by the technical ability which is taken as a matter of course in Paris, and in London always seems so startling, such a rare gift. But I cannot help thinking that Mr. Sargent nowadays is in too much haste to meet the rush of commissions to exercise his old power of observation—or instinct, it may be, one should call it in his case. I feel this more particularly in the four portraits of women. There was a time when the faces of his women were almost indiscreet in their revelation of character; now they begin to be too non-committal to interest one. Race alone, it might have been thought, would have differentiated the type more strongly in his "Mrs. Joseph Chamberlain," "Lady Evelyn Cavendish," and "Mrs. Julius Wernher." The portrait of Mrs. Chamberlain is especially disappointing. It is a half-length. She stands, looking out from the canvas, in a delightfully painted gown of white and blue; but this gown, with its folds and shadows, its sheen and shimmer, and the chance it gives for long expressive sweeps of the brush, has apparently engrossed Mr. Sargent. The head is insignificant. The face wears the conventional smile that too many of his women of late have shared. Nor can he keep his palette clear of the unpleasant green that gets into his flesh tints, into his draperies, even into the detail which in several of the portraits he introduces into the background. And it is the same with the "Lady Evelyn Cavendish," and still more so with the "Mrs. Julius Wernher." He has evidently enjoyed the ease and rapidity with which he put in the costume—texture, color, mode, all admirably suggested—but he has been too hurried to linger over the face and give it its essential and more subtle, and therefore more difficult, character with equal vigor and expressiveness.

He has succeeded no better with his two portraits of men, though Lord Cromer, surely, should have offered him every opportunity. The large, portly, middle-aged, gray-haired man, in his correct suit of gray, who sits in his study at ease, with his legs crossed, is the typical "English country gentleman," not the statesman. There is prosperity in every substantial line and curve of the figure; the ruddy complexion speaks of a healthy life in the open air. But of the man born to command, there is not a trace—not a trace of the dignity, even the swagger, of which every old portrait painter of the least note had the secret. The likeness, no doubt, is admirable, but it is admirable photographically. It is as if Mr. Sargent had taken a snapshot with his brush at Lord Cromer in passing, without stopping to bother about pose, or design, or pictorial unity, or any other such trifle. And so, also, the painter has caught Mr. McCorquodale, in the other portrait, at the moment of leaving the room, hand even on the knob of the door; has focussed his attention upon the face, burnt by the sun to a brilliant red, and left the rest of the picture to take care of itself.

To say this is to explain that Mr. Sargent's pictures this year are not of great distinction. It must also be said, in justice to him, that they are, technically, abler and more skilful than any others in the Academy. But the trouble is that an artist upon whom Mr. Sargent has, to a great extent modelled his style, who actually succeeds where Mr. Sargent is still striving, is this spring exhibiting at the New Gallery a portrait that sets quite a different standard from the Academy's. This artist is M. Boldini, and the portrait, the wonderful "Whistler," his masterpiece. I described it when it was shown in Paris in 1900; it has been seen in New York. There is no need, therefore, to describe again one of the most amazing studies of character that any modern artist has produced. I do not mean, when I say this, that it is a portrait to be ranked with the masterpieces of Hals and Rembrandt, of Velasquez and Mr. Whistler himself. But what I do assert is that, as a study of character, it is astounding, and that, moreover, it is infinitely better than any thing shown in any gallery in London this year. It is true that Mr. Lavery and Mr. Henry both have portraits at the New Gallery, in which there is the charm of pictorial unity disdained by Mr. Sargent. True, that at the Academy Mr. Furse is unusually ambitious and accomplished in two large portraits—one of an officer standing by his horse, the other of a lady in voluminous rose-colored draperies also standing by a horse upon which the rider still sits astride, and both set against a wide romantic landscape—attempts in the "grand manner" of the eighteenth century, brought back into fashion by Mr. Sargent. True, that Mr. Greiffenhagen has a small portrait of a man (just the head and shoulders), so well designed, so harmonious in its low-toned color scheme, keeping its place so well within the frame, that, modest as it is, and obscure as is the corner found for it by the hanging committee, it strikes one as the most complete, the most perfectly rounded-out picture in the Academy. But all these things are overshadowed by the Boldini, which, in its intense vitality, its observation, its truth, its brilliant technique, simply dominates everything in London this spring.

Mr. Abbey has failed the Academy almost as signally as Mr. Sargent. It is he who, of late, has supplied the large historical composition—"the subject picture"—without which at one time no Academy would have been thought possible. But instead of the pictorial record of the Coronation that was expected of him, and that he is painting by royal command, he sends only a small canvas called "Pot-Pourri": a cool, white room, low and vaulted, with old portraits on the walls, and a group of

women in various poses preparing the heaps of rose leaves, which give a touch of vivid color. It is the sort of thing Mr. Abbey can do best. The figures are graceful, the quality of the white wall, cool in the shadow, warm in the sunlight, is carefully studied and well rendered. But the composition is weak, the effect is scattered. Mr. Abbey should have a look at the beautiful Ver Meer, now in the Guildhall show, for a reminder that there are certain "unities" to be respected as absolutely in a picture as in a play.

The usual Academical exercises abound: the familiar arrangement of blue sea, white marble, and women in classic draperies by Sir Laurence Alma Tadema; the studied nymphs in studied landscapes by Mr. Waterhouse, decorative in intention, labored in effect; the refined, delicately painted interior by Mr. Orchardson, this time Reynolds's studio, the interest unfortunately concentrated on Mrs. Siddons, who stands in the foreground, her awkward arms outstretched (the only ugly lines in the composition), her white draperies breaking in cruelly upon the quiet color scheme. And so I might go on through the list, ending with the inevitable sentimental young lady of Mr. Marcus Stone, and the handkerchief-box beauties of Mr. Frank Dicksee. But there is really nothing of note.

The landscapes are scarcely better. One by Mr. Bertram Priestman at the New Gallery, a peaceful pastoral bathed in golden summer light, is full of the repose that is the charm of the work of the French Romanticists, of whom Mr. Priestman is a direct descendant. But at the Academy Mr. Clausen and Mr. Stott, to whom one always looks for whatever pleasure one finds in that big hodge-podge of poor work, are curiously uninteresting. A large picture of the Château Gaillard, by Mr. Alfred East, is composed with something of dignity and stateliness; but then so fine a subject composes itself, and a painter would have to go out of his way to spoil it. Indeed, I can find nothing more, if I except a little painting of the mountains in the Tyrol in autumn by Mr. Adrian Stokes—a few trees of pale gold in relief against the deep blue of the distant hills, with so little light and atmosphere that the picture seems merely a decorative pattern, a pretty mosaic of color.

But this landscape and a larger one by Mr. David Murray are the most talked-about pictures of the year. For a good reason, they have just been purchased by the Chantrey Trustees, and are destined to be hung in the Chantrey collection at the Tate Gallery. As a rule, the purchase of pictures by the Chantrey Trustees causes but little comment. Artists shrug their shoulders, and think it a pity that the president, treasurer, and council of the Royal Academy, to whom the selection is entrusted, should have such poor taste in these matters as to prefer the work of the members of their own Academy and their friends, and thus saddle the nation with a collection of modern pictures that could do honor to no gallery. That there is any remedy for the evil never occurs to most of the few people who give the Chantrey collection a thought. Judging by the selection of pictures, they naturally conclude that Chantrey left his money partly as a sort of benevolent fund, at the disposal of the Academy for the benefit of Academicians and the encouragement of young men and women of promise. They would also conclude from the methods of the trustees, that only the work of British artists was eligible, and, moreover, their work only when exhibited at the Academy in the year of its completion. It is true that every now and then a public protest has been made, and it has been pointed out that the trustees, though no doubt unintentionally, were hardly administering the fund as the terms of Chantrey's will show, that Chantrey wished it to be administered. But the Academicians "sat tight," a safe policy in England, and the storm has always blown over. This year, however, there has been a return to the charge at the most timely of moments.

Just a week or so before the Academy opened, Mr. D. S. MacColl, the distinguished art critic, published in the *Saturday Review* a serious, strong, but temperate article, simply stating the terms of Chantrey's will, and then calling attention to the manner in which the trustees have carried them out. Chantrey, who died in 1841, left a large fortune, the income, after certain legacies were arranged for—between two and three thousand pounds a year—to go to his wife during her lifetime, or until her second marriage in case she married again, and after that to be devoted to the "encouragement of British fine art in painting and sculpture only." This "encouragement" was to take the practical form of purchase of examples of the two arts mentioned, these works to be placed in some public gallery. The testator made the special condition that they were to be of "the highest merit," whether already executed or to be executed, by artists of any nation, provided these artists had resided in Great Britain during the execution and completion of such works. They might be by deceased artists, and he made no time limit. But he again repeated that the painting and sculpture must be of "the highest merit" that can be obtained for liberal prices, and the president and the council, though the selection is in a measure left to their discretion, must have "regard solely to the intrinsic merits of the works in question, and not permit any feeling of sympathy for an artist or his family, by reason of his or their circumstances or otherwise, to influence them." In a word, what Chantrey wanted was clearly as fine a collection of pictures and statues, of necessity chiefly modern, as could be obtained in Great Britain.

And now, what is the Chantrey collection? Mostly British, as any one who has been to the Tate Gallery knows; and, more than this, mostly British of the most Academic type. Indeed, the collection is practically a permanent Royal Academy. In the large majority of cases preference has been given to members of the Royal Academy, to those who are about to become members (so that purchase by the Chantrey trustees usually is accepted as a prelude to election to the Academy), and to exhibitors in the Academy. The purchases did not begin until 1877, after the death of Chantrey's widow; and the first year, a picture by a "deceased artist"—a now forgotten artist—Hilton by name, was bought. This, if I am not mistaken, is the one exception. But even of those living artists who come within the conditions of the will, the collection can by no stretch of imagination be thought to include examples of "the highest merit." Ford Madox Brown and the pre-Raphaelites, Rossetti, Millais, and Holman Hunt, were all living after 1877, but, though their work has such historical as well as artistic importance in the history of painting in Great Britain, Millais alone is represented, and that only by a late picture which intelligent critics must agree is not worthy of him. Fred Walker, Mason, and Pinwell, who were so essentially British in their art, and who were painters of some distinction, though not masters, have no place. Neither has Burne-Jones. Alfred Stevens has received no recognition, nor has Mr. Alfred Gilbert, much the most distinguished sculptor to-day in England. Whistler, Fantin-Latour, Legros, Matthys Maris, Degas, Dalou, even Claude Monet, satisfy Chantrey's conditions, but in the Chantrey collection you will look for them in vain. And when it comes to British painters now at work, I simply have not space to point out all the artists who have been passed over in favor of second-rate Academicians and exhibitors in the Academy.

Worse still is the price that is paid, though on the Continent, especially in France, the artist accepts the honor of a place in a national collection as a part, and a very important part, of the payment. There are instances of the pictures of Academicians being bought for one thousand or two thousand pounds, when equally large and still better canvases by the same men have gone for a few hundreds to private buyers or in the auction room—in one case for even less than two hundred pounds. Facts and figures are unanswerable arguments, and Mr. MacColl's article, appearing just when it did, naturally has made some little stir in the art world. The president and treasurer and council of the Royal Academy alone have remained unconcerned. They proceeded promptly to buy two not very good examples of two not particularly distinguished painters who are both already represented in the Chantrey collection—though Mr. Whistler and Mr. Alfred Gilbert have not yet been found worthy; they also bought sculpture by an Academician who I venture to say is not known even by name in America, and a recently elected Associate who, like the two painters, has already been honored by the trustees. It is generally felt that such a selection, following close upon Mr. MacColl's article, is something in the nature of a defiance to the artistic opinion of the country outside the Academy. The matter is being taken up in different quarters. The London papers are occupying themselves with it. The Academicians, up to the present moment of writing, are still "sitting tight." But it is no wonder that a great deal more interest has been excited in the administration of the Chantrey bequest than in the most mediocre Academy held for many years. N. N.

Correspondence.

UNIONISM AND MOB RULE.

To the Editor of The Nation:

Sir: I have been greatly interested lately in the revolt and searchings of heart of certain skilled workmen of my acquaint-

ance against and about unionism. This Terror, born of prosperity, is just beginning to make itself felt as a power in this little town. The men of whom I speak, intelligent, well read, past masters in their several handicrafts, have been earning a generous living and raising themselves steadily by their superior industry and capacity. In the hardest of times they were engaged weeks ahead and felt their future a safe and bright one; but now, when golden harvests show on every side, the ground is being cut from under their feet. Pressure is being put upon them to join the union—pressure so insidious and all-pervading that, while struggling, they feel that they must ultimately yield, and then good-by to their independence, their hopes of the future. The unions here, as so frequently occurs, are managed by windbags, incapable of doing an honest day's work, but clever at throwing the dust of many flattering words into the eyes of the masses; the serious workmen being too busy by day to waste their energies in club meetings and talk by night. And these sturdy, capable men, who have made it the pride of their life to be able to do the work of two ordinary workmen, will be at the beck and call of men they scorn, only allowed to work when and where the others please, with their earnings cut short and their output limited at the caprice of the least skilful of their fellow-slaves.

The problem of the unions and the problem of our city governments present the same general features. We must either elevate the masses or be dragged down by them. The city governments are controlled in the last resort by a majority of citizens blankly ignorant of all principles of economics and the accumulated experiences of other cities and States, who are led by the most specious demagogue that tries to cajole them out of their votes by promises impossible of fulfilment; and of the really debased, who sell their votes as a matter of course to the highest bidder. The unions are controlled by a majority composed of the ignorant and misled workmen as above, and by the incapable and worthless workman, who hopes, by the simple process of interdicting his able associates, to get pay for work which he cannot or will not do properly.

The leaven which is to leaven the whole lump cannot be expected to do its work unless it be intimately mingled with it, and by its normal reaction work up the whole mass into a useful and valuable product. It is by sacrifice that the world moves forward. The worker in a settlement in the slums, with all his senses outraged and at times half-broken-hearted over the seemingly hopeless task, in a few years sees the air clearing about him, and sunlight and hope filtering in. The skilled workman, bullied and insulted by a worthless loafer who calls himself a walking delegate, will yet, if he patiently teaches better things both in workmanship and in moral standards, be able to chisel out of the present societies of men who have renounced their birthright of freedom and self-respect and the pursuit of happiness, a union that will serve its members instead of enslaving them, and help them to higher standards of efficiency and public service, which is in simple truth the workingman's service.

M. C.

Santa Barbara, Cal., May, 1903.

THE DESTRUCTION OF THE TAKU FORTS.

To the Editor of The Nation:

Sir: The point raised by Dr. Griffis in his note in your issue of the 28th of May is interesting and important. It does seem strange that Admiral Kempff's refusal to join the allies in the attack upon the forts at Taku June 17, 1900, should not have elicited any word of official approval from the United States, especially since the opinion has been so prevalent that his act secured for us special favor in conducting negotiations with China. An explanation which would seem to be probable may be found in the theory that, upon more fully viewing the circumstances, the United States Government had occasion to regret his act.

As my experiences at that time gave me some original information in the matter, allow me briefly to relate some of them. I had returned to Peking, on the 25th of May, from an extended trip into the interior, where I had seen many indications of the activity of the Boxers. That afternoon there was a large meeting of the Oriental Society in Peking, at which many of the most influential diplomats were present to discuss the situation. Not one of them had any serious fears of impending calamity. On the 26th of May I left Peking for Tientsin on what proved to be the last train out of the city. On the 27th the revolution broke out; on the 28th the railroad was destroyed and communication with Peking was cut off. There were no foreign soldiers in Tientsin except twenty-five English guards. On the 29th, Minister Conger telegraphed for a guard of marines, but the Chinese Governor ordered that no foreign troops should be allowed to land. About midnight, however, 100 marines, who had evaded the forts, came up to Tientsin, where previously 50 Japanese soldiers had done the same. On the 30th of May we left Tientsin and found thirteen foreign men-of-war anchoring outside the bar of Taku, six of which were Russian. There we learned that the Russians had attempted to send two or three hundred soldiers to Tientsin, but had been turned back by the commandant of the fort.

The situation is readily understood. The allies distrusted either the ability or the willingness of the Chinese Government to suppress the Boxers and protect the members of the legations and other foreigners who were in Peking and Tientsin. If attention had been paid to the dilatoriness of Chinese diplomacy, it was clear to those who knew most about the situation that the delay caused would lead to a universal massacre. The assassination of Baron von Ketteler intensified this feeling. I think now there is no doubt in the minds of any well-informed person that hesitation at this point would have been fatal, and that there was really no other course to be pursued to save the lives of the foreign population but to capture the forts and proceed to the rescue. If that was equivalent to a declaration of war, it did not differ materially from the act of the United States in sending marines to Tientsin on the last of May by stealth. At any rate, the United States accepted the act of the allies in capturing the forts, with all its consequences, and joined without hesitation in the efforts to relieve the legations at Peking. Having done so, it is difficult to see how they officially could approve the mistaken judgment of their commander who had stood aloof from the attack. Nor do I believe that the action of Admiral Kempff has had influence in securing the good will of the Chinese Government for the United States. That, more likely, comes from the fact that we have had so little to do with China, and have not been implicated in aggressions upon her rights and territory, as European nations generally have been.

G. Frederick Wright.

Oberlin, O., May 29, 1903.

ARCHÆOLOGICAL INSTITUTE OF AMERICA.

To the Editor of The Nation:

Sir: The annual meeting of the Council of the Archæological Institute of America was held in New York in the board room of the Equitable Life Assurance Society on Saturday, May 9. About forty councillors and other members were present, representing the societies in Boston, New York, Philadelphia, Baltimore, Washington, Pittsburgh, Cleveland, Detroit, and Chicago, as well as the State societies of Connecticut and Missouri. The managing committees of the Schools in Rome and at Athens had met in the same room on the two preceding days. The day was devoted chiefly to the consideration of the reports of officers and of the chairmen of the managing committees of the schools in Athens, Rome, and Palestine. The reports of the President, Prof. John Williams White of Harvard University, and of the Secretary, Prof. Francis W. Kelsey of the University of Michigan, indicated satisfactory progress during the past year. The affiliated societies now number thirteen, and the membership of the Institute had reached the total of eleven hundred and sixty-three at the time of the meeting of the Council. The net increase in membership for the year was one hundred and eleven; half of this gain came from the formation of a new society at Pittsburgh, which has been established under exceptionally favorable auspices.

Requests were brought before the Council for authorization to organize affiliated societies in the Far West, and the Secretary was requested to make a tour as far as the Pacific Coast next winter in the interest of this work. A State Society will be organized immediately in Colorado, which will probably undertake, as one aspect of its activity, to assist in devising means for the preservation of the many relics of prehistoric life in that State; according to current reports, the cliff dwellings are being rapidly destroyed. The organization of affiliated societies in several Eastern cities is also under consideration. On account of the amount of work thus devolving upon the Secretary, the Council, on the recommendation of the Executive Committee, voted to establish the office of Associate Secretary, and invited Prof. Mitchell Carroll of the Columbian University to accept the new responsibility.

To judge from the reports of the chairmen of the managing committees, increasing usefulness and brighter financial prospects are the order of the day in the different schools. Professor West mentioned the substantial gift of $2,500 a year for four years to the current funds of the School in

Rome, from Mr. J. Pierpont Morgan; and stated that subscriptions to the permanent endowment fund now amount to $64,750. Prof. J. R. Wheeler, for the School at Athens, reported an increase of about $6,000 in its permanent endowment fund, besides subscriptions to an architectural fellowship. Funds are badly needed, however, to complete the excavations at Corinth. The work already done has won the praise of foreign scholars, and it will be a reproach to us if means are not forthcoming to carry the excavations to a successful close.

The report of the work of Mr. A. M. Tozzer, travelling Fellow of the Institute in American Archæology, was of special interest. He has mastered the Maya language in Yucatan, which he finds practically identical with the speech recorded by the early Spanish priests in the same region; and he is now trying to solve the vexed problems connected with the origin of the monuments in the Maya country.

After many years of valuable service, notable especially for the successful conduct of the excavations in Eretria and Corinth, Prof. Rufus B. Richardson retires from the directorship of the School at Athens, and Prof. Theodore Woolsey Heermance of Yale University succeeds him as director, on a five-year appointment. Prof. Richard Norton has been reëlected Director of the School in Rome, also for a period of five years. Prof. L. B. Paton of the Hartford Theological Seminary succeeds Professor Barton of Bryn Mawr College as annual director of the American School in Palestine.

Prof. John Williams White, who has served as President of the Institute for seven years with distinguished success, insisted upon retiring from the office, and Prof. Thomas Day Seymour of Yale University was elected President in his stead. President White's tenure of office has been characterized by high ideals, business-like methods, and a progressive policy. Under his administration the membership has been nearly quadrupled; the system of lectures before the Affiliated Societies has been inaugurated and developed to a high degree of effectiveness; the financial resources of the Institute have been enlarged, and its prestige much enhanced. The national character of the organization has been increasingly emphasized, and the foundations have been laid for even more extensive activities in the future.

Professor White is fortunate in his successor. Professor Seymour is also a veteran in the service, and his long experience as chairman of the managing committee of the School at Athens, from which he retired two years ago, will be of great value in the work of the Institute. C.

COEDUCATION IN SECONDARY SCHOOLS.

To the Editor of The Nation:

Sir: For the past few years there has hardly been a more thoughtful, condensed restatement of the problem of coeducation than that of "R. O." in the *Nation* of April 2. He views it from the standpoint of the college. It may be of interest, perhaps of value, to show how some of his more significant conclusions apply to secondary schools when the pupils are correspondingly four years younger than those he had in mind.

As in his case, it may in mine be worth while to state my opportunities for study of the matter. Up to my entry into college, I went to a country school with the boys and girls of the neighborhood, the sexes classed and instructed together, but seated on opposite sides of the room when possible. Outside of the walls, they naturally drifted apart, the boys engaging in the rougher games common to the open air and unlimited space. My collegiate and university training was in the institutions for men alone. For several years I have taught in a large coeducational high school in one of the important cities of this country. There are now some 700 pupils and 25 teachers, more than two-thirds of each being females.

In the following use of two of "R. O.'s" deductions I have drawn not only on my experience but on that of my colleagues, including in the second case all of the instructors, all of the years, and all of the subjects:

(1.) His positive conviction that the mixture of the sexes has no influence on the manners or morals, for better or for worse, of boys or girls, does not agree with observations here, so far as behavior in the room is concerned. All three conditions at one time obtained here—boys' classes, girls' classes, and mixed classes; the last largely predominating. As to discipline, the boys' classes were the worst, the girls' classes best, but none bad. Finally, all classes were mixed, with undoubted improvement among the boys' classes. I do not touch upon the grave apprehensions of some that the boys may be feminized under this process.

(2.) "R. O." is overwhelmingly endorsed as to finding the most capable student in nearly every class a boy. Only one teacher here, a woman, testified to such leaders being girls, and she had to modify her statement as to one room. Four others declared for girls in half or a majority of their classes, while the bulk of the teachers were as unhesitating in declaring for a boy in all (or mainly all) cases as "R. O." himself. This trend of opinion is the more remarkable when the disproportion of sex is considered. Besides, the reluctance of several of the women teachers to vote against their sisters was very evident.

As with "R. O.," several are on the fence about the wisdom of coeducation, with a tendency among some (men and women) as they get older to favor it less and less. It does seem worth discussion and inquiry whether that is a general inclination among coeducational teachers.

Several of the women teachers almost scornfully reject any intimation of sex in the intellect, a thing that "R. O." seems doubtful about. But isn't it irresistible logic that there must be sex in the intellectual, moral, and spiritual spheres? All these spring from and are inextricably interlaced with the physical. It is impossible to draw a line between them and their material foundation. If, then, there is such marked difference in the sexes physically, isn't it inevitable that there must be some difference in those higher forms of development?

"R. O." puts his trust for a proper solution of the problem in more data to be gathered in the next generation or so, but apparently the evolution of educational branches seems likely to expound the riddle before that time. Manual and technical training promises to open a broad path that substantially none will travel but boys. Side by side may be corresponding instruction for girls in the distinctive feminine occupations of housekeeping and ornamental callings. The two may be under the same roof, but that will be the only union between them. A manual school lately opened here has greatly cut down the attendance of boys at the coeducational culture high schools. There is a spontaneous preference on the part of many boys for a boys' school. This feeling, coupled with the aim of learning something practical, will largely explain the popularity of the new manual institutions. With ample educational provision for all the aspirations of both sexes, all doubt about coeducation will be removed in the most infallible way, by the unanswerable test of actual practice, with perfect freedom of choice among those most affected, the boys and the girls themselves.

"B. C."

May 29, 1903.

Notes.

One more revision of Bryan's 'Dictionary of Painters and Engravers,' with five hundred new biographies and with illustrations, is announced for September by Macmillan Co. This may well suffice for the next dozen years remaining of the century since the work first appeared (1816).

A quarto volume on 'Denmark, Norway, and Sweden,' by William E. Curtis, with numerous illustrations, is in the press of the Saalfield Publishing Co., who also promise Æsop's Fables in rhyme by Prof. Richardson D. White.

'Cheerful American,' short stories by Charles Battell Loomis, will shortly appear with Henry Holt & Co.'s imprint.

The ever busy class of librarians is taking on a new voluntary task—that of cooperation in a series of monographs planned by the Librarian of Congress, "forerunners to a general history of American libraries." The common scheme proposed for them may be found in the May issue of the *Library Journal*, together with the names of the several writers who will relate the history of libraries in New York, Pennsylvania, Ohio, etc., etc. The editor of the series is Mr. W. Dawson Johnston, who takes for his province Washington, D. C.

In the coming autumn, B. G. Teubner (Leipzig and Berlin) commences the publication of the first part of a new encyclopædia, 'Die Kultur der Gegenwart.' The editor, Professor Paul Hinneberg, has secured the services of collaborators like Adolf Harnack, Friedrich Paulsen, Julius Wellhausen, W. Windelband, William Wundt, Wilhelm Dilthey, Erich Schmidt, Ulrich von Willamowitz-Moellendorf, H. Oldenberg, Konrad Burdach, Hermann Paul, Karl Bücher, Gustav Schmoller, Adolf Wagner, Franz von Liszt, and others, each in his special field. The work will make four volumes, and will consist of two main divisions broadly representing mental and natural science. Its publication will be completed not later than the autumn of 1906.

The two latest volumes in the Dent-Macmillan edition of Thackeray's prose

are 'The Book of Snobs' and 'From Cornhill to Cairo,' both containing several minor pieces, and both edited as heretofore by Walter Jerrold and illustrated by C. E. Brock. In the latter collection are to be found the wonderfully inept Titmarshian description of the second funeral of Napoleon—a lost opportunity if there ever was one—and the review of Carlyle's 'French Revolution,' chiefly scissors work. These examples are more interesting as human documents than the title papers.

Parts IV. and V. of "Representative Art of Our Time" (The Studio Library, John Lane) call for little comment additional to that made on the first three parts. The best of the plates is an etching of Amboise, by D. Y. Cameron, in Part IV., and the next best another etching of the Bridge of St. Martin, Toledo, by Joseph Pennell, in Part V.

Lemcke & Buechner are the New York agents for "Hundert Meister der Gegenwart in Farbiger Wiedergabe" (Leipzig: E. A. Seemann), of which three parts have been sent us. Each part contains five rather gaudy color-reproductions of works by modern German painters, which we cannot find inspiring.

Five hundred and fifty years ago there was a worthy gentleman of France called the Chevalier de La Tour Landry. And this knight, having lost his wife, whom he loved greatly, for love of her would not marry again, but set all his heart upon his two daughters, to bring them up fairly and virtuously that they might be loved of God and honored of men. So to this end he made for them a book inculcating piety, courtesy, charity, humility, and fair behavior, and enforcing his teachings by many stories and ensamples of good and evil women, that by reading therein they might learn to be noble ladies according to the best ideal (and it would be hard to find a better) of the fourteenth century. This book, translated by Caxton into delightful fifteenth-century English, is given us in abridged form, by Miss (or Mrs.) Gertrude Burford Rawlings, with an editorial note and sufficient glossary. The paper, type, and illustrations in fifteenth-century style, are a delight to the eye. The only criticism we have to make is this, that as the editor did not prepare the text for scholars but for the general public, a few phrases that savor too much of fourteenth-century frankness might have been veiled, out of deference to twentieth-century squeamishness. The book is called 'The Knight of the Toure,' and is published by George Newnes, London (New York: Charles Scribner's Sons).

Volume III. of 'The Philippine Islands, 1493-1803' (Cleveland: The Arthur H. Clark Co.) contains translations of some thirty documents covering the period 1569-1576. Most of these are related in some way with the first conquest of Manila in 1570, and with its permanent occupation and the establishment of the seat of Spanish government in Luzon in 1572. It is interesting to note how this evidence all points to the possession by the Tagalogs of a more advanced state of agriculture, government, etc., as well as a greater initiative, at the coming of the Spaniards than the other tribes had. Already at this early date the controversy between the friars and Spanish civil authorities begins to outline itself, and we find Father Martin de Rada protesting in 1574 to Governor Guido de Lavezares (successor to Legaspi, who died in 1572) against the levy of excessive tribute on the natives in the form of gold-dust, cotton cloth, wax, rice, etc. In this early controversy the right was nearly all on the side of the fathers. The answer to De Rada by the dozen leading Spanish captains then in the islands, most of whom had received "encomiendas" (divisions of territory and people), is an interesting exposition of exploitation as it was in 1574. They defended the tribute on various grounds (the one in reserve being their need of the proceeds), finally saying that the natives resist the tribute because they "make it a point of honor to pay only when forced." They add naïvely: "They like to be compelled to do so." We find the Spanish Government forbidding these "encomiendas" in 1574. Volume III. contains reproductions of a painting representing the landing of the Spaniards at Cebú in 1565, and of a portrait of Father de Rada; also, a map of Legaspi's first landing-place and a reduced facsimile of an old map of Asia, in Ortelius's 'Theatrum Orbis Terrarum.'

'American Diplomacy in the Orient,' by John W. Foster (Houghton, Mifflin & Co.), is, as the author says, "a brief history of the diplomatic intercourse of this Government with the Orient," to facilitate "a correct estimate of the policy which has controlled the American people in their contact with the countries in that quarter of the globe." The Turkish Empire and Persia are omitted. The book is written *currente calamo* by a lawyer who has had a good deal of experience in the international field, but we do not know that it throws much new light on the subject, or indeed gives us any greater means than we had before of forming a correct estimate of our Oriental policy. To convince others, one must be convinced himself; and the limits of Mr. Foster's convictions are those of a cheerful opportunism. "The hopeful citizen must believe that the system of government and the wisdom of its public men will be equal to the emergency and the responsibilities." Obviously anybody who must believe this will always be satisfied with the results. The book contains in a condensed form a good deal of information for which we usually have to go to encyclopædias; and in this lies its chief value.

It was only just before Christmas that Archbishop Temple died, but Mr. Charles H. Dant has already compiled a biography of him, which is published in London by the Walter Scott Company, and imported here by Charles Scribner's Sons. It takes particular notice of the Archbishop's connection with the west of England, and is mainly anecdotal. Theologians of High and Broad Church alike will read with wonder Mr. Dant's statement that Dr. Temple, when Bishop of Exeter, "wished for the different classes in the church to be linked together firmly and with continuity, from the child fresh from the baptismal font to himself, the head of the diocese, who in turn carried on the linking process to the Archbishop, he to the Crown, and the Crown to the Godhead."

In the Rev. Fletcher Moss's 'Pilgrimages to Old Homes,' mostly on the Welsh border, a gossiping chronicler, who is his own publisher at the Old Parsonage in Didsbury, England, and whose pages reflect a genial and unconventional nature, leads us to ruined abbeys, old manor houses, picturesque villages, and indeed to any out-of-the-way place, provided only that it have a flavor of antiquarian interest and be not too far from the Welsh border. Entertaining his talk is, always, even though it be inconsequential and discursive. If it were not for his strong sense of humor, the personal note so constantly maintained would become tiresome; as it is, one not only puts up with it, but soon thinks it amusing. The value of the book is much enhanced by its abundant illustrations, which show us innumerable old dwellings, from modest cottages to castles, for the most part half-timbered and delightfully unhackneyed. Here and there a landscape gives some idea of the rolling borderland, where quiet streams creep under low arched bridges, and where ivy mantles the walls of ruined towers. One on whom this hurrying century lays a heavy hand, may find it hard to adapt his mental gait to a literary method of such ample leisure, but the book will afford many a happy hour's entertainment to those who care for the quiet of a remote English village.

The Rev. W. E. Griffis's 'Young People's History of Holland' (Houghton, Mifflin & Co.) adds another to this prolific author's already respectable list of books on the history of the Dutch people. The present volume is a narrative history of Holland from the earliest times to the coronation of Queen Wilhelmina. It is printed on good paper, in large type, and accompanied by twenty-four very good illustrations. The story is told simply, and, for the most part, clearly and interestingly, in a style commonly supposed to be adapted to the understanding of "young people." The book will undoubtedly have the same success that Mr. Griffis's other books for the same class have had. If it is necessary, however, to be strictly accurate in this kind of work, the author has laid himself open to criticism. When chronicling mere external history he is successful enough, but his treatment of institutions reveals some curious misapprehensions, as when feudalism is, with great confidence, stated to be a "stage of progress" through which all people pass. The main criticism to be urged, however, is this: the reader will in general be confirmed in the idea, which probably has already been well fixed, that "Catholic" is synonymous with tyranny, bigotry, and retrogression; that "Protestant" is synonymous with liberty, toleration, and progress.

The name of Thomas Hodgskin is almost unknown to this generation, and it is improbable that the attention of many readers should be attracted to his works. We must say, however, that the essay by Élie Halévy (Paris: Société Nouvelle de Librairie et d'Édition), bearing the English philosopher's name as its title, would revive interest in his views if such revival were possible. It is not certain that Marx was familiar with Hodgskin's writings, but he adopted much of their theory; and their influence on modern economic thought is, as M. Halévy shows, considerable. Those whose studies take them in this direction may well read this interesting account of a thinker who, although forgotten, was perhaps intellectually the peer of Godwin, Malthus, Bentham, and Ricardo, of whose systems he was an acute critic.

The Canadian Rockies, between the sources of the Athabasca and the Kicking Horse Pass, are the subject of the first two articles in the *Geographical Journal* for May. Dr. Norman Collie describes his explorations last summer in this region, which resulted in the barometrical determination of a number of heights, the discovery of a pass, and a considerable addition to the topographical knowledge of various outlying portions of the mountains. Professor Coleman of Toronto confines himself to an account of the Brazeau ice-field. Very different is the country of which Baron E. Nordenskiöld writes—"vast tablelands, snowclad fells, wild mountain valleys with luxuriant forests and enormous plains"—lying on the boundaries of Bolivia and Argentina. It is interesting not only for its natural features, but for its fossil mammals, its relics of a pre-Columbian culture, such as burial urns, arms, and ornaments. At one spot luminous insects were very numerous and showed great divergence in luminosity. "For instance, there was an elateride caterpillar, the head emitting a red light, while each segment was provided with two spots which, like the final segment, emitted a green light. The red glow was constant, the green interrupted at intervals." In an appreciative notice of Mr. Balch's 'Antarctica,' Dr. H. R. Mill, while not accepting fully all its statements, says that "Mr. Balch has done a patriotic service, and also a service to science, in setting out the real achievements of Charles Wilkes."

M. V. O'Shea, in the May number of the *American Journal of Sociology*, brings a scientific argument to bear against the present tendency to shorten the college course. It is the application of the doctrine developed by John Fiske and others that the advancement of the human species over other forms of animal life is due largely to the relatively long period of unripeness in the human individual. To throw the college student into the struggle for life a year or two earlier is to cut short his period of plasticity, and hence to lessen his probable contribution to the forward movement of the race. The general reduction of the period of plasticity means a deadening of civilization at the head. In the interest of progress, therefore, those in authority in our educational institutions should seek means not to shorten but rather to lengthen that period of life in which the mind opens most readily to new ideas.

Of the two newly organized German societies for the investigation of the Orient, the Vorderasiatische Gesellschaft and the Orientgesellschaft, only the latter is engaged in excavations. The work in Babylon progressed so successfully under the leadership of the experienced Dr. Robert Koldewey that the Society has recently turned its attention to an entirely new field, the old Babylonian necropolis in Fara. The preliminary diggings by Koldewey and his chief assistant, Dr. Andrae, who have been working there with 160 men, have brought enough to light to show that good relics of the earliest periods may be expected. Nearly all of the utensils unearthed evidently belong to one period, and but few cuneiform inscriptions have been found. The finds indicate that the civilization of Fara belonged to a period between the stone and the bronze ages. In all probability the place was never inhabited, but was used only as a necropolis. The Vorderasiatische Gesellschaft confines its labors to the publication of special researches in its *Wissenschaftliche Mittheilungen*, and to popular expositions of the results of Oriental discoveries.

The universities and academies of Switzerland, especially those of the German cantons, continue to be the Mecca for the women students of central Europe. In these institutions during the past winter term the total enrolment of women was 1,503, or fully 50 per cent. greater than in all the German universities combined. This is all the more significant because the total student enrolment was only 5,415. Fully 75 per cent. of these women were foreigners, and among these the Russians greatly predominated, especially in the medical department.

German savants are agitating the organization of a "Sprach-Akademie" modelled after the French Academy, the intention being that this body shall be the last and final court of appeal in matters pertaining to the German language, and especially idiomatic purity, in view of the danger of corruption and distortion through the influence of foreign tongues. The details of the programme have not yet been published.

True to the occasion, Mr. F. Gutekunst, Philadelphia, sends us a pleasing photographic portrait of Emerson, printed without glaze, from an untouched negative. The plate is large, about 13x16, and the bust figure is well set in this area. The poet is shown in post-meridian but not in senile aspect, with a genial, relaxed expression, quite unconscious of posing for the camera. The face is well lighted. The portrait is an excellent one for private hanging or for the wall of the schoolroom, church parlor, or other public place.

—Emerson's centenary will have no better celebration than the "Centenary Edition" of his works, two volumes of which now published (Houghton, Mifflin & Co.) give good assurance of what the edition is to be in its appearance and the character of its annotations by Edward W. Emerson, who also writes a general introduction. Outwardly the books are very attractive, a little taller than the "Riverside" volumes; the pages carrying about the same amount of matter, the type of a different face, but quite as good. The binding is excellent in cloth, color and design. On each title-page a pine tree takes the place of the pine-tree branch of the "Riverside." The portrait is one of the best of Emerson's many, its date, 1854. The later volumes will not exhaust the list of those worth knowing. The introduction is conceived and executed in a happy manner with filial affection and delicate reserve. The only approach to elaboration is the treatment of Emerson's doctrine of Evolution, which found clear expression in the 'Nature' of 1836—not so clear, however, as many have supposed, seeing that the motto verses, "A subtle change," etc., were not appended to the first edition, but to the second, when in 1849 the first (of 500 copies) was at length entirely sold. The editor is plainer about this in his notes than in his sketch, which, but for the notes, would help perpetuate the general misunderstanding. There is no mention of that once famous book, 'Vestiges of the Natural History of Creation,' in the account of Emerson's evolutionary ideas, and indeed it was published in the same year (1844) with the second volume of 'Essays' that contained the second 'Nature,' in which occurs Emerson's most elaborate expression of those ideas. But, if Chambers's book contributed nothing to Emerson's doctrine, it must have given it much valued, if not valuable, confirmation. Too much may easily be made of Emerson's evolutionary ideas. They were not Darwinian. Of natural selection they had no hint, and such a book as Professor Osborn's 'From the Greeks to Darwin' is convincing that evolution had many expositors before Emerson's day. Mr. Edward Emerson's notes upon his father's essays and addresses are admirable. They are never merely curious; they all have the stamp of use. They place quotations, relate the essays to other essays and unpublished matter, give cross-references to passages similar to those annotated in Emerson's journals, poems, and other essays, brighten forgotten reputations, correct mistakes, and furnish many illustrations, explanatory or confirmatory, of Emerson's ideas. They are a very real addition to the new edition, and would justify it if it had no other special recommendations.

—There have come to hand two volumes of Bell's 'Handooks of Continental Churches' (Macmillan). Their appearance in close succession leads one to hope that this series will be carried on with more vigor than of old. According to the latest list furnished by the publishers, only five volumes are now in print, although it is several years since we noticed the first one, which was devoted to the cathedral of Amiens. The new volumes are devoted to Notre Dame of Paris, and to the abbey and town of Mont Saint Michel-en-mer, that marvellous monastery and fortress which is set on the edge of the Norman coast like the wonderful jewel that it is. The two books are furnished by Charles Hiatt, who had contributed not less than four separate volumes to the English Cathedral Series and the accessory notices of abbeys and minsters, and by H. J. L. J. Massé, who has been equally diligent in this work. Both recognize, each in his own brief preface, that their work must be founded on the writings of archæologists and students of art who have gone before. In the case of Notre Dame, there are noticed the several works of Viollet-le-Duc in which the Paris cathedral is treated so much in detail, and lament is made that the British Museum does not contain a complete set of the works of that exceptional writer. Hoffbauer's 'Paris à travers les Âges' and Guilhermy's little book are also mentioned, and, for Gothic architecture in general, Professor Moore's 'Development of Gothic Architecture.' So, for the Abbey, there is mention of the several writers who have dealt with the group of buildings upon that isolated rock, though it seems odd that the rather satisfactory volume of Édouard Corroyer, devoted exclusively to Mont Saint Michel and fully illustrated, or the more recent work of Gout, should be mentioned only among the "numerous" writings named in a sweeping way. It must not be thought, however, that in the case of Mr. Massé's work there is any undue leaning upon his authorities. It is evident that the building has been carefully examined in all its parts—evident, too, that his sym-

pathy was strongly awakened by the "marvels" of Mont Saint Michel, and that he has longed to explain its beauty and its varied charm to possible visitors as well as to distant readers. This perhaps has been done as well as could be done without a deliberate description, step by step, with plan and diagrams accompanying the text, referred to continually in the text, helping the text to the reader's full comprehension. Such description as that is hardly given. The account of the building is minute and detailed, and very good half-tone prints are as numerous as could be expected; but assuredly one must have a strong sense of the possibilities and probabilities of Romanesque and Gothic architecture if he is to bring away from the reading of this book, say in America, a clear sense of what the building is like.

—Still more in the case of the Paris cathedral does the reader feel that the work might have been done better. Writing for Englishmen, Mr. Hiatt is continually comparing the French architectural design with that which his readers may be assumed to know more intimately. The student has a right to ask whether the book—whether all these books—are intended for the visitor to the building rather than for the distant student. If they are, then it is a question whether the straightforward guide-book does not do this kind of work better. Certainly a treatise upon the cathedral or the abbey like that which Gsel-Fels has devoted to many an Italian church would tell the traveller more about the building which he is in the way of examining on the spot.

—Mr. Marcus Dorman begins his 'History of the British Empire in the Nineteenth Century' (Lippincott) with a volume of four hundred pages, large octavo, which carries the reader no further than the death of Pitt. The real dates, however, are 1793-1805, for the author finds it necessary to go backward until he reaches the commencement of England's part in the wars of the French Revolution. Mr. Dorman concludes the present instalment of his work with two chapters on the intellectual and industrial progress of England during the period treated; but any distinctive value which his narrative may be said to possess arises from his account of politics and diplomacy. He has used the records of the Foreign Office and the Treasury to some purpose, and on the political side at least the text is well informed. We have, however, been impressed by the lack on Mr. Dorman's part of impartiality—we will not say of "robust impartiality," but of ordinary historical impartiality. Wherever there is question of England's relations with Napoleon, his utterances must be scrutinized very closely. For instance, he has read Mr. Rose's account of the share which the British Government had in Cadoudal's conspiracy against the First Consul, inasmuch as he quotes Mr. Rose in a note. "Mr. Holland Rose," he says, "has discovered evidence that 'some at least of our Admiralty officials also aided Cadoudal.'" But such a quotation by no means gives the reader a just idea of Mr. Rose's discoveries or conclusions. It is quite clear that important persons in the British public service were guilty of complicity in a plot to assassinate Bonaparte, and this fact was known at Paris. Mr. Rose, a really impartial writer, metes out severe reprobation to those concerned, and points out how Napoleon's mind was embittered during the whole subsequent course of the struggle with England by his recollection of such an episode. Our chief criticism of an unfavorable kind is that Mr. Dorman writes in a spirit which is less open-minded than could be wished. Our chief praise must be that he has a first-hand knowledge of the literature, both light and heavy, which lies closest to his subject. Without possessing any remarkable powers of style, he avoids dulness, and if his first volume is rather long for an introduction, it does not create the impression of being wilfully padded. It is in ordinary political narrative that he appears to best advantage. His disquisition on free trade and his criticism of Malthus are not very striking, nor do we see why he should have devoted a whole page to Beethoven. In conclusion, we may say that Mr. Dorman is rather fond of making broad statements. The book closes with the following passage, which furnishes a fair example of his style as a writer of generalizations: "This brief sketch of social life at the beginning of the nineteenth century shows that most of the customs, institutions, and modes of thought were much the same as now; and although some of the prejudices due to sects and classes have to a certain extent since been broken down, it is doubtful whether our present social system is not more a modification of old ideas than an earnest of the advent of new fundamental principles."

TWO PORTRAITS OF SHAKSPERE.

A New Portrait of Shakespeare: The Case of the Ely Palace Painting as against that of the so-called Droeshout Original. By John Corbin, author of 'An American at Oxford.' John Lane. 1903.

The latest discovered of the many "portraits" of Shakspere is the so-called Droeshout Original. The portrait which, next to this one, bears the greatest resemblance to the Droeshout engraving is that known as the Ely Palace portrait. Is either of these the original from which the engraving was made? If so, which? Mr. Corbin essays, in the volume before us, to show that "the so-called Droeshout Original is probably a fabrication, and that the Ely Palace painting is probably a life portrait." In our opinion he has fairly succeeded in proving the first contention, and has failed of proving the last.

There is absolutely no external evidence for the authenticity of either portrait, and any opinion as to the worthiness of either of them to represent the character of the great poet can only be personal and of no authority. Mr. Corbin thrice quotes Mr. Sidney Lee as saying that the features in the Ely Palace portrait "are of a far more attractive and intellectual cast than in either the Droeshout painting or engraving." Our own opinion, if it were worth anything, is that the Ely Palace portrait represents a somewhat mean and stupid type, with far less character and intellect than that of the engraving; but no such opinion *is* worth anything. There are only two kinds of tests which can be applied to these portraits or to any other of the many painted "portraits of Shakspere." The first deals with technical questions concerning the material on which the portrait is painted, the manner and handling, the possible amount of retouching and alteration, etc. Such tests require the utmost expert knowledge of seventeenth-century painting on the part of the person who applies them, and the most careful and minute examination of the painting itself. They can never give anything but negative evidence; they may prove a forgery, but cannot establish genuineness. Of a picture that should successfully pass them all, one could only say that it was probably of the seventeenth century and possibly a portrait of Shakspere. The other test deals with questions of the degree and kind of likeness between the portrait to be considered and the two certainly authentic portraits of Shakspere—the Droeshout engraving and the Stratford bust. For the application of these tests a general knowledge of art and the practical experience of a portrait painter are the most desirable qualifications, and the tests may be applied with due caution to photographs of the pictures, and with still more caution even to engravings of them. Having no access to the original paintings, and little competence to judge of the first kind of tests, we must accept the results of these tests at second hand. The second kind of test we can to some extent apply for ourselves to the reproductions given by Mr. Corbin.

It is regrettable that Mr. Corbin has relied upon wood-engraving for the reproduction of the portraits. He says of these engravings that they were "executed in the modern manner—that is, by throwing a photograph of the portrait on the engraver's block, a process that insures the utmost precision of detail"—but how little it does insure such precision is shown by his statement, immediately afterward, that the engraving of the Ely Palace portrait misrepresents the growth of the mustache and the hem of the collar. If the engraving is not to be trusted in such matters as these, how can it be trusted in the delicate matters of form and expression on which likeness and character depend? The frontispiece of the volume is a rather poor photogravure of this portrait, and it certainly gives a different impression from that conveyed by the wood-engraving. The latter has been filtered through the personality of the engraver, and one is left in doubt how far he has exercised his fancy on other things than the mustache and collar. Of the "Droeshout Original" we have only the wood-engraving.

That there is some connection between both these portraits and the Droeshout engraving is evident at a glance. The coincidences of pose, lighting, costume, etc., are too many to be the work of chance. Either of them may be the original of the engraving, or a copy from it, or a copy of the original at one or more removes. The so-called Droeshout Original resembles the engraving the more closely of the two, and, reversing Mr. Corbin's order, we shall dispose first of its claim. In discussing any of the portraits we may neglect all that is said about the color of hair and eyes. The Stratford bust, which is the only authority there ever was for these matters, must have been colored from verbal instructions, and has since been whitewashed and recolored. But every painter knows that the color of eyes and hair are such relative matters—so altered by lighting and surroundings and the scheme of the picture — that no two

painters would make the same report, and probably no one painter on two occasions.

In his argument against the authenticity of the so-called "Original," Mr. Corbin relies mainly on two points. First, in the different states of the Droeshout engraving the mustache is gradually darkened and enlarged; the mustache in the painting is darker and larger than in any state of the engraving, and this would seem to indicate that the painting was copied from a late state of the engraving. Second, the costume is more ill-drawn in the painting than in the engraving; if the painting were the original, we should expect it to be less ill-drawn. The importance of the first of these points is somewhat minimized by the fact that local color was habitually neglected or subordinated by seventeenth-century engravers, and that an original painting would certainly show both hair and mustache of a darker tone than would an old engraving from it. The enlargement in size is more important, but seems hardly great enough to be decisive. As to the costume, the case is stronger. It is true that the painter may well have done what Mr. Corbin assumes that the engraver did—he may have spent most of his time on the features and merely indicated the general lines of the costume, from nature, completing it afterwards from memory, a not uncommon habit of portrait painters so late as Gilbert Stuart, who seldom painted more than the head from life, and who frequently made the body too small for the head, as it is in the case of this painting. The contention that the errors in the drawing of the costume could have been made only "at a time when Elizabethan costume was obsolete," seems disproved by the fact that Droeshout actually made them. Still, although Droeshout's skill seems to us far less contemptible than it has been thought, he was hardly a man to improve on his original, and the fact that the painting exaggerates the errors of the engraving is a probable indication that the painting, not the engraving, is the copy. As far as the woodcut enables us to judge, the head itself gives the same indication. It is less wooden than the old engraving, and, as Mr. Corbin says, "more like a human being," but it seems to us much less individual and characteristic. The features are, as it were, modernized and softened, but weakened at the same time. They show no measurable discrepancies, but they fail to give the sense of an immediate vision.

So much for the general artistic argument. The more strictly technical argument seems still more conclusive. The advocates of the genuineness of the portrait seem to have proved that the panel on which it is painted is of "old English elm"; but as they admit that there are traces of another portrait underneath this one, or at least of another costume, the age of the panel goes for nothing. The common habit of the eighteenth-century forger was to use an old portrait as the basis of his new Shakspere, and in view of that fact the argument that the painter of a life-portrait may have used an old panel is more ingenious than convincing. If he had done so, is it not probable that he would have *turned it upside down* to avoid confusion? Certainly that is what a modern painter would do. The inscription seems to be given up by every one, and the conclusions drawn by different observers from the style of painting are radically opposed. There remains a statement by Mr. Corbin himself which, if uncontradicted, should settle the matter. He says:

"Some of the worm-holes are clear cut, others seem painted round the edges. At least one (on the line of the right cheek-bone) had, according to my notes of 1896, been painted over; it was then discernible only because the paint had sagged into it. In 1901 the surface paint in this worm-hole had apparently been picked away."

Our conclusion is that the so-called Droeshout Original is a careful copy of the Droeshout print. It does not necessarily follow that it is one more, and the cleverest, of the eighteenth-century forgeries. It may possibly have been produced in the seventeenth century for some admirer of the great poet, who could exclaim with *Gullio*, in "The Returne from Parnassus," as quoted by Mr. Corbin on his title-page, "O sweet Mr. Shakspeare! I'le have his picture in my study."

The balance of opinion seems inclined to the view that the panel, the painting, and even the inscription of the Ely Palace portrait are old, though the last seems to have been partially restored, as have other parts of the work. The costume is much better drawn than in the Droeshout engraving, yet shows such a degree of error as might account for the greater faultiness of a hasty copy. The head, however, while showing a general resemblance to the engraving, differs markedly from it in several particulars, by no means all of which have been pointed out, though Mr. Lee considers the differences sufficiently great to "raise doubts whether the person represented can have been intended for Shakespeare." Mr. Corbin thinks that in the painting "the face —or at least the right cheek—is viewed from a point slightly more to the front" than in the engraving, and that this shifting of the point of view 'alters the line of the cheek," eliminating the sharp drawing of the eye-socket and cheek-bone, while Mr. Frank Jewett Mather thinks that the same cause "explains the fact that the eyes appear to be too close together." We are inclined to think both these gentlemen mistaken. The whole head is smoothly oval, with a sort of mushiness of drawing which is by no means confined to the cheek-bone, and all the features are too near together. The left eye is, perspective considered, even nearer the nose than the right, and the upper lip is much shorter, while the chin is longer, heavier, and much farther forward than in the engraving. The smallness of the triangle formed by the eyes and mouth, compared with the vast, empty oval surrounding it, and especially the nearness to each other of the eyes, gives the head the mean and stupid character we have commented on.

As far as these differences between the two heads are definite and measurable, and apart from the general lack of accent in the painted head, there is nothing in their existence to show with certainty which of the two renderings is the nearer to life, or which is the more likely to be a copy of the other. We have, however, another portrait of Shakspere, second only in authority to the Droeshout engraving, the Stratford bust; and in those respects in which the Ely Palace portrait most differs from the engraving, it differs still more widely from the bust. In the engraving the eyes, instead of being close together, are rather noticeably wide apart; in the bust they are still farther separated. The engraving has a longish upper lip, which in the bust becomes so exaggerated that an accident to the nose has been invented to account for it. If either painting or engraving is copied from the other, it is evident that the one which more nearly resembles the only independent authority is more likely to be the original, and that the Ely Palace portrait cannot, therefore, be the original of the Droeshout print. Yet its relation to the print is obvious; the pose, costume and lighting, and several of the features being nearly identical. Mr. Corbin's conclusion from these facts is as follows:

"Granting that the Droeshout engraving may not have been taken from the Ely Palace portrait, it must have been taken from a portrait that in all essential points of features and costume was identical with it. Of all the painted portraits, accordingly, the Ely Palace portrait has the strongest claim to be regarded as a life portrait."

In our view it is just this substantial identity with the lost original of the print which proves that the painting is a copy. If a copy of the engraving, however, it is much less close than the so-called Original, and on that account all the likelier, perhaps, to be an *old* copy. The superior drawing of the costume might be taken to indicate that it is an old copy of the genuine original from which Droeshout worked; and that, in our opinion, is the utmost that can be claimed for it.

Finally, there are one or two points bearing on the whole controversy which, so far as we know, have not been noticed. It is well known that the human head is rarely symmetrical. On the other hand, lack of symmetry in a bust or painting may well result from poor drawing, and it is not very safe to reason from it. In both the authoritative portraits of Shakspere one eye is farther from the nose than the other; in the engraving it is the left eye, in the bust the right. This may be the result of carelessness and lack of skill, or it may indicate that the engraving is reversed. It does not seem inherently unlikely that Droeshout, working from an original of no artistic value—an unnamed original—should have done so in the easiest way, without reversing his drawing on the plate, and that the print from that plate should therefore be reversed. Many instances of such reversal by the engraver, even of important pictures, are known to exist. If a demonstrably old picture should ever be found, with the face turned to the (spectator's) right instead of to the left, but otherwise identical with the Droeshout engraving, it would, in our opinion, have a fairer title to be called the Droeshout Original than any that has heretofore been brought forward.

Whatever may be the worth of his results, Mr. Corbin has conducted his discussion with eminent fairness and scrupulous courtesy, and has produced an interesting and readable book, which his publishers have presented in an appropriate and pleasant dress. Apart from a confusion of dates on page 23 and the substitution of "slight" for "sight" on page 77, we have noted no signs of carelessness.

MORE NOVELS.

The Better Sort. By Henry James. Charles Scribner's Sons.

Sarah Tuldon. By Orme Agnus. Boston: Little, Brown & Co.

The Main Chance. By Meredith Nicholson. Indianapolis: The Bobbs-Merrill Co.

La Fille du Braconnier. Par Achille Mélandri. Paris: Armand Colin.

Mr. Henry James's command of the art of writing short stories needs to-day no comment. Long ago he perceived what could be done in that form, passed through experimental stages, and arrived at extraordinary facility and assurance. To refer, therefore, to the technical merit of his latest volume, entitled 'The Better Sort,' is almost an impertinence, and excusable only as a reminder that beneath an elaborate ease of manner and an apparent negligence of issues there is a structure of steel, and a complete control of all the means essential for the production of the desired effect.

On the whole, there is little in the volume to strain the intelligence of those perverse persons who seem to read Mr. James only to complain that he is incomprehensible. Indeed, if it were possible for a writer so imperturbable to strive to placate those whom he could never hope to please, indications of such amiable intention are not wanting. The title itself suggests deference to popular opinion. Most of the tales begin promptly, and the endings are not irrationally ambiguous. Then there are people possessing stores of undiluted emotion moving with some impetuosity to a perceptible climax, and other people whose morals are more settled than those of the people whom "Maisie knew." The author, regarding the work as an unprejudiced outsider, may have concluded that this sort must be the better sort—*his* better sort, at all events. And a more positive intimation of sensibility to criticism appears in the tale entitled "The Beldonald Holbein," wherein the narrator exclaims in pathetical parenthesis: "It is not my fault if I am so put together as often to find more life in situations obscure and subject to interpretation than in the gross rattle of the foreground."

Fortunately, such concessions to the general (if concessions they be) need not disturb the enjoyment of those whose pleasure in Mr. James's work is almost in proportion to his withdrawal from the noisy foreground. In the tale entitled "The Story in It," Col. Voyt and Mrs. Blessingbourne talk about the novel of British and American manufacture, comparing it with that made in France. Though disagreeing vivaciously on several points, they agree that the novel written in English shows a sense of life comparable with that of children and kittens, and that our novelists are "poor twangers and twaddlers who remain outside, who pick up a living in the street." Mr. James has never been more securely and intimately inside. In spite of the presence of much admired natural emotions, the real spectacle provided is mental and spiritual fencing and skirmishing, with a play of attraction and repulsion, with approaches and retreats, doubts, discoveries, surprises, shocks—all that really does go on between people whose make-up is not primitive. Such a spectacle no other English-writing novelist has ever even dreamed of providing. For literary purposes Mr. James appears to be the discoverer of human relationships which don't immediately strike the eye, are not just simple and notoriously clear.

A recent critic who, with strange perversity or obliquity, persists in describing Mr. James as a photographer, speaks of his having "removed himself and his beautifully mounted camera bodily to the old country," and suggests that he did so because he wanted to delineate manners and could find in America none to delineate. It is probably true that he deliberately sought a society with manners, that is, unquestioned traditional ways of behaving, speaking, thinking, or even preserving intellectual vacancy; but he needed that society for the delineation of something more than manners, for the study of human relations neither simply beautiful and sacred nor simply gross and horrid. That he has come to find these relations fascinating in proportion to their delicacy and mystery, seems to us not a matter for reproof, but one furnishing occasion for complimenting his conscience and courage. Such situations and relations as those of "Broken Wings," "The Beast in the Jungle," "The Papers," are not undertaken and developed without an abundance of daring and patient resolution. To examine just these three tales is to be amazed at the display of an extensive and impartial observation of life, at the mastery of some dominant human motives with their thousand qualifications and modifications, and at the variety of capacity for brilliant representation. In "The Papers" the author enlarges his usual scope, and satirizes with much humor and some fierceness the modern mania for self-advertisement; and in the same tale he records a most touching instance of the sacrifice of self on the altar of love. The offer of Howard Bight (a born journalist) to give away his methods, his secret self, to Maud Blandy (a hopelessly aspiring journalist)—"For the Papers. Oh, for the Papers only"—and to get her a hundred pounds for the "copy," affects one as a tribute to the great passion little short of sublime.

Mr. James's scorn of the general rage for publicity shows again in "The Birthplace," a careful perusal of which might materially diminish the rush of tourists to overrun the earthly habitations of the mighty dead. The situation here is the appointment of one Morris Gedge to the position of warden of a shrine which had always figured to him "as the most sacred known to the steps of men, the early home of the supreme poet, the Mecca of the English-speaking race." Thereafter Gedge's sensitive soul is seen in conflict with his sense of duty as showman—a duty fervently urged by his wife, a weary woman, bent on keeping a roof over her head, no matter what the cost to her husband's sensibilities; Gedge's struggle, exquisitely delineated, ends in abject submission to duty and domestic tenderness, ends in his winning an international reputation for his eloquent discourses to the hateful, gaping, squawking crowd which he personally conducted up and down and over the shrine. From the picture of Gedge's joy when he got news of his appointment, sitting in the gray town library of Blackport-on-Dwindle, one may get a notion of the tragedy in his submission:

"The tears came into his eyes sooner still than into his wife's while he looked about with her at their actual narrow prison, so grim with enlightenment, so ugly with industry, so intolerable to any taste. He felt as if a window had opened into a great green woodland, a woodland that had a name, glorious, immortal, that was peopled with vivid figures each of them renowned, and that gave out a murmur, deep as the sound of the sea, which was the rustle in forest shade of all the poetry, the beauty, the color of life."

Alas, poor Gedge! All his life the victim of disappointment, the great misfortune was to get at last the very thing that if, given a choice, he might most have wished to take.

A novelist who takes for his background rural Wessex in the forties provokes an inevitable comparison. In 'Sarah Tuldon' we are introduced to the typical peasant family of Mr. Thomas Hardy. The heroine is the beautiful daughter of an ill-paid and drunken laborer handicapped by a querulous, incapable wife and countless younger children. All the elements of the D'Urberville *ménage* confront one at the outset. The scene is a country village near Dorchester—better known to fiction and to fame as "Casterbridge"; the dissolute young squire, who is an essential in every novel of country life since the 'Vicar of Wakefield,' bears the name of Alec, like his D'Urberville prototype, one is prepared for a thoroughgoing plagiarism. But though Mr. Agnus has taken no pains to invent new *dramatis personæ* for the stage-setting of Mr. Hardy, the development of the story is entirely original. Sally Tuldon, with all the external make-up of Tess, is a clever vixen who outwits even the squire, and her story goes to prove that a strong-minded woman who has her own way is a blessing, though often a blessing in disguise, to a whole village, not to say a countryside. The book is a complete and amusing apology for a shrew, and the taming in the sequel is left to the hand of time and is none too thorough. Sally Tuldon is all that Tess might have been had she owned a strong will. After reforming her family by dint of talking them down, she marries without his consent a well-to-do farmer, and reorganizes him and his. We are far from the philosophy and the tragic atmosphere of one of the original Wessex masterpieces, and we find in these pages no appreciation of the beauty of the country which, in its sombre as in its smiling aspect, touches the imagination of Mr. Hardy's readers. But there is much humor and force in 'Sarah Tuldon,' and, while the dialogue of the laborers of Wessex is not so memorable as that of Mr. Hardy, it is probably somewhat nearer to the early Victorian reality.

'The Main Chance,' since the leading characters naturally keep an eye on it, is a title that will fit any novel of commerce. The present instance is admirably adapted for the strenuous idleness of the business man for whose recreation this new type of literature is apparently intended. A trolley-car adorns the cover, the hero is the receiver of a traction company, the villain a bank cashier, and the final tragedy is precipitated by the latter's weakness in selling two hundred shares of traction stock to the wrong man. When we add that the only son of the chief citizen of Clarkson is abducted in a buggy and held for a princely ransom in a deserted house whither he is tracked by the hero, it will be seen that few of the in-

teresting features of life in "a trans-Missouri State" have been omitted. The heroine has more character than is usually allowed her in the novel of commerce. She is a graduate of Smith; but, the author having made this concession to the modern young woman, hastens to assure us that she hardly had a bowing acquaintance with her studies and was on bad terms with the faculty; in short, her four years in the East merely modified her accent to suit the taste of the hero from Boston. Evelyn does, in fact, display an ineptitude for the simplest matters of business, which convinces one that she had great feminine charm. The book is written in forty-seven short and stirring chapters; the characters are well drawn, and the style is vigorous; but it will not "take tired people to the Islands of the Blest," which are unknown to the geography of the novel of commerce.

The French, as a rule, are saved from sentimentality by the keen and clear intelligence which is their most conspicuous endowment; but when a Frenchman writes "pour les jeunes filles," it is quite another story. In 'La Fille du Braconnier' a prolific writer, M. Mélandri, contributes another volume to the library of fiction that may be read by a French girl in the interval between her convent-school and her wedding-day. An English or American girl of any age would be profoundly bored by the tears and agitation, the touching coincidences, the wholly unconvincing incidents which in the end land the poacher's daughter in affluence in the very château whose demesne her father used to poach. The tale is redeemed from absolute mawkishness by a spirited account of the battle of Waterloo. "Le respect dû à nos lectrices," to quote the writer's phrase, ought naturally to bar out the ordinary tone and setting of the modern French novel. But the intelligence too has its claims, and one can only pity the "jeune fille" who in her teens is nourished on the "Girl's Own Paper" style of fiction while her English-speaking contemporary is reading Meredith and Hardy and Stevenson. It is rare, indeed, to find the latter after this liberal allowance declining, like her French cousin in later years, on the novels of Bourget and Prévost.

Across Coveted Lands. By A. Henry Savage Landor. New York: Charles Scribner's Sons. 1903. 2 vols. 175 illustrations, diagrams, plans, and maps. Pp. viii., 462, viii., 460.

Voyages au Maroc (1899-1901). Par Mis de Segonzac. Avec 178 photographies . . . une carte . . . et des appendices, politique, astronomique, météorologique, botanique, entomologique, numismatique, géographique. Paris: Armand Colin. 1903. Pp. xii., 410.

Mr. Landor's would be an extremely interesting record of Persian travel—Persia being the coveted land in question—if it could excite any trust in its accuracy. As the case stands, the numerous excellent photographs are its only confidence-arousing element. For the rest, Mr. Landor, by his attitude towards other travellers and authorities, and by his own vagueness on essential points, produces an unfortunately amateurish and unsatisfactory impression. Neither his attacks on Major Sykes nor his more general fulminations against official maps and geographical societies will go to help his own geographical standing. Independence of attitude and freedom from conventional opinions are excellent things in a traveller, but persistent captiousness and a parading of such different views can only remind of Sir Richard Burton on his weakest side. Yet Burton, however wrongheaded and bullheaded he might seem, could always base his dicta on a sound knowledge of the people he dealt with. Whatever his theories, they rested on carefully observed facts. Mr. Landor leaves a very different impression. For example, we are not told from first to last what his knowledge of Persian, if he had any, was. His travels seem to involve personal intercourse with the people. But indirect references make it plain that the case was not so, that he had need of an interpreter throughout. With that vanishes at once the first-hand value of his book. The labors of the Oriental as interpreter have to be taken, not with a grain, but with bushels of salt.

The residuum, then, which we have here is the record of the journey of an intelligent and observant but very opinionated man from Enzeli on the Caspian by Teheran, Ispahan, Yezd, Kerman, Naiband, Birjand, Nasratabad in Sistan and Nushki to Quetta. All this, of course, is ground of the most beaten, following the Oriental equivalent of a post-route throughout, and we cannot but wonder that it should have had attractions for a traveller of exploring instincts like Mr. Landor. The solution probably lies in the political prominence of Persia at present. This book is Mr. Landor's contribution to the Persian conundrum now before the English mind, Is Germany my friend, or Russia? His solution is emphatically pro-Russian: the keynote is struck at the very first in an encomium of Russian railway methods, and especially of the through train from Warsaw to Baku. Thereafter follows a very readable and lively account of observations and ideas on the route outlined above, giving special attention to manufactures and trade, actual and possible. All is evidently in thorough good faith, and probably Mr. Landor's studies in consular reports and the like are factually correct, but the general result does not inspire confidence either in his narratives or in his conclusions.

Very different is the impression produced by the Marquis de Segonzac's record of travel. The country through which he went has its questions, too, perhaps more presently burning than that even of Persia. Within, it is full of civil strife, more or less latent; and without, it is watched by jealous and longing eyes. Yet up and down through it, in three great journeys, went this officer of Spahis, in disguise, with native companions speaking the language, though, as he confesses, having no knowledge of literary Arabic, everywhere observing, mapping, photographing, collecting. How he, a wandering beggar for the most part, managed to escape observation and suspicion, to take these careful photographs—not so beautiful, it is true, as those of Mr. Landor, but much more to the point—to watch his chronometers and his compass, his barometer and hypsometer, to keep mapping his route, to fix so many points by careful astronomical observation, —that all must remain a mystery. For M. de Segonzac does not talk much about himself. He gives the barest diary of his movements from day to day, of weather and events—a narrative dry enough, but enlivened from time to time by touches of detail which show the trained observation of a man knowing the people among whom he was. Yet there are passages, too, in which the artist rises above the topographer, and the atmospheric mystery of a landscape is rendered in delicate French. And to it all, as he says himself, the conclusion is lacking. He will not touch "la question marocaine." He recognizes that it lies outside of the frame of his book. One protest only he will make. Exploring simply from lust of wandering or of extending science would be a poor pastime. "Avant tout il [l'explorateur] aspire à servir son pays, et, dans ses rêves de nomade, il voit l'ombre de son drapeau s'étendre partout où il est passé." That is frank at least. His preface, M. Eug. Étienne, Vice-President of the Chambre des Députés, is much more detailed on Algeria's need of Morocco. But they must, he holds, come into one another's arms through natural evolution, fostered by the spread of French influence.

Three great journeys are recorded here. One led our author, as a beggar, living by alms, from mosque to mosque, through the mountains of the Rif, untouched by explorers, the only unmapped part of the littoral of the Mediterranean, from Fez to Melilla and back to Wazzan. The second journey was made under very different conditions, in the company and under the escort of a venerated Sharif (name naturally suppressed), who was willing to give the shelter of his sanctity to this disguised French explorer. Throughout, be it remembered, it is evident that the French are on remarkably close terms with these Sharifs of Wazzan—rivals to the present Sultan, and of an older line—who are at present making trouble in Morocco. On this journey the "Moyen-Atlas"— a term unknown to our maps, but found on German ones—was three times traversed, new ground throughout except for a single crossing by Caillié in 1824-28 and Rohlfs in 1862. Finally, with a single companion, M. de Segonzac made a pious pilgrimage as merchant in a small way through the holy land of Sus, journeying from Dar al-Baida as far south as Tisnit and back to Mogador. Thus three parts of Morocco, two absolutely unknown before and one only touched, have been here unveiled with tolerable completeness. And all is stated with scientific brevity and certitude.

The appendices take up 114 pages, and are careful investigations and descriptions, by specialists called in to the task, of the results of these journeys. A greater contrast, negatively and positively, than this book presents to Mr. Landor's could hardly be imagined.

The Loyalists in the American Revolution. By Claude Halstead Van Tyne, Senior Fellow in the University of Pennsylvania. The Macmillan Co. 1902. Pp. i.-ix., 1-360.

In considering a work based upon the sources, it is important to know what sources have been used. Mr. Van Tyne, nevertheless, gives no bibliography, because, as he says, the bibliography in Flick and in Winsor make it unnecessary to do so. We would suggest that in a work of this kind a bibliography, of the sources at

least, is indispensable. In the present case it does not appear that the author has made much use of the sources mentioned by Flick, except at second hand, having cited only once (p. 260) the valuable Transcript of the Manuscript Books and Papers of the Committee of Enquiry, etc. From the foot-notes we gather that the sources principally used are the colonial laws and records, the American Archives, Stevens's Facsimiles, Rivington's Gazetteer, and the letters of Murray and of Curwen. Aside from the colonial laws, which have been carefully analyzed (Appendix B, Appendix C), it does not appear that the author's acquaintance with the sources of his subject is exhaustive or intimate. Citations are not made uniformly, and Rivington's Gazetteer has been cited throughout as "Rivington's Gazette."

The work itself is concerned broadly with two problems, quite different in their nature—the formation of the Loyalist party, and the fortunes of the party after it was once formed. The first five chapters, with the possible exception of chapter iii., have to do with the former, the last eight have to do with the latter. Obviously it is more difficult to trace the origin of a party than it is to relate the fortunes of the party after it is once formed. Mr. Van Tyne has, at any rate, apparently found it so, for he has succeeded in giving us a useful and fairly satisfactory summary of the organization of the Loyalists, of what they did, of how they were treated, and of what became of them; but he has failed to give us a useful or satisfactory account of the transformation of the old colonial parties into the Loyalist and Revolutionary parties. Indeed, from the author's point of view, this transformation was necessary only in respect to the patriot party. "Loyalty was the normal condition, the state that *had* existed, and *did* exist, and it was the Whigs . . . who must do the converting," etc. (p. 2). Consequently the author's task is limited for the most part to an enumeration of the classes which remained loyal.

This, it strikes us, is to miss the core of the whole matter. It is, of course, true that loyalty was the normal condition, but loyalty as a general condition, and loyalism as a specific party policy, are quite different things. In the only sense in which the terms have any significance, there were neither Loyalists nor Revolutionists in 1765; in 1776 there were both. Between these dates the progress of events in England and America was steadily in the direction of defining the issue more and more precisely in terms of revolution vs. loyalism; the problem of the historian is to show how the different factions and parties were gradually disintegrated, and forced to accept the one alternative or the other. The central fact was the existence, as late as 1774, of a large conservative party which favored neither absolute revolution nor submissive loyalism. This party was composed of two elements: those who preferred to resort to forcible resistance rather than to accept absolute submission, and those who preferred absolute submission to forcible resistance. In 1774 and 1775 the Conservative party split in two on these lines: those who were facing toward revolution became revolutionists, those who were facing toward loyalism became loyalists. Both elements acted from essentially the same motive—the necessity of supporting the lesser against the greater evil. This central fact Mr. Van Tyne has apparently missed.

The number of errors of detail suggests a hasty gathering and sifting of material. The proposal which led the Boston leaders to await the action of a Continental Congress (p. 34) was not made by the Sons of Liberty in New York, but by the Committee of Fifty-one. "New York Convention" (p. 64) should be "New York Congress"; "Provincial Congress" (p. 88) should be "Provincial Convention"; while "Provincial Convention" (p. 161) should be "Provincial Congress." It is misleading to say that, in spite of majorities on Long Island "against the measure" (of the Provincial Convention in New York, 1775), delegates were sent by "small bodies of patriots who relied on outside support" (p. 89). This was true only in the case of two towns in Queens County, Jamaica and Oyster Bay, and the delegates from Queens County were refused a vote by the Convention. Four counties, instead of three (p. 116), authorized the New York city delegates to act for them in the first Continental Congress, and this authorization was hardly "careless" (see 4 American Archives, i., 1188). It is hardly correct to say that the Provincial Convention in New York assumed legislative powers (p. 119). Aside from a formal approval of the first Continental Congress, its sole work was the election of delegates to the second Continental Congress.

On the whole, Mr. Van Tyne's book, especially the last part of it, will serve a useful purpose, but we feel that the subject is one which might well justify more careful work and profounder thought than has as yet been given to it. The style is somewhat above the level of "dissertation English." The index is good.

Personal Idealism: Philosophical Essays by Eight Members of the University of Oxford. Edited by Henry Cecil Sturt. Macmillan. 1902. 8vo; pp. 393.

The writer of the opening essay of this volume is one of Oxford's importations of four or five years ago, George Frederick Stout, of St. John's, Cambridge, called to Oxford when his eminence in psychology had become unquestionable. He here undertakes to resolve some of the sophisms of Ward and Bradley, mingling logic and psychology in the manner peculiar to him, until the reader doubts whether Mr. Stout could answer correctly which of these subjects it is that he is dealing with. The second essay is by Ferdinand C. S. Schiller, author of 'The Riddles of the Sphinx,' and it is the liveliest, and, as one would say, the most brilliant, in the book. William Ralph Boyce Gibson discusses the problem of freedom in its relation to psychology. Without astonishing originality or clearness of thought, he presents considerations substantially sound, and so commonly overlooked as to be well worth urging. There is, he says, besides the study of the modern psychologists, another science dealing with Mind as conscious of final causation. This naturally suggests a swarm of questions, some of which Mr. Gibson passes without notice, while some he answers or half-answers. George Edward Underhill's paper on "The Limits of Evolution," which argues that the evolutionist cannot deal with origins and unavoidably assumes the existence of laws not subject to development, may be reckoned as padding. Robert Ranulph Marett treats of "Origin and Validity in Ethics," preaching the clear truth that Validity is the primary principle in this field.

One would expect that students who are moved by the conviction that enough has not been made of personality in philosophy, would anchor their bark on the rock of ethics. Yet of these eight essays, two only are ethical, since Mr. Gibson, though he treats of the problem of freedom, does so in the sole interest of psychology. The succulent paper of the editor, on "Art and Personality," sandwiched for no obvious reason between two dry slices of ethics, will prove, we think, the most useful to philosophy of the whole eight. We shall not insist that the writer shows signal skill in hitting his nail squarely on the head, but he manages, after a fashion, to get a sufficient part of it driven home. At any rate, he certainly brings together a considerable number of items of thought bearing upon the question of æsthetics which it will be highly convenient to have thus collected. We hope to hear more from this new philosopher. Messrs. Boyce Gibson, Marett, and Sturt belong to a class of thinkers whose work we shall value more and more as the day of heroes in philosophy fades away *al ponente*. Dr. Frederick William Bussell considers "The Future of Ethics: Effort or Abstention?" Finally, Rev. Hastings Rashdall, best known for his book on the mediæval universities, attempts to analyze personality, and gives in his adhesion to the limitation of God, as against the absolutism of Bradley and other metaphysicians in vogue.

The tendency vaguely described on the title-page is probably destined to play a prominent rôle in the thought of the twentieth century; but even those who believe that some such view will ultimately be found to approve itself after the oscillations of opinion shall have subsided, can hardly expect this publication to shake opinion as it must some time be shaken if metaphysicians are ever to come to any agreement. Mr. Schiller thinks they never will do so; and, furthermore, that they never ought to. Philosophy, he thinks, ought to be regarded as a matter of personal fancy. "The whole history of philosophy shows that the fit of a man's philosophy is and ought to be as individual as the fit of his clothes, and forms a crushing commentary on the intolerant craving for uniformity. . . . For this reason any philosophy is better than none." That is, one must not go metaphysically naked, like Truth in her well, but whatever opinion one takes a fancy to, will answer every essential purpose. Lutoslawski's master, of unpronounceable name, can hardly more magnify the element of human wilfulness. Nevertheless, the assortment and confrontation of opinions, if carefully studied, may have a fine effect. There is eventually to be a "harmony" of metaphysical systems, though no "uniformity," differences of philosophical belief being "too deeply rooted in human idiosyncrasy to be eradicated." Mr. Schiller does not believe there are any hard facts which remain true independently of what we may think about them. He admits it requires a hard struggle to make *all* facts suit our fancy, but he holds that facts change with every phase of experience, and that there are none which have been "all

along" what history decides they shall have been. This doctrine he imagines is what Professor James means by the "will to believe." He is resolved that it shall have been so.

The main point of the essay, however, is that axioms are explanatory hypotheses—"postulates," the author calls them—which are suggestions coming from our needs, and which, in a measure, are found to fit the facts while in a measure they are forced upon the facts by formalisms. No doubt axioms and explanatory hypotheses may with some justice be thrown together under one heading, but the general theory is considerably more satisfactory than the author's attempts to apply it to the formulæ of logic, such as "A is A," for such a formula is simply an attempt to formulate in part what we perceive that we mean by "is." It thus rather resembles the assertion that a color before the assertor's eyes is red—that is, it resembles a direct judgment of perception; although doubtless this, too, might with some justice be likened to an explanatory hypothesis.

The general movement of thought which the book represents has certainly great vitality; and this signifies that it is destined to develop further. All the writefs have plainly been much impressed by the method of the book, 'Riddles of the Sphinx.' Their bark is not anchored to any special position, and is destined to be carried far—they know not whither. We believe them to be the hardy navigators who will adhere to their method as long as it seems to them rational, wherever it may carry them.

Glimpses of Colonial Society and Life at Princeton College 1766-1773. Philadelphia: Lippincott. 1903.

The town of Paterson in New Jersey most conspicuously commemorates to-day the Governor of that State, afterward a Senator and a Justice of the United States, some of whose correspondence with college friends when he was between twenty-one and twenty-eight has been printed, with the above title, under the editorship of Mr. W. Jay Mills. Not much direct light is thrown upon either society or the College, from which he was graduated in 1763, by this law student, whose letters were chiefly occupied with the charms of real and imaginary belles in Philadelphia and Princeton, and with comments upon the tender passion. In the main they show that a hundred and thirty years ago the emotions were as urgent as they are to-day, with perhaps somewhat more open expression. If William Paterson's letters of the next ten years, covering the Revolutionary period, could be recovered, they should be a contribution to history.

A satire upon a tutor who avoided the civic duty of attendance at an accidental fire; reference to the recognized custom on the part of some students of delivering speeches not their own as if original; and an appended letter from the President in 1804, showing the trouble made by a suspended student who would not leave the town, but "haunted the college particularly at nights," are the chief items bearing upon the academic life. A business letter of 1769 says: "There is very little circulating cash in the country, which renders it difficult to take up money," although in Hunterdon County, whither Paterson is going, there are wealthy farmers who "have money to put." We learn incidentally that postal accommodations are indifferent and irregular. Long trips over country roads are taken as a matter of course and without complaint in attending court. These illustrate the times. There is no allusion to dress, to entertainments, to social habits of any kind. Naturally there would be no set comment, in such informal and ephemeral communications, upon the ways of a society with which both parties were familiar, but it is strange that there was no recognition in them of that ground swell of opinion so soon to be manifest in the war for independence.

It seems a question of ethics whether it is quite right to publish such correspondence. There is nothing unbecoming nor really weak in these pages, but they are friends' gossip, not essays for the world. Historians might study such manuscript for details, but we cannot believe that an ordinarily sensitive man would not object, either at the time or in his maturer years, to having them spread abroad. Although written by one who afterward became conspicuous, they are not the letters of a famous man; so the public has not the claim, sometimes set forth, of a right to the developed thoughts, although privately expressed, of those to whom popular acclamation has given fame. Nevertheless we all like human documents, and as one that is well marked, this little book appeals to a natural if not very elevated longing.

Unless the orthography has been very carefully edited, William Paterson was much more literate than the average collegian of his day. There are but one or two misspelled words, and these are carefully stamped with a *sic*. But with all such apparent care the editor sees fit (p. 141) to spell queue without its last two letters. This is a lapse probably distributable between the compositor and the proofreader, but unsightly.

Social Germany in Luther's Time. E. P. Dutton & Co.

We have here a translation, by Mr. Albert D. Vandam, of the memoirs of Bartholomew Sastrow. The title is decidedly too pretentious, inasmuch as Sastrow was a minor personage, whose experience of the world was limited and whose prejudices were extremely strong. It will be seen, too, that he really belongs not to the time of Luther, but to the following generation. He was born in 1520 and lived till 1603. Thus, while the first twenty-six years of his life run parallel with the last twenty-six of Luther's, he belongs to the age of the Council of Trent rather than to the age of the Diet of Worms.

Our only quarrel is with the undue comprehensiveness of the title. This autobiography is worth translating, both for the facts which it contains and for the state of mind which it reveals. Sastrow was a native of Greifswald, and his career is chiefly associated with the Hanseatic region. The Lutheran movement had made good progress in the extreme north of the empire during Sastrow's boyhood, and when, at the age of eighteen, he entered the University of Rostock, he found it under the control of two apostles from Wittenberg, Burenius and Welfius. From whatever influence, Sastrow imbibed during his boyhood a spirit which led him to defend the Lutheranism of the Lutheran religion. His party feeling shows itself strongly in his autobiography, and is indeed one of the main characteristics of the work. As Mr. H. A. L. Fisher observes in his introduction to the present translation:

"Sastrow was a Lutheran and believed in devils as fervently as his great master. . . . For some reason, which to me is inscrutable, but which was as plain as sunlight to Sastrow, a superhuman apparition goes out of its way to help a young Pomeranian scribe, who upon his own showing is anything but a saint, while the innocent maidservant of a miser is blown up with six other persons no less blameless than herself, to enforce the desirability of being free with one's money. This, however, is the usual way in which an egoist digests the popular religion."

At the age of twenty-four Sastrow became an imperial notary, and for historical purposes the most important part of his life falls within the next six years. After serving the Margrave Ernest of Baden and Christopher von Löwenstein, a receiver of the Order of St. John, he journeyed to Italy in 1546, had a glimpse of Rome (where his Lutheranism was carefully concealed), and returned to Germany before the outbreak of the Schmalkaldic War. Unfortunately for itself, Pomerania took the side of the confederates, and, after the battle of Mühlberg, found it necessary to sue for terms. Sastrow received an appointment on the commission which went to Augsburg along with the Pomeranian Chancellor, James Citzewitz. His account of the Diet at which the Interim was drafted is quite the best thing in his narrative of personal experiences, and it alone would justify the publication of the book. The profligacy of the German princes, the cruelty of the Spanish soldiery, and the hideous frequency of judicial murders, throw a lurid light upon the theological debates of this exciting moment. Though not a dignitary of anything like the highest importance, Sastrow stood near enough to the Protestant princes to procure much information and more gossip. During the latter part of his life he was occupied chiefly with the politics of Stralsund. After being made Secretary in 1555 and Councillor in 1562, he reached the post of Burgomaster in 1578. This was the highest position he ever filled. His personality is harsh and unpleasant. His book reflects the more rugged aspects of German life during the middle and latter part of the sixteenth century.

BOOKS OF SERIOUS INTEREST

The Autobiography of Joseph Le Conte

These charming reminiscences were written in the midst of the scenes in which the events that he has narrated occurred, surrounded by his children, grand-children, and great grand-children, for whom the manuscript was intended, and to whom, from time to time, portions of it were read. What was originally intended as a sketch, became a detailed autobiography. Fortunately the account was brought down to a few months before Professor Le Conte's death, and it concludes with a statement of what he himself considered of most value in his life.

With portrait. 12mo. Cloth, $1.25 net; postage additional.

The Story of a Grain of Wheat

By WILLIAM C. EDGAR

Editor of "The Northwestern Miller."

A clear, concise statement of the practical information that any one may need, whether interested in the cultivation of the grain itself, the manufacture of flour, or the consideration of the subject from an economic standpoint.

Forty illustrations. Cloth, $1.00 net; postage, 10 cents additional.

Second Edition in Press during the week of first publication.

Musical Education

By ALBERT LAVIGNAC

Professor of Harmony at the Paris Conservatoire

Translated from the French by ESTHER SINGLETON, translator of Lavignac's "Music Dramas of Richard Wagner," and author of "Social New York Under the Georges," etc.

12mo, cloth, $2.00 net; postage additional.

More Letters of Charles Darwin

EDITED BY FRANCIS DARWIN

Two volumes, 500 pages each. Eight photogravures and eight half-tones. Cloth, gilt top, deckle edges, boxed, $5.00 net.

Stockton's Last Novel

The Captain's Toll-Gate

COMPLETED BY HIM DURING THE YEAR BEFORE HIS DEATH

With a Memoir by Mrs. Stockton, an Etched Portrait, Views of Mr. Stockton's Homes and a Bibliography. 12mo, cloth, $1.50.
SPECIAL LARGE PAPER EDITION. Signed artist-proof etching, Mr. Stockton's autograph attached, Memoir, autographed by Mrs. Stockton, etc. Sale limited to 150 copies, and the edition largely sold before publication. A few copies left; boxed, $5.00.

READY JUNE 26

Love-Letters of Margaret Fuller

1845-1846

With an Introduction by JULIA WARD HOWE

To which are added the Reminiscences of Ralph Waldo Emerson, Horace Greeley, and Charles T. Congdon.

"These are genuine letters, written by the Sibyl of New England transcendentalists They reveal purity of thought, beauty of sentiment, sweetness of nature, and exquisite refinement of style. They were written out of a full heart and mind, and fairly pulsate with womanly tenderness and sensitiveness."—*From a column and a half letter about this book written by Isaac N. Ford, the London correspondent of The New York Tribune, under date of April 8, 1903.*

12mo. Cloth, gilt top, uncut edges, $1.35 net.

WANTED—September 1st—For permanent position, competent experienced woman bookkeeper, able to assume full responsibility. College graduate preferred. Apply immediately Bursar's Office, Bryn Mawr College, Bryn Mawr, Pennsylvania.

CHEMIST, Ph.D. (Goettingen), desires a professorship in a College or University. Seven years' experience. Good references. Address "Mal," care *Nation.*

The Quaker: a Study in Costume

King Charles I. of England wore Quaker costume when posing for the well-known portrait by Vandyke. The beautiful Miss Fitzgerald, lady-in-waiting to Queen Caroline, also wore garments of Quaker cut. In both cases the Quaker element entered after the event, i.e., styles once worldly became Quaker by adoption.

The origins and transmutations of Quaker costume are entertainingly explained and freely pictured in this beautiful volume by AMELIA M. GUMMERE. 8vo, half ooze-sheep, 240 pages, 75 illustrations, $3.00.

FERRIS & LEACH, PUBLISHERS, Nos. 29-31 North Seventh Street, PHILADELPHIA

JUST ISSUED

Dodge's General Zoölogy.

By C. WRIGHT DODGE, M.S.,
Professor of Biology in the University of Rochester.

Cloth, 12mo, 512 pages, with 378 Illustrations.
Price, $1.80.

This book presents the established facts and principles of Zoölogy clearly, and in a manner different from that of other manuals. The order of parts has been reversed, and the whole introduced with a new part consisting of a course in Practical Zoölogy. The second part contains a systematic treatment of the animal kingdom. The comparative study of the organs and functions of animals forms the third section. The book fully meets the needs of those teachers who wish to follow the modern methods of laboratory and field instruction

AN EDUCATIONAL DIRECTORY

I.—The NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in the NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States alphabetically, unless especially ordered displayed.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The NATION is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

LONGMANS, GREEN, & CO.'S NEW BOOKS

DISSERTATIONS ON LEADING PHILOSOPHICAL TOPICS

(mainly Reprints from "Mind")

By ALEXANDER BAIN, LL.D., Emeritus Professor of Logic, University of Aberdeen. 8vo, pp. viii–277. $2.50 *net*. By mail, $2.64.

CONTENTS: The meaning of "Existence" and Descartes' "Cogito"—On Moral Causation—Mill's Theory of the Syllogism—Association Controversies—On Some Points in Ethics—Is There Such a Thing as Pure Malevolence? (Mr. BRADLEY)—Is There Such a Thing as Pure Malevolence? Reply to Mr. BRADLEY'S Objections—Definition and Demarcation of the Subject Sciences—The Empiricist Position—Physiological Expression in Psychology—Pleasure and Pain—Definition and Problems of Consciousness—The Respective Spheres and Mutual Helps of Introspection and Psycho-Physical Experiment in Psychology—The Scope of Anthropology and its Relation to the Science of Mind—On the Pressure of Examinations.

SOCIAL ORIGINS and PRIMAL LAW

By ANDREW LANG, M.A., LL.D. By J. J. ATKINSON. 8vo, pp. xviii-312. $3.60 *net*. By mail, $3.80.

Mr. ATKINSON'S work deals with his theories as to the origins of human society, and especially as to the marriage relation. These are based on his knowledge of the natives of New Caledonia, among whom he spent nearly the whole of his life. Mr. LANG has edited this part of the book, and his own part of it is of the nature of introduction and commentary.

THE INDIA OF THE QUEEN, AND OTHER ESSAYS

By the late Sir WILLIAM WILSON HUNTER, K.C.S.I., C.I.E., LL.D., etc. Edited by Lady Hunter. With an introduction by Francis Henry Skrine, Indian Civil Service (Retired). 8vo, pp. xviii-277. $3.00 *net*. By mail, $3.14.

*** Uniform with the "Life of Sir William Hunter."

THE BIBLE IN THE NINETEENTH CENTURY.

Eight Lectures. By J. ESTLIN CARPENTER, M.A. 8vo, pp. xvi-512. $3.50 *net*. By mail, $3.68.

This book originated in a course of lectures delivered in various towns in England, Scotland, and Wales during the years 1900-1903. Their object was to awaken the interest of Christians of all churches in the modern study of the sacred books of their religion, by sketching the history of the processes of investigation, and indicating some of the results which have been so far attained.

CONTENTS: Lecture I. The Struggle for Freedom of Inquiry—Lecture II. The Revised Version—Lecture III. Changed Views of the Law—Lecture IV. Changed Views of Prophecy—Lecture V. The Gospels and the Early History of Christianity—Lecture VI. The First Three Gospels—Lecture VII. The Fourth Gospel—Lecture VIII. The Bible and the Church.

REUNION ESSAYS

By the Rev. W. R. CARSON, Author of "A Eucharistic Eirenicon." Crown 8vo, pp. 258. $2.50.

CONTENTS: The Evolution of Catholicism—A Moderate View of Papal Infallibility—The Social Aspect of Confession—The Kenosis of Christ—The Kenosis of the Church—The Maternity of God—The Personal Factor in Religious Belief—Anglican Concessions on the Invocation of the Saints—The *Rationale* of Saint Worship. Appendix on the Non-Infallible Dogmatic Force of the Bull *Apostolicæ Curæ* of Pope LEO XIII. Condemning the Validity of the Holy Orders of the Church of England.

THE LAND OF THE BOXERS:

or, China Under the Allies

By Captain GORDON CASSERLY, Indian Army. With 15 Illustrations and a plan. 8vo. $4.00.

"An extremely entertaining and valuable book. Captain Casserly's narrative is picturesque and graphic. It gives a clear and concise account of the principal military operations during the campaign."—*Daily News* (London).

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

MODERN CIVIC ART

The City Made Beautiful

By CHARLES MULFORD ROBINSON, author of "Improvement of Towns and Cities," etc. 8vo, net $2.50. (Postage 20c.)

In his latest work, Mr. Robinson, whom certain English critics hailed as the new Ruskin in their reviews of his earlier book, treats of the artistic side of that civic renaissance which is now sweeping over the civilized world in a popular effort to bring beauty into cities. Philosophical reflection and historical survey, added to artistic criticism and suggestion in the presentation of the subject, make the work very attractive, while at the same time it is thoroughly practical.

G. P. Putnam's Sons, NEW YORK AND LONDON.

Wesley and His Preachers

By G. HOLDEN PIKE

Author of "Oliver Cromwell and His Times." Lavishly illustrated with reproductions from paintings and old prints, particularly rich in portraits. Deals specifically with the conquest of Britain by Wesley and his immediate followers.

Cloth, $1.75 net.

REMINGTON *Standard Typewriter*

327 BROADWAY, NEW YORK

The Nation.

NEW YORK, THURSDAY, JUNE 11, 1903.

The Week.

"A square deal" for the negro was the burden of President Roosevelt's speech on Thursday at the tomb of Abraham Lincoln. Inspiration might well have come to him from that mighty shade. And thickening events are certainly hurrying on the issue. The new slave-driving in Alabama has pricked the conscience of the nation. Highly significant, in this connection, is that plank of Thursday's Ohio platform which declares for "equity everywhere in the exercise of the elective franchise," with the enforcement of the Constitutional penalties upon those States which violate it. This is one form of the "square deal" for the negro to which it is the nation's immediate business to attend. The Ohio utterance marks the revival of human rights, with the equality of all men before the law, as a political issue of the first magnitude. It may easily swallow all other issues. Education and the suffrage lie at the foundation of our institutions, and we must work for both.

Just why the South should feel so bitter against President Roosevelt for appointing to office fifteen or sixteen negroes, when Mr. McKinley gave office to eighty without being complained of, has puzzled every Northern observer of the fierce criticisms of the President. Until now we have looked in vain for an explanation, but Mr. John J. Vertrees of Nashville has risen to the situation in an article in the June number of the *Olympian*. With the Jove-like wisdom called for by such a forum he informs the public that

> "Mr. McKinley appointed negroes to office because they were negroes—thus making, as all perceived, a mere political play, which was accepted as a matter of course, and, therefore, gave no concern. But Mr. Roosevelt appoints regardless of race, and because negroes are equal men—thus revealing a faith in that solidarity which Anglo-Saxons know can come only through the mongrelizing of their race. This is the reason why the negro looks to the President as a deliverer, and the people of the South turn from him as one recreant and irresponsive to the instincts and appeals of his own blood and race."

This is extremely enlightening, so much so as to call forth the highest praise from the Nashville *American*, which declares that Mr. Vertrees "has admirably given expression to the Southern sentiment on the negro question." We had supposed that the opposition to Dr. Crum in Charleston was based upon his color alone. We see now that if Mr. Roosevelt had sent Dr. Crum's nomination to the Senate in this form, "Dr. Crum, negro, unequal man, nominated for political purposes only," all that rumpus in Charleston would have been avoided, and he would not have been accused of wishing to prevent race suicide by "mongrelizing the race."

President Roosevelt returned to Washington on Friday evening, just in time to learn of the indictment of August W. Machen, the former General Superintendent of Free Delivery, and of the arrest of two of his subordinates, T. W. McGregor and C. Elsworth Upton, on the charge of swindling the Government on a mail-pouch contract. On an $18,000 transaction they are said to have placed $10,000 to their private bank accounts, which would be considered a handsome profit even in Wall Street. The seriousness of the situation is now so clearly recognized that a prominent official is quoted in the *Tribune* as declaring that the bribe givers and bribe takers must be made examples of if the corrupting influences of the postal ring are not to permeate every branch of the Government service. Here is Mr. Roosevelt's chance, and he has improved it by causing it to be announced that he is determined to pursue the post-office thieves relentlessly. His friends say that he has given orders to "go to the bottom." We hope they will be obeyed, and that the investigation will also go to the top.

The postal investigations have now dragged into the light of publicity the name of the Postmaster-General's own secretary. Mr. Payne is, of course, certain that nothing will be found which will in any way reflect upon his immediate subordinate, whom he has known for many years. It will be remembered that he was also of the opinion that Mr. Tulloch's hitherto unrefuted charges were merely "hot air," and that there was nothing in the entire investigation. His secretary, it appears, is vice-president of a copper mining company, of which Mr. Machen, now under indictment, was president. Mr. Machen was also interested in a coal company which furnished fuel to the Post-Office Department. Indeed, it seems to have been the custom for postal officials to have all sorts of outside connections and associations, some of which were obviously formed for the purpose of doing business with the Government. An investigation of this practice would undoubtedly throw much light upon the pervading low moral tone of Washington officialism. The evil is not unknown in other departments, but has apparently spread further in Mr. Payne's than elsewhere.

The Ohio Republican platform favors "every encouragement possible to our merchant marine in the extension of American commerce in American ships upon every sea." This is a tame and spiritless indorsement of the ship-subsidy scheme. Rather should it be esteemed no indorsement at all. The Hanna-Payne bill and the later Frye bill constitute the only measure by which the Ohio Senator has been signalized as a statesman during his six years' service. All his other distinction has consisted in the lavish use of Federal spoil to provide places for his own henchmen and to seduce those of his rivals in Ohio. When we find him unable to get any serious indorsement of his ship-subsidy scheme, we may safely conclude that he is not taken seriously as a legislator even by his own State. The resolution adopted by his Convention on the subject of the merchant marine may perhaps include the Elkins plan of discriminating duties in favor of American ships; but if it had meant the Hanna bill, or the later Frye bill, it would have named either the one or the other of those measures. Mr. Hanna is not the only statesman who is "short" of an indorsement in this particular. General Grosvenor was in an even more necessitous plight; but naturally the Ohio Republicans did not want to see Grosvenor's check from J. Pierpont Morgan circulated as a campaign document this year.

On the subject of the tariff, the Ohio platform appears to be decisive and unequivocal, but in reality it is not so. It first says that the protective tariff "has made the United States the greatest industrial nation." This is a glaring untruth, since it ascribes to the tariff all the prosperity due to natural resources and abundant harvests—as glaring as it would be for the other side to affirm that the high protective tariff is connected with the high barometric pressure which has prevented rain in the North Atlantic States, causing the drought and forest fires we have just been witnessing. But, after claiming all the prosperity as the work of protection, and leaving all adverse conditions to be accounted for by Divine Providence, the platform-makers suddenly remembered that there was a national convention of millers in session at Detroit whose theme was reciprocity with Canada; also, that there were important groups in other parts of the country, such as tanners, shoemakers, and the manufacturers of agricultural implements, making similar demands with respect to foreign trade. So the platform-makers took a short excursion into the free-trade domain by referring to "changing conditions and the possible benefits of reciprocity," and to a "timely readjustment of schedules." The

Boston Home Market Club may be trusted to deal as they deserve with these turncoats and traitors.

We have received from our readers sundry circulars, or packages of circulars, sent out as campaign literature by the American Protective Tariff League, upon which we are asked to give some advice or suggestion in the way of reply. The circular is a small slip of paper asking the receiver of it to send to the League the name and address of one person who will cast his first Presidential vote in 1904. "We wish," it says, "to forward to him literature on the subject of protection." Our advice to the receivers of these slips is to ask the senders simply to define the word protection in terms of the Dingley tariff; that is, to take the separate items of the tariff, and tell what the ad-valorem rate of duty is, and to say whether that rate is necessary for the purposes of protection, and if not, what rate would be necessary. Thus, we understand that the rates of duty on mica, or some varieties of it, are equal to 4000 per cent. ad valorem. The range of the Dingley tariff includes all kinds of percentages, from that figure down to 5 or 10 per cent., and to the free list. It includes a duty of 33 per cent. on wheat, which the millers would like to have removed because they say that it cripples our milling industry by compelling the exportation of Canadian wheat to England, where it is ground into flour. If we could take that wheat and grind it, we could employ a corresponding amount of American labor and make a corresponding profit. Other persons say that the duty on hides is non-protective, but is a damage to the American tanning industry and to all leather manufactures; that it gives to foreigners an advantage over us in the boot and shoe trade. We should like to know, also, whether the duty on works of art is for protection or for revenue. American artists say that they do not want it for the former, and the Secretary of the Treasury certainly does not want it for the latter purpose. He has more revenue now than he knows what to do with. There are many questions of this kind which Mr. W. F. Wakeman, Treasurer and General Secretary of the American Protective Tariff League, might employ his well-earned leisure in answering.

The framers of the Constitution of Illinois fixed a special day for the election of Circuit and Superior Court judges, the idea being that, by separating the election of judges from all other political issues, a result not based upon party intrigue and manipulation would be sure to follow. This praiseworthy end has not been actually reached, of course, but the judicial election which has just taken place in Chicago indicates that substantial progress has been made. Lorimer, the Republican boss, insisted upon the nomination of certain candidates who would never have been heard of except for their political "pull," and as a result they were disastrously beaten. On the other hand, two Democratic candidates ran, even in the Republican wards, far ahead of the machine candidates. A curious and suggestive feature was that the most obnoxious of the Lorimer candidates, Hanecy, received strong Democratic support in some of the lower districts. Evidently there is such a thing as non-partisanship for evil as well as for good. The result would have been almost entirely satisfactory but for the fact that the vote was very light.

None of the customary excuses is available to explain the lynching of a negro by a mob of 2,000 persons near Belleville, Ill., on Saturday night. Illinois is a Northern State; the crime of which the mob's victim was accused was not committed against a woman. The negro was in jail, charged with attempting to kill one of the county officials. The man was not dead; in fact he may recover. There was no reason why the prosecution of his assailant should not have followed the ordinary course—or only one reason. The prisoner was a negro. On this account he was set upon in his cell and almost beaten to death, then dragged into the street in a dying condition, hanged to a telegraph pole, his body cut with knives and riddled with bullets, and finally burned. The apologists for the lawless band which committed this outrage declare that it was necessary to teach the negroes of the vicinity a lesson. Doubtless by their action they have taught one, but not as they intended. The lesson of violence is violence.

Even at the risk of prolonging the strike in the building trades, the employers have done well to formulate a comprehensive plan for dealing with the various unions. In general, while it amply "recognizes" the labor organizations, it recognizes them as bodies of workmen, not dictators, and lays down rules under which their arbitrary and vexatious methods will be hedged about. In particular, the scheme proposes to eliminate that most noxious disturber of the peace in the world of labor—the walking delegate. He will hereafter have to walk out, if the employing builders have their way. Their decided stand is one sign more of the growing realization that the demands of organized labor have become wildly excessive. In Chicago, labor has apparently gone crazy. Barbers, waiters, cooks, laundrymen on strike, threaten to leave the city unshorn, unfed, and unwashed. Mr. Marshall Field, whose record as a large and generous employer of labor is well known, speaks a manly word when he tells the unions that their course will speedily bring all employment to an end. If a business is to be ruined, it might as well be by discontinuance as by being forced into bankruptcy through paying impossible wages.

The arrest on Monday of Samuel J. Parks, the walking delegate, on the charge of extortion, may have an important influence in the way of settling the pending strike in the building trades. At all events, it will give both sides much to think about. It has been known here and everywhere that power was lodged in the hands of the walking delegate to upset business calculations involving millions of dollars, to carry ruin or penury into the homes of thousands of men, both employers and employees, and that the persons holding such power were for the most part irresponsible, or accountable only to their immediate constituents. The system, too, lends itself easily to corrupt practices. Given the power by the mere blowing of a whistle to close a factory and perhaps to ruin its proprietor, without the chance of being called to account in any tribunal which the whistler fears, it requires an unusual stock of virtue on his part to refrain from turning it to account for purposes of private gain. Why do employers allow themselves to be blackmailed? it may be asked. Why did not the President of the Hecla Iron Works take a firm stand and refuse to pay Parks a cent for lifting the strike? Is the briber not as bad as the bribed? But this is not a case of ordinary bribery. It is more like being "held up" on the high road and ordered to deliver one's purse at the pistol's muzzle. But whatever may be said of the hardship of the position in which many an employer finds himself, he is strictly bound in the interest of society and good government, to bring the blackmailer to justice at the first opportunity. Such an opportunity has come, and it is fortunate for the community, and especially for the honest trades-union men—and the great majority of them are honest—that we have a District Attorney in whom both employers and employed have full confidence.

The thirteenth of June is to be an important date in the history of the American college. On that day the democratic system of government by the entire body of the professors, which has marked out the University of Virginia from almost all other institutions of learning in the country, is to come to an end. This system, in spite of all that can properly be said on the other side, has good features which it is a pity to see extinguished. But however one may be inclined to decide on its general merits the question of president or temporary chairman, the coming election on the

part of the Board of Visitors (appointees of the Governor) is fraught with great danger; for, incredible as it may seem in the case of an institution of such distinction and dignity as the University of Virginia, there is grave fear that the election may be carried upon political grounds, and that a candidate who has no fitness for the position—who is not even a college graduate—will be the choice of the electors, even in the face of the organized protests of the professors themselves. So sad a fate as this, it is to be hoped, is not in store for an institution which has so brilliant a history behind it.

With two such veterans as Sir Michael Hicks-Beach and Sir William Vernon Harcourt ready to take the field for free trade, in the Conservative and Liberal parties respectively, no immediate revolution in British fiscal policy is possible. As we go to press, the House is in the midst of a great debate of which the issue appears to be a parting with Chamberlain or with the reins of power. With Chamberlain dropped, Mr. Balfour still has a "fine brute majority," and, by staving off other troublesome issues, by throwing oveaboard unpopular bills like that for London education, and by coddling the Irish, may retain his office for some time to come. But there can be no doubt that he has been fatally discredited as a party leader. What Prime Minister has ever had to suffer such a faithful wound of a friend as that inflicted upon Mr. Balfour by one of his supporters in the press, the *St. James's Gazette?* Speaking of the way in which the Premier had abandoned the essential clauses of the London Education bill, it said:

> "If Mr. Balfour would take the pains to think his policy out beforehand, base it on firm principles, and then say to his followers that the Ministry intended to stand or fall by their proposals, he would be much more loyally supported than he is at present. His constant attempts to catch gusts of acquiescence first in one quarter and then in another simply offer a premium on discipline and dissension in the ranks."

Such language is one of the symptoms of coming storm.

Mr. Chamberlain has written a letter for the instruction of British workingmen on the subject of the bread tax. He follows in the footsteps of William McKinley, as the latter did in those of Lord George Bentinck and the other tariffites of sixty years ago. He says that it is a matter of opinion whether the cost of living will be increased by a duty on wheat or not. He considers it "established" that the recent duty of one shilling per quarter on that cereal was met by a reduction in prices and in freight rates in the United States, and therefore did not fall on British consumers. A more intimate acquaintance with the facts would have taught the Colonial Secretary that the British duty on grain, imposed at the instance of Sir Michael Hicks-Beach, coincided in point of time with the opening of lake navigation, and that the railroads reduced their rates accordingly, as is their custom. The British tax did not enter into their reckoning at all. But, says Mr. Chamberlain, "even if the price of food is raised, the rate of wages will certainly rise in greater proportion." This signifies that employers will embrace the opportunity afforded by a rise in the price of bread to add a corresponding sum, or rather a greater one, to their own expenses for labor. Workingmen know better than that. They know that employers will pay what they have to pay and no more. They know that, except in rare instances, they get their wages raised only by strikes or by demands which carry the threat of strikes to the mind of the employer. The only cases where wages rise by gentler means are those where the demand for labor exceeds the supply. Mr. Chamberlain's logic is at fault in not showing how an increase in the price of food tends *per se* to increase wages.

Australia appears to be willing to meet Mr. Chamberlain's tariff proposals by the ingenious device of raising the duties on goods imported from other countries than Great Britain, but keeping the duties on British goods where they now stand—that is, at a prohibitive or highly protective figure. This they style a preferential tariff. That the only real preference in it is the one given to their own protected manufacturers has been proved, as regards Canada, by Mr. Harold Cox of the Cobden Club. Canada began to give to Great Britain a preference in import duties in 1897. This preference was first fixed at 12½ per cent., and was increased to 33 per cent. in 1900. Apparently however, the rate of duties still remaining was sufficient for all purposes of protecting the Canadian manufacturer. At all events, the proportion of imports from Great Britain did not increase. That proportion was 19 per cent in 1897. It fell to 16 per cent. in 1898, and has continued at that rate except for one year, when it was as low as 15 per cent. Imports from the United States increased from 49 per cent. of the whole in 1897 to 60 per cent. in 1901. This result is ascribed by Mr. Cox to the fact that the tariff was contrived in the first instance to protect the Canadian manufacturer against the British, and that this design has never been lost sight of. He points also to the fact that, before giving a preference to British goods, the Laurier Ministry was careful to raise the duties on cotton goods largely coming from Great Britain, so that the reduction should be neutralized beforehand.

Reduction of military expenditures in the colonies is a question of the day in France. In 1902, the military budget for the colonies was $19,000,000. This year it has fallen to $18,000,000, with some resultant alarm. The *Temps*, which says it "will not be suspected of an excessive weakness for that sort of expenditure," still enters a strong plea for colonial defense. After Fashoda, the Parliament voted an appropriation for a comprehensive plan of colonial defense, but it has been clipped and curtailed, under the pressure for economy. The French colonial system falls into four great divisions: Western Africa, the Congo, Madagascar, and Indo-China. At the present time they are garrisoned by 54,500 troops, 25,000 in Indo-China, 15,000 in Madagascar, and 8,000 on the African continent. The *Temps* insists that they should be so thoroughly armed and equipped that, in a crisis, each portion of the colonial system would be capable of defending itself. This would certainly swell, instead of reducing, the annual budget, the dimensions of which, as they are, give the Minister of Finance sleepless nights.

The reported Belgian decision not to annex the Congo Free State will arouse fresh interest in that unfortunate country. Popular opposition and the attitude of England are the reasons given. To these might well be added the international disgust at the results of Belgian stewardship as they are daily finding their way into print. Mr. H. R. Fox Bourne has just pointed out, in his book entitled 'Civilization in Congoland,' that the original objects of the State, freedom of trade and the protection of the natives, have been absolutely lost sight of. The inhabitants have been reduced to a lower grade of civilization than that of the Arabs, and flee from their homes at the approach of Belgian troops, while the enormous profits of the privileged companies must make the mouths of our own would-be exploiters of the Philippines fairly water. It may be that annexation by Belgium would have fixed the responsibility for conditions in the Free State so clearly that there must have been an improvement in governmental conditions. But the attempt to suppress all recent criticisms, and the general Belgian indifference towards all complaints, are additional evidence of the great evils of the Belgian administration. The sacred task of uplifting an inferior race has in this case plainly pulled down the alleged superior one. There should now be a prompt reassembling of the Powers which took part in the Berlin and Brussels conferences to consider the whole question of the Congo State and, if possible, to set right its existing wrongs. At least, might not a commission be constituted to report upon the actual state of things?

REMEDIES FOR OPPRESSION.

The past few weeks have brought successive appeals to the heart and conscience of the civilized world. One horror of cruelty has followed hard upon another. Scarcely had the atrocities in the Congo Free State forced their way through official concealment to public notice, when the brutal outrages upon the Jews of Bessarabia shocked every reader of the dispatches. Next came the revelations of the hardships and oppression from which Italian laborers in this country were made to suffer, and finally, through indictment by a Federal grand jury, the discovery that a system of slavery, or something really worse than slavery, was practised in several counties of Alabama. We might make our own the prophet's words: "He looked for judgment, but behold oppression; for righteousness, but behold a cry."

Now we are not so dull as to deny that a quickened moral sensitiveness is implied in the very attention and excitement which such occurrences to-day arouse in all Christendom. It is not all a febrile sensationalism—"the festering news we half despise yet scramble for no less." A genuine revulsion against brutality and barbarism can be detected in the outcries which have made themselves heard. It has, happily, come to be true that no crime against humanity can any longer be done in a corner. Even the habitations of cruelty are now within the electric circuit of the world's sympathy. No trampler of the weak, no scourger of the defenceless, no destroyer of liberty can anywhere on this earth now feel safe from at least exposure. International as well as national moral standards have been erected, as regards the primary humane sentiments, and the punishment of the contempt of his kind is assured to man or monarch that dares cross them. Browning's "Instans Tyrannus" is truer than ever to-day, when it is not the victim, but the oppressor, who has reason to be afraid, so sure and ready is the moral condemnation which waits for him.

In this broader and tenderer humanity, with its accompanying vigilance, every one must see the chief hope. The first remedy for oppression is in its acute perception. The day has gone by when we can be accused of "meddling" for feeling and expressing responsibility for cruelty in any part of the world. We are all our brother's keepers, whether he be a Russian Jew in the flames and blood of Kishenev, or a black man tortured on the shores of Lake Leopold or held to slavery on the banks of the Coosa. But all this, it is evident, relates mainly to the attitude of the sympathizer with the oppressed. The further question arises, how is he to make his sympathy effective? What weapons is he to put in the hands of the poor victim of man's inhumanity, which will enable him, once rescued, to become his own defender?

It is when we ask and really try to answer such questions that we, who live in a democracy, are forced to see that the ultimate remedy for oppression must be political as well as moral. In order to set the poor and the wronged upon their feet, we must give them a certain power, even make them formidable, when they are once erect. It is all very well to talk about the mute but irresistible appeal of the unfortunate, but when it is a question of a change of public sentiment and of public law, it is necessary to give the unfortunate the means of enforcing his appeal. Under our system, such means must be, in the long run, political. Until you have a force which can make or unmake Legislatures and Congresses, you have no force able to entrench justice in the law of the land, and to arm its ministers with a sword against all oppressors.

But why stick in the bark of generalities when we have concrete examples under our eyes? Take the case of the outflow of American sympathies and alms to the beleaguered and massacred Jews in Russia. Was it wholly due to pure humanity? Were all our motives altruistic? Look at the facts. The Hebrew population of this country has become a great power. It is a political element with which our public men have to reckon. That is one great reason, beyond the shadow of a doubt, why they so promptly answer, when the appeal is made to them in the name of the persecuted Russian Jew, "Here are we." It is the powerful American Jew who commands; and we may be sure that we should not see so many elected officials, and politicians with an eye to the future, make haste to obey, if they did not know that Hebrew votes would back up the Hebrew cry for justice.

In a similar, though in as yet a less degree, the Italian-born citizens of our country are coming to have a political power which is the best safeguard of their race from oppression. The *Bollettino della Sera* of this city last week drove home the argument. The fashion of the day, it said, was pro-Jewish, but what about the cruelties committed upon Italians in West Virginia? But scarcely had it spoken when the Governor of West Virginia was rousing himself to punish the lawless contractors. The impulse came from New York city, where the Italian vote is no longer negligible. It is an old story. He who has the power of a freeman can make the rights of a freeman respected. Take from the colored men the right of saying, by their suffrage, who shall be their law-makers, and what laws shall be made, and you instantly expose them to what we now see going on in the South --exclusion from office, statutes cunningly devised to their hurt, injustice without redress, and a systematic reduction of the more ignorant and friendless to a condition more terrible than slavery. Pile your moral and educational remedies for such evils as high as you please, you will not be really efficient until you make use of the remedy which the history of this country and the nature of our government show to be the only one that is compelling and complete—the political remedy.

THE QUESTION OF THE BIRTH-RATE.

In the June number of the *Popular Science Monthly* Dr. Geo. J. Engelmann of Boston discusses the question whether the male graduates of American colleges are disinclined to marry and rear children. If it should appear that the higher education tends to "race suicide," that would be a grave indictment, but Dr. Engelmann does not find it sustained by statistics within his reach. He does find, however, that the native American population is declining, but that college graduates are above the average of the native stock in fecundity. The average graduate family does not reproduce itself—does not on the average bring to maturity two new lives to take the places of the parents—but it comes nearer to that mark than the less highly educated family of the native American stock. Dr. Engelmann affirms that the conditions now existing among the American people in this particular are more extreme than those found in any other country, not excepting France.

This is a serious statement. Dr. Engelmann furnishes the data on which he bases his calculations, and first those which relate to marriage. According to the statistics available (the records of all the college classes within reach), the married male graduates range from 88.7 per cent. (highest) to 71.4 per cent. (lowest), the average of all being 75.4. The average of the native American male is only 68.8. That of the population at large, native and foreign-born together, is 79.02. The average rate of fecundity of the native American family is 2.7, but the perils of infancy take away a certain proportion, so that the surviving rate is only 1.9—not sufficient for replacement. Ten families, according to this showing, bring to maturity only nineteen children for twenty parents. Among the native American population of Massachusetts, the highest possible number of survivors is 192 for 200 parents. The births in Massachusetts, native and foreign, are 28 per thousand per year of living population, but among the native-born they are only 17, while among the foreign-born they are 52. The birth-rate of France is 22.4 per thousand, which keeps the population about stationary.

Dr. Engelmann takes a glance backward. He finds that in the time of Benjamin Franklin the average number of

children to a family was 8 (but he omits to abate this figure by the notoriously greater infant mortality). In 1880 it was 6.1; in 1830, 4.6; in 1860, 3.33; in 1872, 2.45; in 1900, among the upper classes of Boston, 1.8. Dr. Engelmann tells us that the birth-rate has been decreasing throughout the civilized world —slowly in the Old World, but with great rapidity in the new. If his facts can be depended upon, they call for some fresh observations on the doctrine of Malthus. This doctrine affirms that "population tends to increase faster than subsistence," and that this tendency will produce misery and operate as a bar to social progress and improvement unless offset by certain checks, such as war, pestilence, and famine, which kill off surplus population, or vice, which tends to lessen reproduction, or prudence, which refrains from bringing into the world more children than can be supported in comfort. Malthus started with the thesis that population increases in a geometrical ratio, while subsistence increases only in an arithmetical ratio. He found good reason to drop his mathematical formulas, but he never contemplated a world in which the fecundity of the human race should diminish in the face of increasing means of subsistence. Yet that is the nut which Dr. Engelmann asks us to crack. He cracks it himself in the following way:

"Family shrinkage seems clearly referable to the strenuous nerve-racking life of the day, to the struggle not for existence, but for a luxurious existence, to the ever-increasing desire for the luxuries of life and the morbid craving for social dissipations and advancement. It is due, as plainly expressed and openly advocated by many, to the desire to have no children, or only such a number as husband and wife believe, in their wisdom, suitable and adapted to their ideals of comfort and their supposed financial possibilities."

That a race which does not keep its own numbers good from generation to generation will pass out of existence, needs no proof, and this will be its appropriate punishment; but the process is, with us, so complicated with immigration that it has no terror for the guilty parties. They say that the foreign stock is merging with the native stock now as before, that the process will continue during the next hundred years, as it has during the past four hundred, and that the last thing to be dreaded is any shortage of population. They think, too, that a lessened birth-rate, or even a decline of the total population, is not an unmixed evil, since it is better that two children should be reared in comfort and with full stomachs rather than eight or ten in squalor and half fed. Malthus, Mill, and Cairnes can supply all the arguments needed under this head, although none of them, as we have said, ever imagined a population declining in number with an increasing food supply. They did not, perhaps, give sufficient weight to the fact that the means of subsistence is a relative term, varying from age to age, and having different meanings to different peoples.

Obviously the delinquents in this case are not amenable to exhortation. They cannot be brought together and lectured. They are not open to appeals on the score of patriotism. They cannot be shamed. It is no use telling them that a people who cannot bring to maturity an average of more than nineteen children to twenty parents ought not to think of having colonies and of civilizing inferior races. All such appeals go over their heads or pass by them like the idle wind. In fact, this evil is not pointed out now for the first time. There was some rather loud talk about it in Boston back in the sixties and seventies, as futile as Dr. Engelmann's will probably be.

A SIDELIGHT ON TAMMANY.

A significant sidelight is thrown upon the working of the Tammany machine by Hutchins Hapgood's 'Autobiography of a Thief,' just published by Fox, Duffield & Co. Mr. Hapgood had the good fortune to meet an ex-pickpocket and burglar, who had served three terms in the penitentiary. The man had led a typical thief's life but he had unusual intelligence and "a gift of vigorous expression." At Mr. Hapgood's suggestion, Light-Fingered Jim has told his story and Mr. Hapgood has "edited" it. The document is genuine, for Mr. Hapgood and his publishers vouch for it personally, and internal evidence supports their claim. By "genuine" we do not mean that the thief has told the exact truth about all the incidents. He falls, for example, into certain anachronisms; he is probably older than he makes out; doubtless he has been tricked by his memory more than once; and in some passages he has consciously or unconsciously exaggerated. But these are minor matters; the book as a whole impresses the reader as an accurate presentation of the thief's personal point of view, a vivid picture of the society in which he lived and robbed, and of the influences, moral and political, by which he was surrounded.

The story, indeed, has something of the quality of Defoe's 'Colonel Jacque': it is filled with convincing details; and it tells not only of the career of the hero, but, by the way, of the achievements and the fates of his friends and accomplices. For most people, of course, the interest will lie in the sordid tale of a boy who saw on the street corners and in the saloons the swell thieves, and who easily fell into the belief that success in life was to be won by imitating them. For many of us in New York, however, the chief significance of the book is its reflection of the relations between Tammany and the under world of criminals. Here is another contribution to the mass of evidence which Josiah Flynt, on the one hand, and Mr. Jerome as District Attorney on the other, have been piling up.

Light-Fingered Jim took it for granted that Tammany was hand-in-glove with the criminal classes. In the first place, the thief talks about the system of "protection" just as he talks about saloons and gambling houses—matters of common knowledge, about the existence of which no one ever dreams of doubting. He was "shaken down" regularly. But if from motives of prudence the police were forced to make arrests, the "grafter" still had opportunities to get out of the toils, provided he or his friends had been wise enough to lay something by for a rainy day. The methods have often been exposed. The first step was to "fix" the police, whose memories would then suddenly fail; who could not surely identify the prisoner; whose minds grew hazy as to times and places. In case more desperate remedies were needed, the underground wires could reach the county offices, the grand jury, the petit jury, and even the bench itself. The thief ordered his whole life on the assumption that there was under Tammany a complete and elaborate system, from judge down to policeman, for taking care of "good" crooks.

Indeed, such a system is and must be an integral part of the Tammany plan. The Tammany crowd has always regarded the control of the city government as a money-making scheme. Croker was working for his own pocket all the time, and his followers have no conception of office except as a means to get rich, directly by drawing salaries, indirectly by every possible form of graft. Their imaginations are moved exactly as was that of Light-Fingered Jim, who says in speaking of his early ambition:

"A splendid sight one of these swell grafters was, as he stood before the bar, or smoked his cigar on the corner! Well dressed, with clean linen collar and shirt, a diamond in his tie, an air of ease and leisure all about him, what a contrast he formed to the respectable hod carrier, or truckman, or mechanic, with soiled clothes and no collar! And what a contrast was his dangerous life to that of the virtuous laborer! The result was that I grew to think the career of the grafter was the only one worth trying for. The real prizes of the world I knew nothing about. All that I saw of any interest to me was crooked, and so I began to pilfer right and left; there was nothing else for me to do."

Accordingly, as Mr. Hapgood says, "he went in for crime with energy and enthusiasm."

Exactly the same ambition impels the Tammany officeseeker. Here is a clean easy job, with plenty of pickings; it is much better than carrying the hod, driving a truck, or eking out a precarious existence as a shyster lawyer; and the Tammanyite starts in with energy and enthusiasm, as indifferent as Light-Fingered Jim himself to nice ethical considerations. It is this unity of ideals that makes it so easy for Tammany officeholders, from Mayor to policeman, to

get along with the "grafter." They understand each other perfectly; they can meet on common ground, without constraint on the one side or repugnance on the other. The average Tammany officer has no hesitation about helping the crook out of a scrape, and none about associating with him afterwards. The attitude of "Senator Wet Coin"—obviously Dry Dollar Sullivan—is typical. Of him Jim says:

"Senator Wet Coin made no pretensions to virtue; he never claimed to be better than others. But, in spite of the accusations against him, he has done far more for the public good than all the professional reformers, religious and other. He took many noted and professional criminals in the prime of their success and gave them positions, and by his influence kept them honest ever since. Some of them are high up, even run gin-mills to-day. I met one of them after my second bit (term of imprisonment), who used to make his thousands. Now he has a salary of eighteen dollars a week and is contented."

This easy *camaraderie* has its good side as well as its bad. Senator Wet Coin and the other district leaders have doubtless helped more than one crook to earn a fairly honest livelihood; and at the same time they have bound to them with hooks of steel all the crooks, regenerate and unregenerate; and they must stand and fall together.

THE GROWTH OF STEAM YACHTING.

So many steam yachts accompanied *Columbia*, *Constitution*, and *Reliance* in their contests in the Sound week before last, as to excite comment even among yachtsmen of experience. Because of the *America's* cup races the demand for yachts of all kinds and classes has been exceptionally great this spring. The splendid weather, too, has led to the commissioning of all pleasure craft earlier in the season than usual. As a result, the waters around New York are fairly teeming with yachts; and the racing season in the large and small clubs is well under way. It was evidenced by last week's ocean race of six large schooners for an Atlantic Yacht Club prize. But no development of American yachting is of more general interest than the great increase in the number of steam and power vessels. As a social phenomenon, and as an index to our national prosperity, it is well worth studying.

This development is clearly shown in the growth of the New York Yacht Club's steam fleet, which includes all those craft whose motive power is either gasolene, kerosene, or vapor engines. In 1890 the club book contained 80 such vessels; in 1890, 143; in 1900, 204; and in 1902 the number was swollen to 247. It is a striking fact that this growth has been in vessels of all sizes, and not merely in those of small dimensions. The largest steamer in 1890 was the ill-fated Vanderbilt cruiser *Alva*, 252 feet in length. There are now seven yachts measuring more than 300 feet in length, of which the largest, *Valiant*, belonging to Mr. W. K. Vanderbilt, has a gross tonnage of 1,823 tons. Each of them would rank well among the third-rate cruisers of the Federal navy, and would compare very favorably with the average transatlantic passenger steamer of the early eighties. In 1890 the number of the club's steamers between 100 and 200 feet of length was only forty-four. This figure had last year grown to 123, or 50 per cent. of the club's steam fleet.

Turning to the steam and power yachts listed in *Manning's Yacht Register* for 1903, we find no less than 526 of all sizes. *Lloyd's Register* contains 850 names of Canadian and American vessels in this class; but as it embraces many yachts which primarily depend upon their sails for their progress from port to port, the Manning list is the more useful for our present purpose. Upon it also are found the seven yachts over 300 feet in length, and in addition twenty-eight over 200 feet, and 205 of more than 100 feet length. All these are American-built, with the exception of forty, of which thirty-seven are products of English shipyards. Seventeen of the latter are credited to Mr. G. F. Watson alone, and fifty-two of the American boats to Herreshoff. The English vessels include nearly all the largest flying our yacht ensign—and it would therefore appear that the English builder still has the advantage in yacht-making, not only because of his comparative cheapness, but also on account of the greater experience of his designers.

Of the vessels described by Manning, seventy-two have motors in preference to steam engines. The present tendency of gasolene engines to displace the cumbrous steam machinery in boats under one hundred feet is, indeed, one of the most striking evolutions which this form of yachting is undergoing. In cheapness of construction, economy of fuel, ease of handling, as well as in saving of space, the gasolene or naphtha boat has the field almost to itself among small boats, particularly in cases where the cost of running is important, and where great speed is not a desideratum. But neither the popularity of this kind of craft, nor the Spanish war, is wholly responsible for the great increase in steam and power yachts since 1895. While a good many old yachts were worked off on the Government at fabulous prices in 1898, the great prosperity which the country has enjoyed is the prime cause of the addition of 212 new vessels since 1895. In times of financial distress the yacht basins are full of idle boats whose owners cannot afford to commission them, and in all such periods the number of pleasure craft to find their way into the plebeian merchant fleet is perceptibly larger than in ordinary times. But fashions in yachts change; it is the modern yacht that counts. Each year added to a vessel's age decreases its value in a disproportionate ratio as compared with real estate or other property. There are therefore but few old vessels to be found in Manning's book, the oldest being the *Barracouta*, launched in the year 1869. Her contemporaries, never very numerous, have gone the way of all ships, or, under changed and commonplace names, are wearing out their bones in duties never contemplated by their builders and first owners.

In a recent article in the *Rudder*, Mr. W. P. Stephens brought out the fact that the American steam yacht owner has changed very much within the last decade. The *nouveau riche* novice of ten or fifteen years ago wanted great speed and all the comforts of home. His yacht was meant to remind him of a Saratoga or Long Branch caravansary, and it is not surprising that many costly yachts turned out to be practical failures. Now there are coming to be several distinct types, each born of special needs and contructed with some reference to the limitations of the sea and to the demands of the sport—if one may use this word in connection with mastless hulls and high-power engines. There is the ocean-going cruiser, which can enter all seas, with a sustained speed of eighteen knots, and which can stay out in any winds. Next there is the coast-cruising craft about 130 feet in length, luxurious and comfortable, and of no great speed. Still another type is the auxiliary, of ten or twelve knots under steam, with bona-fide masts and sails, and capable of fair speed when under canvas. Of this class *Aloha*, the beautiful square-rigged flagship of the Seawanhaka Yacht Club, is perhaps the best example. Finally, there has suddenly grown up the torpedo-boat or "ferry-boat" class, of low, mastless vessels of phenomenal speed, intended to bring their owners down the Hudson or the Sound to business with the speed of the average suburban train. Of this section of the fleet *Arrow*, *Vixen*, *Chicota*, *Zinganee*, *Niagara IV.*, are the leaders, just as *Vamoose* and *Now Then* were the pioneers.

Despite the efforts of the American Yacht Club, races between steam yachts have never come into fashion. They are essentially pleasure craft, representing millions and costing vast sums to maintain, with engines too expensive for reckless use. But they are here to stay, and are destined to show the American flag in more and more ports, whatever the fate of our merchant marine, and however dependent they may be upon the fluctuating prosperity of the country.

THE PALACE OF MINOS.—I.

CNOSSOS, April 24, 1903.

I came very near making a serious mistake by failing to visit Crete before returning definitively to America. The centre of gravity of Mycenæan art and civilization

has shifted with a vengeance from Mycenæ and Troy to Crete. One who would now study this great field must no longer content himself with working around the circumference. He must go to the centre. Even the less important sites in Crete are yielding rich results. At Palaiokastro, at the extreme eastern end of the island, Mr. Bosanquet, the Director of the British School at Athens, has this year found Mycenæan vases which in quantity and quality far surpass those so carefully collected and published by Furtwängler and Loeschke. This monumental publication is now reduced to the rank of a *Vorarbeit*.

Miss Boyd, our countrywoman, now known in Crete as well as she was formerly known in Greece for high character and devotion to a cause, has taken for herself a sphere of operations near the east end of the island where it narrows to something resembling an isthmus, of a breadth of less than eight miles. In the last three years she has contributed an honorable share to the contents of the museum at Herakleion. At present she is completing the cleaning of a minor Mycenæan palace on a hill called Gournia.

But the great leaders in the excavations of the present time are the two men who have been pioneers in Cretan exploration. Dr. Halbherr, now Professor of Epigraphy in the University at Rome, began explorations in Crete twenty years ago. One of his first achievements was the exploration of the cave on Mt. Ida, which yielded wonderful archaic bronzes along with great shields covered with bronze reliefs of Phœnician technique. Even one year earlier, in 1884, he discovered the great Gortynian law code, by far the longest of Greek archaic inscriptions yet brought to light. In the early nineties, at the suggestion of the late Professor Merriam, who seems to have had a clear vision of what was coming, he was chosen to conduct explorations in Crete in behalf of the Archæological Institute of America. The results of this journey from one end of the island to the other were encouraging for greater undertakings. When one sees this young-looking, clean-cut, lively, and in the highest degree affable man, one can hardly believe that he is the pioneer of whom we have heard so much. Arthur Evans came later into the field, being drawn to Crete in 1894 by his interest in certain pre-Phœnician alphabetic signs, which he believed had their origin in the eastern part of the island among the Eteocretans. In his extensive journey no place arrested his attention so powerfully as Cnossos, which yielded a considerable number of these signs. Those were the days of tyranny and unrest in Crete, when no great excavation enterprise could be undertaken; but Evans was wise in his day and generation. The slight excavations which had been made on the site of Cnossos sixteen years earlier, by a native Cretan, convinced him that a part of the famous palace of Minos had been discovered. Indeed, W. J. Stillman had nearly come to this conclusion somewhat earlier. Evans's wisdom took practical shape in the gradual purchase of the greater part of the land which covered the ruins. In 1897 the storm burst out, and, after nearly two years of violence and bloodshed, came a settled government; then there was a great rush of archæologists to Crete. Evans was found securely seated in the saddle. Never were startling results more quickly reached than in his first campaign. To his wisdom was joined the most wonderful luck. Over a wide area he had to deal with only a few feet of earth before he came to the most important discoveries. The wonder grows that so much could have been left when the tops of great gypsum blocks of the palace were actually protruding out of the ground. The explanation is, that there was so much here that the unsystematic plundering of ages had not been able to get it all.

On reaching Herakleion by the Austrian Lloyd boat we were fortunate in finding Mr. Evans in town. It was Sunday, and on that day he rests from his work at Cnossos, four miles away, and passes the time in his city residence, a capacious and comfortable Turkish house. Rent is so cheap in this largest city of Crete that both his city house and his country house cost only about half the rent of a shanty in the neighborhood of New York. He does not come to the city for inglorious ease. Sunday serves his purpose for carrying along his process of converting prehistoric areas into fields of luminous history. He spent the greater part of the afternoon in showing us around the museum, where we saw, not altogether superficially, although of course hastily, the principal contents. Professor Halbherr also was in town, but we did not meet him until ten days later. He has selected his sphere of influence near the place of his first triumph, at Gortyna, and, after excavating the great palace of Phaistos, he is now uncovering a smaller palace, about four miles distant, by the seashore. He had interrupted his work for Easter, and as the Greek Easter came in the following week, when most of the days are holidays, he was making a pause of two weeks. Evans's workmen are largely Mohammedans, and so he works right through both weeks.

Reserving the more minute examination of the museum and the survey of Evans's great work at Cnossos for the last, we, three of us, with a Turk for a guide, so picturesque in his gay but somewhat soiled attire that he reminded me constantly of Sancho Panza, set out on an eight days' ride through the island. One who will see Crete must get into the saddle, for there are no carriage roads, except one from Herakleion to Cnossos, and another, of about equal length, from Suda Bay to Canea, the capital. I resist the temptation to describe those glorious eight days of travel, because my subject is too large without that. I will speak only of Mycenæan remains which must be compared with those of Cnossos.

Our first goal was the region where Halbherr has accomplished so much. We went straight across the island at its broadest part, with comparatively little climbing, keeping between the high mountains, Ida and Dicte. Under the new régime of Prince George, from which great things are expected, there is talk of a railroad being laid out somewhere near the line which we followed. Towards evening we came to the village of Hagii Deka (named after the ten saints who are said to have suffered martyrdom here under Decius, and who have a circular precinct dedicated to them in the middle of the village), lying among the ruins of Gortyna, which in classical and especially in Roman times was a great city, second only to Cnossos. We had just time before dark to get a good look at the famous inscription. The next day we spent among Halbherr's preserves, going first to the farthest point, Hagia Triada, where lies the small palace now being uncovered. Our host Manoli (a nickname for Emmanuel), the representative of the family which has entertained all the strangers who have passed that way for the last forty years, insisted on going with us, and took the Mohammedan guide in tow as if he were of no consequence whatever. Manoli is quite a character; he is the owner of the famous mill which made the study of the law code so difficult, and claims to be the real discoverer of the inscription; at any rate, he has had influence enough to block the efforts of archæologists to get possession of the mill and its surroundings. With his fine horse he set a pace that was rather hard to follow. It seems that he went along partly as a protector of the Mohammedan, who groaned inwardly and sometimes outwardly as we passed Mohammedan villages destroyed by the Christians in 1897-98. In our whole journey we passed about a hundred such villages, and it is no wonder that Hassan groaned. He was not abused anywhere, but he was not treated very cordially. Manoli asked us to tell Evans "to send him no more Mohammedans."

Arrived at Hagia Triada we found a Mycenæan palace, which Halbherr regards as a suburban villa, already pretty well cleared. We missed his personal guidance, but took abundant time to see for ourselves. The complexus of rooms climbs the slope of a low hill, and so has flights of steps and indications of upper stories. So far as one can now judge, the whole considerably surpasses in size the royal palace at Mycenæ. The walls are stuccoed and frescoed; baths abound. Although some of the more important finds had been transferred to Herakleion, quantities of Mycenæan pottery and some of still older date lay in heaps upon the ground. One feature of the recent finds was a great quantity of clay seals, several of which lay in a little pile on the stump of a column. The guard referred to these as "broken bits." One of them, with a Mycenæan woman wearing the flounced skirt so long known from the seal ring found at Mycenæ, which bears also the double axe, was so fine that I wanted to put it in my pocket or else ask the guard to give it to me as "a broken bit"; but, vacillating between the two courses, I finally left it lying there. An archæologist subsequently told me that I was the second man whom he had met who seemed to have a conscience in such matters.

Of the objects recently brought from Hagia Triada into the museum at Herakleion may be mentioned eleven great plaques of bronze about two inches thick, with concave sides and ends. I did not ascertain their weight, but they are commonly believed to be ancient talents. With such money one would be safe from pickpockets, who could not easily make away with pieces of money that weighed at least ten or fifteen pounds apiece. Another attractive object is a small black vase, on which stands erect a ruler with his sceptre, which he strikes on the ground, as if in wrath, while a man, apparently a leader of his forces, stands before him with slightly bowed head as if receiving orders from his superior. Behind the captain stands the army, represented by three men covered by

one enormous shield, which is probably meant for three, that allows only the heads and feet of the warriors to appear. The execution is not particularly fine, but the attitude and expression of king and captain are very effective.

A ride of a little over half an hour brought us to Phaistos, on a high hill somewhat lower than others intervening between it and the sea, which appears, however, in the gaps between them. It is a commanding situation, and was chosen as overlooking the great plain, Messara, which runs deep into the island some thirty miles. This plain, which we traversed lengthwise nearly all the next day, is clearly a lake bottom between the backbone of the island over which we had already come and a narrow chain of high mountains running parallel to it on the south side, shutting it off from the sea. This character of a lake bottom appeared most plainly as we got our first sight of it, coming from Herakleion. The water ultimately forced its way out into the sea by Hagia Triada. That this great plain, the largest in Crete, could have been the permanent property of two cities, Gortyna and Phaistos, is unlikely. Until some clear traces of Mycenæan remains are found at Gortyna, we may be sure that Phaistos was the first in control, and that Gortyna supplanted it, much as Argos supplanted Mycenæ. The fact that Epimenides came from Phaistos to purify and pacify troubled Athens would seem to indicate that the city at that early date had a long period of settled tranquillity behind it. The palace itself, however, is the most eloquent witness to the power that was enthroned there. It extends approximately three hundred feet in each direction, so that beside it the palace of Mycenæ is dwarfed. We shall doubtless continue to use the term Mycenæan from the simple accident that Mycenæ was the first city of the period to be brought to light. Its importance was also increased by the lucky discovery of its royal graves. Should the royal graves of Phaistos or Cnossus some day be found, even that preëminence will be taken from it, and it might be deemed worthy of some vassal of the kings who dwelt in these stately palaces.

Everything in the palace of Phaistos is on a grand scale: the corridors are broad, the courts are spacious, the traces of a second story are abundant. Under the present form of the palace may be seen traces of an earlier one, which can hardly be dated later than 2000 B. C. Among the many interesting objects found in the palace of Phaistos may be mentioned the upper part of a vase, I should say of gray alabaster, with a band of figures carved upon it, representing, as Halbherr thinks, a band of warriors, though most people seem to believe that it is a harvest festival. The musicians who lead the procession are beautifully carved, and have a wonderful expression of animation. There is no choicer gem in the museum at Herakleion.

RUFUS B. RICHARDSON.

WATTEAU.

PARIS, May 20.

The painter Watteau may be called one of the most characteristic exponents of French art in its most graceful form. It is impossible even for those who are only slightly familiar with the French art of the past century not to recognize at first sight a picture or a drawing by Watteau. Those who admire his work will read with interest and pleasure his biography, which has just been written by M. Virgile Josz. This author, without any preface, transports us at once to Valenciennes, the birthplace of Watteau, one of those northern towns touched by a ray of Flemish art, of the art of Antwerp, Bruges, Brussels, and Ghent. The Watteaus were burghers of the town; Jean Antoine was born there on the 10th of October, 1684. He proved too weak to adopt a manual occupation requiring strength, and entered as a boy the studio of a painter of Valenciennes, now quite unknown, named Gérin, and profited by his instruction for three years. His father died in 1702, and he was left alone at the age of eighteen. He set out for Paris in quest of fortune, and found work at the house of a man who sold little devotional portraits and objects, which were manufactured by the dozen. Some young apprentices painted the skies, others the heads, the draperies, etc. (There are to this day manufactures of such devotional pictures, which have a large market.) Young Watteau had a specialty: he was so accustomed to a particular saint that he afterwards told a friend, "I know my Saint Nicholas by heart." For this tedious work he received three livres at the end of the week, but he was allowed soup every day.

He made the acquaintance of a painter who was not much more fortunate than himself, Jean Jacques Spoëde, commonly called Sponde, who became his intimate friend. He also got acquainted with Gillot, whose name is still remembered, and who is generally considered the real master of Watteau. Watteau really had no master, but Gillot familiarized him with the Italian Theatre and with those Italian types, Harlequin, Pantaloon, Trivelin, etc., which became his favorites. After some time Gillot and Watteau quarrelled. "Never," says Gersaint, "were there more similar characters; but as they had the same defects, never were there more incompatible characters." Caylus adds: "They separated on bad terms, and all the gratitude which Watteau could show his master during the remainder of his life reduced itself to profound silence; he did not like people to inquire particularly about their friendship and their rupture. As to his works, he praised them and did not deny the obligations he was under to him." Watteau went to live in the Petit-Luxembourg with Audran, an artist and a decorator, and helped him in his work; he painted at the time four panels, which were a few years ago in a hôtel in the Rue de Poitiers: The Faun; Folly; Momus; The Toper. At a recent sale two of these panels fetched a high price.

Watteau had now found his manner; he was a decorator as well as a painter. To this period belongs one of his masterpieces, "Le Dénicheur de Moineaux." While he was at the Luxembourg he could study at ease the magnificent pictures of Rubens in the great gallery, and he became a colorist. In 1709 he sent a picture for the *Grand Prix de Rome*, but did not obtain it. He was much discouraged and left for Valenciennes in disgust. He then painted some military scenes, but after a while he returned to Paris. He was twenty-seven years old, and was in bad health. He fortunately this time found a picture dealer who recognized and valued his extraordinary talent, and who made life easy for him. There are few great painters nowadays who do not in the early part of their life owe to some intelligent picture dealer the ease of mind necessary for quiet production. The name of this providential dealer who assisted Watteau was Sirois, who lived in the Quai Neuf. Watteau, just returned from Flanders, where war was raging, painted first for him two military scenes, "Camp volant" (engraved by Cochin), and the "Détachement faisant Alte" (*Alte* is on the engraving for *halte*). He afterwards painted "Retour de Campagne."

At Sirois's, Watteau fortunately made the acquaintance of Mariette, so famous among artists and amateurs. Delivered from the daily cares of life, Watteau could follow the impulse of his individual genius; he cared very little for money, he cared chiefly for independence, and he now felt independent. It was also at Sirois's that Watteau became acquainted with Lesage, who had already given to the stage "Crispin rival de son maître," "Turcaret," a play which is still in the repertory of the French Theatre, and who was putting the last touches to the famous "Histoire de Gil Blas de Santillane." We read in a letter from Sirois:

> "This original [meaning Watteau], who makes pictures as freely as Monsieur Lesage makes comedies and books, with the difference that Monsieur Lesage is sometimes satisfied with his books and comedies, and that the poor Watteau is never satisfied with his pictures (which does not hinder him from being one of the present kings of the brush), has promised to paint for me a 'Festa de la Foire,' on which I have advanced him a hundred livres of the three hundred livres we bargained for. It will be his masterpiece if he puts the last touch to it; but if he is seized again by his black devils, we may say good-bye to the *chef d'œuvre*. The doctor has put him on a regimen of quinine."

In the same letter we are informed that Watteau was painting two scenes from the 'Diable Boiteux' at the price of one hundred and thirty livres each. These two pictures have never been seen in our time; perhaps they never were painted.

It was a piece of good fortune for Watteau to make the acquaintance of the famous collector Crozat, so well known to this day by his admirable collections. Crozat built a house on land, then deserted, where the great boulevards of Paris now extend; he filled it with marvellous works of art, pictures, busts, bronzes, drawings by the great masters. Though he was a contractor, he was a good and generous man; he took an interest in Watteau, and gave him orders. Watteau painted for him the "Seasons" (all four of which have been engraved) on panels.

In 1712, Watteau, urged by his friends, decided to become a candidate for the Academy of Fine Arts. He was obliged to paint a picture on a given subject, but he did not put his hand to it for several years. He found a new patron in M. de Jullienne, who afterwards consecrated a real fortune, four hundred thousand livres, to build a monument to the painter—four volumes containing each six hundred engravings. This rare book has for its title 'L'Œuvre d'Antoine Watteau, peintre du Roy en son Académie Royale de peinture et de sculpture, gravi d'après ses tableaux et dessins originaux, tirés du cabinet du Roy et des plus curieux

de l'Europe, par les soins de M. de Jullienne à Paris.' There were only a hundred copies of these four admirable folios. Watteau twice painted the portrait of Jullienne, his great admirer. One of these portraits is now in the collection of M. Groult, which contain so many masterpieces and is open only to the "happy few." It has been well engraved by Champollion.

Watteau had among his pupils Pater and Lancret, but Lancret soon took a line of his own; he became essentially a realistic—it may be said a domestic—painter, while Watteau remained always poetical and imaginative, even when he painted scenes of ordinary life. Crozat was so impressed by the talent of Watteau that he finally gave him a place in his own hôtel; it was just the sort of decoration which suited the talent of Watteau. He had no more cares; he was surrounded by beautiful works of art, brought by Crozat from Italy; he lived in a sort of dream; and his genius felt the effect of all this ease and beauty. He heard the best of music in the concerts given by Crozat. This was the period of the "Flûteur" (in the Groult collection), of the "Guitariste" (now in the Museum of Vienna), of the "Concert" (belonging to the Emperor of Germany), of the "Leçon de Musique" (in the Wallace collection). Crozat had a magnificent collection of drawings by the old masters, and this probably led Watteau to make many drawings himself—mere studies, which were not always intended to serve for large paintings. Generally made *à la sanguine*, with a red pencil, these drawings would suffice to make him famous. They are the real expression of all his thoughts, his admirations, and his dreams. They are not signed, but it is impossible not to recognize them at first sight. Jullienne said of them: "We hope the public will view with favor the drawings of the celebrated Watteau. They are conceived in a novel spirit; they have graces so allied to the mind of the author that we can safety say they are inimitable." Voltaire, on the contrary, wrote: "Watteau is a Flemish painter who worked in Paris, where he died a few years ago. He was successful in the little figures which he drew and which he grouped well; but he never did anything great; he was incapable of it."

Among the drawings left by Watteau to M. de Jullienne there is one which is his own portrait. He is represented with a pencil in his hand, sitting on a portfolio. Rosalba made a portrait of him which has been lost. In the portrait given to M. de Jullienne, Watteau has a sad, melancholy expression; his health was delicate; he could not stay long anywhere. He left the home of Crozat and returned to that of his father-in-law; he liked an independent life, and was fond of obscurity. The noise of Crozat's house fatigued him. He liked to walk for hours on the quays of the Seine. He was of an unstable disposition; he made rapid journeys to Italy, to London, where he painted pictures for a Doctor Mead. He remained about a year in London, from 1719 to 1720. On his return to Paris he painted several pictures, though his health was failing; he had conceived a sort of horror for the town, and spent most of his time in the neighborhood and the faubourgs of the capital. He longed to return to Valenciennes. Jullienne made a sale of his effects, which produced 3,000 livres. Immediately after, the painter was seized with a chill, and died in the month of August, 1721. The *Mercure* inserted this note: "The Fine Arts have suffered a great loss in the person of the Sieur Watteau, professor at the Royal Academy of Painting, who died of consumption at the age of thirty-seven, an age fatal to painting. The famous Raphael of Urbino and Eustache Le Sueur died at that age."

Correspondence.

COLONIAL LOVE OF TITLES.

To the Editor of The Nation:

Sir: In the review of Willison's Life of Sir Wilfrid Laurier, at least one sentence occurs which calls for comment. It is this:

"The political cable which binds Canada to the Imperial country has, by successive concessions of self-government, been worn to the last strand; and of that strand about the strongest thread is the extraordinary craving of Colonials for Imperial titles and decorations."

If this statement were solitary, I should not have noticed it, but it crops up constantly in some shape or other in the most intelligent discussions of our affairs in American journals and more deliberate works. It is not only incorrect, grotesquely incorrect, but the very opposite might be maintained. It was not in the days of the Family Compact, not in the time of direct government from Downing Street, not even in the agony of the Great Mutiny, but in the later crisis of national defeat, in the era of the "last strand," that Canadians volunteered by the thousands to fight the battles of the Empire. Your reviewer may think what he pleases of the war, but to commit himself to such an opinion in view of the history of the last three years is to show either ignorance or inability to interpret plain facts.

Again, such a statement will be felt by most Canadians like a slap in the face. There are some five millions of us; there may be some few hundred titles. How many "Colonials" can be ordering their lives to secure a title? How many who win them are sufficiently influential to be considered a "thread" in the "last strand"? Strange as it may seem, there have even been notable Canadians who have refused titles and have been applauded for so doing. Knowing something of both Canada and the United States, I have no hesitation in stating that in some respects Canada is the more truly democratic country of the two.

Your reviewer is to be congratulated upon his mysterious Machiavelli, the unnamed "low agent of the South African Company," who seduced the upright Sir Wilfrid. This most potent villain seems to have entered on the stage of Canadian politics direct from a romance by Dumas or Eugène Sue.—I am, sir, yours, etc.,

Archibald MacMechan.

Gananoque, Ontario, May 26, 1903.

[If a number of young Canadians joined the British army for the South African war, a far larger number enlisted in the army of the United States for the war of secession. The martial impulse, whatever its source or inducements, could hardly be deemed a "strand" in the permanent cable of political connection which has been attenuated by successive concessions of self-government.

The influence of titles and decorations and of the power of bestowing them in British politics is notorious. It appears to be still greater in the colonies. The other day, in Canada, Imperial decorations were solicited and received for an encounter with Fenians which took place in 1866. The *Canadian Almanack* gives a list of "Titled Canadians" forming a sort of miniature peerage. This is hardly "democratic." Some years ago, Mr. Edgar, afterwards Speaker of the Dominion Parliament, brought forward a motion against the prodigal use of Imperial titles, saying that he had a "strong prejudice against Canadians holding titles which did not directly or indirectly come from the Canadian people." Mr. Edgar afterwards himself accepted a title, thereby perhaps illustrating in his own person the force of the attraction.

If Mr. MacMechan doubts that an agent of the South African Company was busy at Ottawa and found access to the Premier, a little inquiry will probably dispel his doubt.—The Nation's Reviewer.]

THE MACABEBES.

To the Editor of The Nation:

Sir: I was interested in your editorial on Commissioner Ide's talk. Are you not, however, mistaken as to the native troops being "nearly all Macabebes"? There are perhaps 8,000 Philippine scouts attached to the regular army. Among them are respectively more Ilocanos, Tagalogs, and Visayans than Macabebes, while the other Christianized tribes are also represented. The Macabebes are only the people of one town and its outlying barrios in the lower part of Pampanga province, and, at a guess, there are not over 2,000 able-bodied men of military age among them. Your editorial gives the inference that the constabulary, the native police force of the civil Government, contains Macabebes. The last I knew of it personally it did not, unless they were stray members, and I think it safe to say it does not now and will not contain Macabebes.—Very truly yours,

James A. Le Roy.

Santa Fé, N. M., May 28, 1903.

MEMOIRS OF THE BROOKLYN INSTITUTE MUSEUM.

To the Editor of The Nation:

Sir: Your kind notice of Memoir No. 2, on "The Architectural Refinements of St. Mark's at Venice," in the series of Memoirs of Art and Archæology now in course of publication by Macmillan for the Brooklyn Institute Museum, has come to my attention. Your suggestion is especially noted and gratefully appreciated, that a monumental and complete publication on the mediæval architectural refinements is to be desired.

Will you kindly allow me to say that subscribers to these Museum Memoirs will

to some extent at least (if my life is spared) be able to obtain for themselves such a complete publication? Although these Memoirs are simply announced, so far, as serial publications, appearing at irregular intervals, and although the one you have just noticed, on St. Mark's at Venice, is the first of any great extent, they are intended to form a connected publication, the parts of which may be bound together in one or more volumes, and which will supply such a complete publication as you suggest.

This explanation anticipates the issue of a circular by the Macmillan Co. calling attention to the two memoirs already published, and announcing others as in preparation. As I have absolutely no financial interest in these publications, which are made in the cause of archæologic science, and as part of my routine work as a curator in the Brooklyn Museum, I trust that you will publish this announcement, which is made on behalf of the Director of our Museum, and by his authority.

Very truly yours, WM. H. GOODYEAR.

BROOKLYN MUSEUM, May 30, 1903.

Notes.

D. Appleton & Co. have in preparation a translation of Bismarck's Letters to his wife during the war of 1870-71, which have just appeared in Berlin.

For current issue Charles Scribner's Sons promise 'Our Feathered Game: A Handbook for Sportsmen,' by Dwight W. Huntington; 'Introduction to Classical Greek Literature,' by Prof. William Cranston Lawton; 'Our Government, National and Local,' by Profs. James A. James and Albert H. Sanford; 'Intarsia and Marquetry,' by F. Hamilton Jackson, and 'The New Life' of Dante, containing the Italian text with an English translation, edited by Luigi Ricci.

Macmillan Co. publish directly 'The United States' volume in the Cambridge Modern History series, and announce for the autumn a biography of John Fiske; 'Boston, the Place and the People,' by M. A. DeWolfe Howe; and the first two volumes of Herbert W. Paul's 'History of Modern England.'

John Lane is about to publish Shakspere's Poems in one volume, uniform with the thirty-six volumes of the Vale Press edition of the Plays; 'Life in the Mercantile Marine,' by Charles Protheroe; and a new and revised edition of Dr. Richard Garnett's 'Twilight of the Gods.'

'German Ambitions as They Affect Britain and the United States of America' is an immediate addition to Messrs. Putnam's "Questions of the Day" series.

'Mr. Chamberlain: His Life and Public Career,' by S. H. Jeyes, is in the press of E. J. Clode, No. 156 Fifth Avenue.

Professor Hoppin's book, 'Great Epochs in Art History,' was duly reviewed in these columns a year and a half ago. A second edition (Houghton, Mifflin & Co.) shows that the subjects treated have a general interest, and that the treatment of them has given pleasure to many readers. It appears that the book has not been changed since the first edition, except in having been carefully revised. As we turn the pages anew we note the very interesting discussion of sacred, or religious, or Biblical painting which comes naturally into the article on "Italian Religious Painting." A singular confession of timidity and lack of artistic purpose is put into the mouth of the Englishman Millais (p. 51), and a more extended examination of this paper reveals a great deal of that most important knowledge for the traveller—the information given by guide-books modified by the reasons for choice of place to visit, choice of paintings to study, and choice of masters to follow.

Mr. F. B. Sanborn's second monograph on the Concord philosophers, 'The Personality of Emerson' (Boston: Charles E. Goodspeed), is again an equal revelation of his own personality and personal history, which supplies the chronological progression of an otherwise rambling discourse, with some repetitiousness. The lights and sidelights on Emerson, however, are numerous, and the essay will be prized. There are some instances of Emerson's not happy judgment on his own verse in emendation or omission upon republication. The story, which he refused to believe, of John Adams's calling Washington a dolt recalls an anecdote, perhaps relating to a different occasion, of Adams's saying of the Father of his Country, "That old muttonhead made his reputation by keeping his mouth shut." Neither true, nor handsome; but such were the animosities of the time. The book is elegantly printed, but the Scott portrait, so highly praised by Mr. Sanborn, should have been better engraved or simply photographed. Compare, for example, the fine photograph (from life) prefixed to the second edition of Mr. John Albee's 'Reminiscences of Emerson' which we praised two years ago (New York: Robert Grier Cook).

We are tardy in noticing, with the praise which it deserves, Alice Bertha Kroeger's 'Guide to the Study and Use of Reference Books,' one of the A. L. A. series of Annotated Lists (Houghton, Mifflin & Co.). It passes in review the best encyclopædias, dictionaries, concordances, year-books, anthologies, etc., etc., in a classification which is made readily available by an exhaustive index of twenty pages in triple columns. Here one may find the books which indicate the best reading for children, and at the end a suggestive list of 100 reference books for a small library. There is frequent evaluation of the works enumerated, original or selected from critical authorities, and a helpful discourse relieves the barrenness of a bare catalogue. Librarians liable to be pestered by recurrent questions—as from school children set to investigate some subject—are recommended to keep their answers in readiness for fresh use; and we are told that "in many public libraries it is necessary to keep a card index of titles of poems" to meet inquiries.

'Gleanings of Virginia History,' by William Fletcher Boogher (Washington), is made up partly of notes and documents of the Colonial and Revolutionary period, and partly of genealogical records of well-known Virginian families. For students of Virginian history and genealogy it should have considerable interest, and it has the merit of being carefully indexed.

The Proceedings of the Vermont Historical Society for 1901-2, while they reveal the inert condition of this institution, possess no little intrinsic interest. There is a biographical sketch of the late Benjamin F. Stevens, with a portrait like enough to the late Charles A. Dana; a paper, by Dr. D. S. Kellogg, pretty well fortified, on "Early Mention of Events and Places in the Valley of Lake Champlain," and another, justifiably laudatory, on "Ethan Allen's Use of Language." This forcible if ungrammatical writer, speaking, in one of his pamphlets, of the lynching of the agents of the land-jobbers, says the Green Mountain Boys "chastised them with the whips of the wilderness, *the growth of the land which they coveted.*"

There is no lack of vitality in the Virginia Historical Society, to judge from the April number of its *Virginia Magazine*, completing the tenth volume. Publication from the State archives proceeds copiously along with Mr. Withington's "Virginia Gleanings in England," including Mr. Waters's unpublished store for this colony, and a further account of the Farrar Papers at Magdalene College, Cambridge, with a facsimile of John Poey's autograph, 1619, he being the Secretary of Virginia and Speaker of the first House of Burgesses. The John Brown correspondence is continued, and contains two sound prophecies from opposite sides—one, of the condemned Copeland, Brown's associate—"It is true that the outbreak at Harper's Ferry did not give immediate freedom to the slaves of this country, but it is the prelude to that great event"; the other, of one Snow, a Kentuckian with a very heated imagination, in Detroit, telling of plans to liberate Brown—"Unless the South is warned and armed in time, we shall have one of the most terrific civil wars that ever disgraced the annals of history, ancient or modern." We remark further a ghost story on page 437 which is accredited as telepathic by reference to "the art of photography and wireless telegraphy in the physical world." Finally, we must draw attention to the frontispiece view of "Bewley," in Lancaster Co., Va., the seat of the Ball family, a fine and individual specimen of Southern architecture, with an unusual double rank of dormer windows in the high-pitched roof. The detached servants' quarters add to the picturesqueness of the view.

From Randolph-Macon College comes in final form the annual publication of "The John P. Branch Historical Papers" (No. 3), consisting of "short biographical sketches of men who have had great influence in shaping Virginia's history," almost exclusively prepared by college students. This is an interesting experiment and must furnish excellent discipline. It is announced that the historical resources of the college library are inadequate, and friendly aid in repairing this deficiency is bespoken by the editor, Prof. William E. Dodd. Ritchie of the *Richmond Inquirer* of ante-bellum days, and Secretary Upshur, one of the victims of the gun explosion on the *Princeton*, are among the notabilities commemorated in the present issue. George Mason and George C. Dromgoole will figure in next year's. Some inedited historical matter, chiefly correspondence, ekes out a pamphlet of 100 pages.

The twenty-seventh annual report of the Boston Museum of Fine Arts fitly opens with a memorial sketch of the late director, Gen. Charles Greely Loring. His successor, Mr. Edward Robinson, and his associates have to tell of the creation of a

department of Egyptian Art, with a full curator, more than half the collection of antiquities proceeding from the Egypt Exploration Fund; of the appointment of an assistant curator of classical antiquities, and of a keeper of paintings, who has rearranged the galleries most satisfactorily; of the loss, also, by ill-health, of the curator of the department of Japanese art. His colleague, Professor Morse, keeper of Japanese pottery, announces that the Museum's duplicate collection, "in provinces, potters, and signatures, far outnumbers the largest collections of Japanese pottery in Europe as represented by their published catalogues." The chief addition to the paintings has been a small canvas by Paul Veronese; but a painting heretofore ascribed to Rembrandt and bearing his name and date seems, after removal of the varnish, convincingly his. A notable bequest has been the William Arnold Buffum collection of objects in amber; and by the courtesy of the Berlin Museum a full-size cast of the Colleoni equestrian statue in Venice has been procurable by a private donor. The curator of the print department calls attention to its collection of 3,400 Daumier lithographs.

The annual report of the curators of the Bodleian Library tells of recent purchases having given this institution "an entirely new and important position as a depository of Sanskrit MSS. of high antiquity"; also, the earliest signature of Sir Thomas Bodley which the library possesses; and, most singular of all, "the first and fourth leaves of the Life of S. Petronylla, printed by Richard Pinson about 1495. The Library already possessed the second and third leaves among the 'Douce fragments'; the purchase of these other two makes the work complete; it is not in the British Museum." Attention may be drawn to the acme of close yet accessible storage devised in the Old Ashmolean basement, which was "divided into two storeys, with an open iron lattice-work floor, and fitted up with iron wheeling cases, which were filled with closed sections of fiction removed from the Bodleian and Sheldonian basement."

"The Restoration of the Ancient Irrigation Works on the Tigris; or, the Recreation of Chaldea," was the subject of an address before the Khedivial Geographical Society by Sir William Willcocks recently published in Cairo. With plans and diagrams are described the two great irrigation systems of the ancients on either bank of the river, which, in a length of some 240 miles, must have sufficed to irrigate nearly 2,000,000 acres of extremely fertile but now waste land. Sir William ascribes their ruin not to the devastations of barbarians, but to the sudden shifting of the bed of the Tigris. According to Arrian, however, many of the irrigation dams were cut by Alexander in order to improve the navigation of the river. Among historical allusions is the interesting suggestion that "Nebuchadnezzar erected his golden image probably to commemorate a thorough restoration" of the Nahrwân Canal. While much of the Mesopotamian land has become too saline to repay any outlay on its improvement, there still remain some 2,800,000 acres which might profitably be reclaimed and cultivated. The expense of canalization, earthworks, and weirs is estimated at $100,000,000, but it is believed that the return would be $300,000,000. "These figures may seem large," the lecturer adds, "but we are in one of the most famous agricultural tracts in the world, a tract whose past history justifies us in expecting that great results will follow if we bring to the solution of our problems the same wisdom which the wise men of Chaldea brought to the problems of their day."

The *Annales de Géographie* for May opens with an appreciative and extended notice of Mr. F. S. Hall's census report on the localization of industries in the United States. The report's peculiar interest to the student lies in its enabling him to measure the influence of the historic factor in "human geography." In America, "we always know the date at which, the form under which, this historic factor has manifested itself. We know that in such a year [1750] a Welsh shoemaker laid the foundation of his industry at Lynn; we know exactly when the first refrigerator car left the stock-yards of Chicago for the port of Boston, and what has been the influence of this new fact on the localization of meat-packing." The other important articles are upon the régime of the Vistula, and the Sahara Oranais in southwestern Algeria. In this region are still to be found traces of the great Jewish population of the fifteenth century. Most of the inhabitants now are negroes, but it is uncertain whether they are the descendants of an aboriginal race or were brought thither as slaves. Professor A. Lacroix describes the last eruptions of St. Vincent in March, 1903, with some striking photographs.

An interesting ethnological experiment is the attempt which is being made in Germany to reawaken in the Jews their long-dormant love for the cultivation of the soil through an agricultural school. It was opened ten years ago at Ahlem, near Hanover, with nine pupils, who have now increased to more than one hundred, ninety-two boys and twenty-six girls. The instruction up to the age of fourteen is that of the elementary schools, and then follows, for the boys, a three years' course in horticulture and agriculture. According to Mr. Jay White, our consul at Hanover, "a number of the students after leaving Ahlem have found good positions as gardeners near New York and Philadelphia, and their employers are reported to be well satisfied with their services."

—The leading article of serious interest in the June *Scribner's* is Brig.-Gen. William H. Carter's account of the War Department, on the side of its military administration. The administration of civil government by the War Department is reserved for a future article by Judge Charles E. Magoon. Gen. Carter sketches the work of the Department rapidly from the beginning down to the present time, naturally dealing more fully with the past five years. He admits the failure to rise to the occasion at the beginning of the war with Spain. "Tampa will always be to the army and the people a synonym of blunder and reproach." He admits, also, that the army has not come unscathed out of the discussion of its conduct in the Philippines, but intimates quite clearly that continued Republican successes at the polls are sufficient to wipe out the stain. Noticeable is the apparent assumption that McKinley's actions after the disaster to the *Maine* were intended merely to gain time for preparation for an inevitable conflict, and not to secure a peaceful settlement; also, in the closing paragraph, the assumption that the great wave of prosperity which the country has enjoyed for the past few years is simply a result of the Spanish war—no particulars given. Edward Whymper contributes a well illustrated account of his adventures among the Canadian Rockies, in the Banff region, where he spent the summer of 1901, accompanied by four professional mountaineers from Europe. Russell Sturgis considers the proposed building for art exhibitions in New York city, pleading for such a structure as will furnish ample room for special exhibitions of individual societies, occasional general displays, and comfortable quarters for the various societies in their routine work as organizations.

—The *Century* and *Harper's* each have a morsel for the archæologist in their June *menu*. In the latter we have a detailed description of the methods by which the successive strata of Tel el-Jezair are being excavated and studied by Alexander Macalister, under the auspices of the Palestine Exploration Fund. The results indicate that six different cities have occupied the site, and that it became substantially a *tabula rasa* during each intervening period. The oldest occupation left a record of semi-savage conditions, showing no trace of the use of metals. In the second stratum, flint and bone implements and ornaments are mingled with copper and bronze. Rectangular houses were constructed, though of uncut stone. The third layer shows improvement in buildings, tools, and ornaments, presenting types which seem to relate it to the period of the middle empire in Egypt. The inhabitants of the second and third cities are supposed to have belonged to the earliest waves of Semitic immigration, the ancestors of the tribes in possession at the time of the Israelitish invasion. The fourth stratum shows traces of the use of iron, but in the art of building is not abreast of the third. Ægean influences appear in the pottery. The parts of the two upper strata so far uncovered are not of great importance, and further work is at present delayed by an outbreak of cholera. In the *Century*, Howard Crosby Butler describes the deserted cities of Northern Central Syria, a region about as large as the State of New York, which has been apparently almost entirely uninhabited for thirteen centuries, and as yet scarcely touched by modern explorers. The problem of the desertion of this region, after it had been for generations the seat of an advanced Greek and Roman civilization, Mr. Butler answers tentatively, but with considerable confidence, on the hypothesis of a wholesale destruction of its forests for timber, by which the soil was exposed to such disastrous erosion that it was finally abandoned.

—The pen of Goldwin Smith was never more effective than in his paper on the "Cult of Napoleon," in the June *Atlantic*. The world's debt to Napoleon is a vast recrudescence of militarism, with its attendant barbarities; Cæsarism, with its dead-level equality beneath the Cæsar in lieu of real freedom; above all, a "dazzling example of immoral success and renown." The one lasting benefit of his career is to be found in the fact that the final ruin of his schemes

cut away from his country the territorial accessions of the whole Revolutionary period, thus leaving France within bounds too narrow to endanger the balance of power. Oswald Garrison Villard contributes a paper on the "Negro in the Regular Army," showing from the facts of our own military history since the outbreak of the Rebellion that the negro can be depended upon as a courageous, intelligent, and loyal element in our armies. A notable fact in connection with apologies for lynching is the freedom of our colored troops in the Philippines from participation in the notorious water-torture. Dr. John Bascom writes of "Changes in College Life," devoting himself largely to the effects of the multitude of new studies which have been crowding into the college curricula during the past few decades. A key to much that he has to say in this line may be found in the words, "An institution whose ostensible purpose is to teach a young man anything he may wish to know, may mean an institution a large per cent. of whose members learn very little to any purpose." President Eliot's suggestive address at the Boston Emerson Centenary, as well as the ode for the same occasion by Professor Woodberry, is reproduced in this issue. The orator strains the comparison of Emersonian ideals with the recent trend in their direction, and in some particulars does not exalt his subject. A signal instance of this is his showing that Emerson twice, as an Overseer of Harvard College, voted against abolishing compulsory prayers. This is flatly unthinkable.

—The architecture of the Renaissance in England has been very fully covered in such admirable old books as Nash's 'Mansions' and of late in Gotch's monograph on the earlier part of the period, and in Belcher and McCartney's equally excellent work upon the latter part, and especially in Blomfield's History of the whole period; yet, curiously enough, no book has hitherto been devoted to the interior woodwork of the style, and this in spite of the fact that the woodwork is highly characteristic of its several periods. 'English Interior Woodwork of the XVIth, XVIIth, and XVIIIth Centuries,' by Henry Tanner, jr. (London: Batsford; New York: Scribner), was undertaken in order to exhibit the best examples of chimney-pieces, panelling, staircases, doors, screens, etc., by measured drawings and descriptive notes. The drawings are skilfully presented, and are made with such accuracy as to be of use not only to the student of the style, but to architects generally, and indeed to that ever-increasing class which takes a more than casual interest in architecture and the arts associated with it. The examples chosen illustrate the more important phases of the style, as, first, the very beautiful woodwork made by Italians in England at the time of Henry VIII., work which left singularly little impress on the native art; second, Elizabethan and Jacobean woodwork, in which classic models, coming by way of Germany and the Netherlands, were so perverted as often to be scarcely recognizable; third, work of the time when Inigo Jones rescued the style from its crudities, and when Wren carried it to its culminating point, when woodwork, adorned by the carvings of Grinling Gibbons, reached a higher level than ever before or since, in England. Mr. Tanner's book will hold an honorable position among those of the most serious character devoted to the architecture of the long period between the last of the Henrys and the first of the Georges.

—The great 'Dictionary of National Biography,' brought to its successful completion by Mr. Sidney Lee, has just been capped by a conformable volume called an "Index and Epitome" (London: Smith, Elder & Co.; New York: Macmillan). The inconvenience of putting your hand on any one of sixty-six volumes in a split alphabet is already considerable, but a further labor awaits the attempt to track the desired personage, especially when the name is a common one and is illustrated by a great number of individuals. Again, we may be seeking a hasty identification, and must find our clue in incident or publication among, say, all the Joneses or Robinsons, or such of them as have the same prenomen. To bring the whole body of the Dictionary, then, within the compass of 1,456 pages effects at once an enormous saving in handling, and vastly facilitates comparison for the purposes just named. Inclusion and omission are revealed at a glance; and all those vexatious cross-references from titled name to family name have their sting deftly extracted by being lodged between two covers. Finally, there is the gain of having the sub-entries brought up into the main alphabet. Take at random the wood-engraver John Thompson (1785-1866). The article devoted to him in volume 56 includes his younger brother, Charles, and son, Charles Thurston. Both these were properly entered in the index to the volume in question; but in the "Index and Epitome" they are accorded the same independent prominence as John Thompson or any of the greatest names on England's beadroll. The result is a work of reference eminently desirable to possess apart from the major collection, since, with all the compression of particulars, "room has been found for all memorable achievements with the dates of their accomplishment, for titles of an author's chief books with dates of publication, for notices of scientific inventions, for dates of institution to offices, and detailed particulars of education." Each name has a reference to volume and page of the parent work. The reduction has had for its norm the proportion of 1 to 14, and has been remarkably carried out for the longer biographies. Leslie Stephen's compact Carlyle, for example, in thirty-four columns, is here condensed into half a column (of fine type). We must remind our readers once more that to a large extent this Dictionary embraces the elder American worthies, like Gov. Bradford and his namesake the New York and Philadelphia printer; Myles Standish, John Harvard, Roger Williams, the Mathers, the Winthrops, Thomas Hutchinson, Sir W. Pepperell, and many more.

—As we summon the nations to celebrate with us the centenary of the Louisiana Purchase, we are apt to forget that to one of the invited guests the anniversary recalls anything but cheerful memories. In the May number of *La España Moderna*, Sr. Jerónimo Becker, Archivist of the Ministry of State, gives the history of the cession from a Spanish point of view. He rehearses in detail the familiar story of the transfer of Louisiana to Spain in 1763, in compensation for the loss of Florida to England, and of the tricky bargain by which Napoleon recovered the Territory, with six men-of-war to boot, in return for the bestowal upon the Duke of Parma of the improvised "Kingdom of Etruria"; Napoleon pledging himself never to alienate the Territory to a third Power. According to Sr. Becker, Talleyrand even went so far as to assure the Spanish Government, in return for the sum of $1,000,000 duly paid and another million promised, that the cession was to be merely ostensible, and that Spain might keep her province, after all! Three years later, the unscrupulous First Consul had sold Louisiana to the Americans; the Americans were laying claim to the Floridas as a part of their purchase; and the "Kingdom of Etruria" was still dominated by French bayonets. No wonder that Sr. Becker calls our joyful anniversary "a very sad date." A curious sequel to the story is that, in 1815, the Spanish Ministry entertained hopes of regaining Louisiana by the action of the Congress of Vienna. Labrador, the Spanish emissary, was urged to make every effort for restitution. Of this project he easily saw the futility, but he devised an ingenious plan of recovery of his own. The English, he wrote on February 13, were now in possession of New Orleans (or so it was believed in Vienna), and thereby virtually in occupation of the entire Territory. Though they were bound by the Treaty of Ghent to respect the American possession of Louisiana, this must be distasteful to them, and perhaps they would prefer to hand it over to Spain. The Duke of Wellington, he added, had personally expressed his approval of this arrangement. Of course, when this scheme was broached at London, it led to nothing. Sr. Becker has not forgiven France, but he nowhere expresses any resentment at the conduct of America. A curious limitation in his treatment of the whole historical question is that he seems to regard it solely as a matter of diplomacy and of documentary title, and closes his eyes to the fact that, whether Spanish rulers and statesmen were weak or strong, foolish or wise, their authority within the present boundaries of the United States was inevitably destined to be swept away by the tide of American expansion.

A GEOGRAPHICAL STUDY OF THE MEDITERRANEAN EAST.

The Nearer East. By D. G. Hogarth, M.A., Fellow of Magdalen College, Oxford. London: William Heinemann; New York: D. Appleton & Co. 1902.

This volume forms one of a series of geographical handbooks to (or rather, perhaps, monographs on) different regions of the world, the first of which, that on the British Isles, by Mr. Mackinder, the editor of the series, was noticed in these columns a few months ago. The idea of the series is excellent. It is to present a compendious account of the physical phenomena of various parts of the earth's surface as an introduction to, and preparation for, the study of their history, describing each department of these phenomena with an eye to the influence which they have respectively exerted on the progress of the various races of man which have there grown up. Nothing is more characteristic of the new direction given both to history and to geography in our time than the sense

which has begun to pervade the students of each subject that the relation between them is intimate and pervasive. Geography is now rightly regarded as one of the foundations, and indeed the chief foundation, of history; history as the crown of geography, because it gives to geographical facts a deeper significance, and suggests aspects which geographers themselves had formerly overlooked. This point of view is rigorously adhered to in the present volume. Though more than four-fifths of it is occupied with matters which belong to the sphere of physical geography, it is not a treatise on physical geography, for it handles the facts of that science, not in and for themselves, but only in so far as they directly affect the life of man. Both in the scheme and in the execution of the book the clearness with which the writer has conceived his theme and the rigor with which he has adhered to the lines prescribed are conspicuous, and witness to the solidity of his mind.

The scheme has, however, some defects. To begin with, the area selected is an arbitrary one. It is not a natural area, *i. e.*, one clearly demarcated by natural boundaries, for it excludes the valley of the lower Danube, which cannot be separated from the Balkanic masses that bound it on the south; and it excludes Russian Transcaucasia, whose natural affinities are with the mountain lands that lie to the south of it. The omission of these two regions suggests that political limits have been regarded in the determination of the space covered by the book, and that the term "Nearer East" is meant to include only what may be called the Turkish and Persian East. Yet in point of fact the book does not include the whole Turkish East, for it omits (quite rightly from a geographical point of view) Tripoli, and it covers (also quite rightly) something more, viz., the kingdom of Greece. All divisions of the earth's surface which are not marked out by oceans must no doubt have a certain element of the arbitrary, but here the omission of Bulgaria and Transcaucasia is really unfortunate, when the ethnographic and political aspects of the subject are considered.

A more serious defect is in the distribution of the matter of the book. The "Nearer East" is divided into five districts: "The Balkans Belts," "The Asian Ascent" (Asia Minor), "The Central Upland" (Armenia and Persia), South Western Plains, Egypt. Each of these is treated separately under the head of area and position, again under the head of structure (*i. e.*, geological structure), again under the head of climate, again (in Part II,) under the heads of "Distribution of Man," "Grouping," "Products," "Communications," and "Conditions of Life." The heads are ingenious and suggestive, but the general purpose would, we think, have been better served by beginning with a general view of the whole "Nearer East," then dealing with each of the five districts in all its physical aspects considered together, and finally connecting the treatment of the five by a broad and summary review of the area called the "Nearer East" as a whole. As it is, the reader is carried so often from one district to another that he finds it difficult to get a clear view of the physical conditions of each one of them and of the conditions of the whole area in their totality.

As will have been gathered from the outline we have given of its arrangement, the book is careful and thorough. The author knows a considerable part of the area, including Greece, Egypt, and Asia Minor, from personal observation. He has taken great pains to reach and profit by the best printed sources of information. He is diligent, learned, and accurate. He is scientific in the German sense of the word, and indeed so scientific as to be almost needlessly technical. The treatise is full of knowledge, solid, relevant, well digested, and stated with force and precision. It is, however, decidedly hard reading, partly, perhaps, because it is so concise, partly because the writer disdains what may be called the arts and graces of description. He assumes in his readers not only a good deal of knowledge, but also a capacity for extracting all the significance from his pregnant phrases. So a reader may call it either interesting or dry according to his own tastes and the measure of his own familiarity with the *præcognoscenda* of the subject. The latter half of the book, where man is dealt with, contains many suggestive passages, some of which are expressed with trenchant vigor. Take, for instance, this upon the Arab nomads:

"The distinguishing Bedawin characteristic is, in a word, that of his land, Meagreness. Meagreness of osseous, starved frame, short of stature, and doomed to early decay; meagreness of sensory faculties, eyes and ears dull of hearing and sight, except in tracking a foe; meagreness of mental qualities, issuing in unstable, shifty conscience, in easy cowardice, in absence of religion, in gusty passions, and in swift deterioration upon contact with civilization. The man of the Arabian desert is an ineffective animal, bad shot, bad rider, bad fighter, bad breeder, and, when brought out of his steppes, as bad a cultivator as a citizen; but for all that an attractive animal. Take him on his own high and open desert, the product of its keen air and clean, non-verminous soil. He has all the outward charm which purity of race and freedom from servitude and menial toil through many generations confer all over the world. His shape, his bearing, his social code are alike noble. A guest need not ask what relation there may be between his theory and his practice, nor try him long or hard, but, wandering as the Bedawin does, he may admire the simplicity, frugality, and patient obedience of successive camps, himself possessed by the indefinable exhilaration of the Waste. And should he wish to stay long in the desert, he must be sure he has in his own nature more than a little sympathy with indolent, unreflective quietism, the Eastern, not the Western, type of mind, which can empty itself at will of all thought and all desire of action."

These broad, sometimes half-paradoxical statements may need a little qualification, and may seem scarcely self-consistent; but they are illuminative to those who have only the conventional notion of the Arab, drawn from poetry or romance, or read into the narratives of the early Muslim conquests. So, too, the observations upon the Albanians and the Greeks are not only penetrating, but in the main just. There is no sentiment about the author's handling of these themes, and indeed when he comes to treat of the Christian population of Asiatic Turkey, he shows a deficiency of sympathy with their position that somewhat affects the value of his judgment. Seeing their faults, as a Western traveller naturally does, he seems to realize inadequately how hardly their misfortunes have borne on them, and the possibilities that might open before them if once the Turkish rule were removed. Not that he confines his view to the present. In one of the most instructive chapters of the book, that entitled "World Relation," he describes with great precision and insight the salient feature of the place which the "Nearer East" has come to hold during the last hundred, and still more distinctly during the last forty years. This region has become significant, not so much for its own intrinsic worth, which is at this moment comparatively slight (though capable of great development), as because it offers a land route from civilized and populous Europe to the Further East, populous, productive, and either possessed by, or overshadowed by, great European Powers. It is, as Mr. Hogarth justly says, a Debatable Land, "distracted internally by a ceaseless war of influences and only too anxious to lean, in one part or another, upon external aid." It is, moreover, already largely de-orientalized, and likely more and more to pass under European influences. What has befallen Egypt must before long befall Syria, Palestine, Mesopotamia, and a large part of Asia Minor. The political obstacles are plain enough, but political obstacles yield in the end to economic and social forces.

The really critical event in the history of the Nearer East is an event which happened in the Further East, viz., the English conquest of India. Napoleon's expedition to Egypt in 1798 was the first palpable recognition of the importance of southwestern Asia as a line of passage to those remoter regions which the English had won and held, owing to their command of the long ocean route. The making of the Suez Canal was a natural consequence. The project for a railway from Konieh to the Persian Gulf, which would be the first half of a railway to India, is a further and not less legitimate result. This project, which, suggested more than fifty years ago, has so perturbed financiers and politicians in Germany and England during the last few months, is certain, despite the temporary check it has received, to be carried out at no distant date; and it may probably bring Germany as a fourth political influence into regions where, fifty years ago, France, Russia, and England were already watching one another with a jealousy which was one of the causes that produced the Crimean war. And though (as our author observes) it is chiefly as a land of passage that the Nearer East now draws the attention of Europe, no one can doubt that the opening up of communications through it must eventually change both its economic and its political conditions, developing those fertile parts of it which have lain long neglected, and fusing into larger bodies those races and sects, and sections of races and sects, whose divisions and reciprocal antagonisms have made it for many generations a prey to weakness and unrest.

FIVE NOVELS.

Youth. By Joseph Conrad. McClure, Phillips & Co.

The Private Papers of Henry Ryecroft. By George Gissing. E. P. Dutton & Co.

His Daughter First. By Arthur Sherburne Hardy. Houghton, Mifflin, & Co.

The Conquering of Kate. By J. P. Mowbray. Doubleday, Page & Co.

Wee Macgreegor. By J. J. Bell. Harper & Brothers.

At the time when Mr. Joseph Conrad began to write tales of adventure in the Southern Pacific, novelists were much concerned about getting local color into their work. They searched the earth for geographical novelty and linguistic eccentricity, and concentrated their attention on those superficial attributes and traits of humanity which are developed by climate, association, and local habits. There was little then in Mr. Conrad's work to indicate that he had any profounder reason for writing fiction than that suggested by the chance of first-hand acquaintance with scenes lying out of the beaten path of travel and people born or banished beyond the reach of social or moral law. Gradually, however, he has shown himself to be one of nature's licensed story-tellers, holding a warrant to explore the heart of life and to discover some of its mystery and pain. His latest volume, entitled 'Youth,' places him unmistakably among the best imaginative writers of his period. Objectively, the tales are realistic, sometimes violently realistic like Kipling's, but the record of action of particular things done and suffered is united with the universally human by a great imagination and a temperamental impressionability rich as Pierre Loti's, yet saved from sickliness by an Anglo-Saxon sanity. The easily named qualities that count are observation and knowledge of men, of affairs, of places; abundant resources for action and for variety of people to carry it on, and a power of expression so fluent and intense that it often runs into prodigality. Yet these qualities are only slaves of the lamp, doing perfectly the master's bidding, while themselves ignorant of magic and possessing no power to work enchantments. The enchantment worked by Mr. Conrad's imagination is the elevation of all sorts of facts, the common and unusual, the sordid and picturesque, the heroic and ignoble, to an atmosphere charged with emotion at a very high pitch.

The first tale narrates the adventures of the *Judæa* carrying coal from London to Bangkok. The *Judæa* was old and utterly unseaworthy; the captain was old, the mate was old, and they may have been spurred to their perilous venture by the reflection that, after all, they had not much of life to lose. The second mate was a boy of twenty, and the adventure of the battered ship and the ancient mariners is so suffused with his emotion that literal account of disaster and failure becomes a lyrical expression of the hope and courage and joy of youth.

"Heart of Darkness" vibrates with loathing of a land where primeval nature assumes the functions of a vengeful fate, and either kills invaders of her awful solitudes or reduces them to the condition of brutes. It is a dreadful and fascinating tale, full as any of Poe's of mystery and haunting terrors, yet with a substantial basis of reality that no man who had not lived as well as dreamed could conjure into existence. The tale is told by a young man whose business in Africa was to navigate a river steamboat. One quotation may give a notion of the author's realism and impressionability. The young man had arrived at the first trading station and already supped full of horrors:

"I went to work the next day, turning, so to speak, my back on that station. In that way only it seemed to me I could keep my hold on the redeeming facts of life. Still, one must look about sometimes; and then I saw this station, these men strolling aimlessly about in the sunshine of the yard. I asked myself sometimes what it all meant. They wandered here and there with their absurd long staves in their hands, like a lot of faithless pilgrims bewitched inside a rotten fence. The word ivory rang in the air, was whispered, was sighed. You would think they were praying to it. A taint of imbecile rapacity blew through it all, like a whiff from some corpse. By Jove! I've never seen anything so unreal in my life. And outside, the silent wilderness surrounding this cleared speck on the earth struck me as something great and invincible, like evil or truth, waiting patiently for the passing away of this fantastic invasion."

The third subject is in a way an easy one for exciting tearful sentiment. The average heart may be touched by any sort of description of a man who in old age is forced to begin again the struggle for existence with all the odds against him. Mr. Conrad gets emotion to the heart-breaking moment as much by repression of the sentimental attitude and appeal as by the splendid delineation of old Capt. Whalley facing with fortitude and equanimity disaster after disaster, until he comes to "the end of the tether" and goes down with his ship. There is no strained heroism, nothing ever so slightly improbable or artificial in the portrait of Capt. Whalley. He is just an honest, strong, invincibly proud old man, fighting fate single-handed, and determined to fight to a finish. This sort of fight is never really a matter for tears; it seems to reflect a glory on the human race, and establish a ground for the desire for immortality. There are two sorts of Englishmen who command the world's admiration—the English adventurer and the English poet. Mr. Conrad is a rover and a poet, so the great qualities of his brood are in his work, which can hardly fail to take a permanent place in the national literature.

In the preface to 'The Private Papers of Henry Ryecroft' it is assumed that Mr. Gissing found the papers after the writer's death, and published them thinking that they might be valuable, at least for their sincerity's sake, to those "who read not with the eye alone, but with the mind." They are interesting and valuable for frank expression of unpopular truths, but still more, to some interpreting minds, for a naïve revelation of abysmal selfishness which Mr. Ryecroft (who looks like Mr. Gissing in thin disguise) seems hardly ever to have recognized as a possible constituent of his make-up. At the age of twenty, Ryecroft, possessing a genuine passion for letters and a fine capacity for ranging himself with the opposition, stumbled into London, unknown and poor, intending to write for a living. For a few years he remained very poor, but he did gradually get on; so well, indeed, that for twenty years he supported himself, his wife, and daughter, even managing "now and then to earn a little more money than his actual needs demanded, and thus was enabled to see something of foreign countries." At the age of fifty, when death had disembarrassed him of his wife, and marriage separated him, seemingly as irrevocably, from his daughter; "when his health had begun to fail and his energies to show abatement," a friend bequeathed to him a life annuity of three hundred pounds. In the luxurious seclusion of a country house, to which he at once retired, these papers were written. True, his career had not been glorious, but, considering his very poor equipment for succeeding in a profession that demands a rather eager interest in life, and the tact and skill to lead those whom one may privately despise, he had not done badly; therefore his wailing about the hideousness of poverty, the awful waste of his peculiarly promising youth, the constant and hateful toil of his middle years, strikes us as unseemly, as not the utterance of a man who could have deserved much consideration from his fellow-men or with whom a wife and daughter could ever have lived comfortably. His female impedimenta are mentioned directly only in the preface. Ryecroft shrouds them in decent silence. But he probably had them in mind when he wrote that most men's experience would justify them in declaring that, on the surface of the habitable globe, there is no house in which words of anger are never heard, where no unkindly feeling ever exists between the inmates. A state of squabble is to him the normal domestic state. "Quit the home," he reflects, "and quarrelling is less obvious, but it goes on all about one."

His affection for the peaceful home in which he writes is distinctly an affection for the house, the long-dreamed-of haven where he has his own way, beautifully, autocratically. This affection he extends to the very weeds of his garden and to the adjacent villages. "I find myself reading with interest all the local news in the Exeter paper. Not that I care about the people; with barely one or two exceptions, the people are nothing to me, and the less I see of them, the better I am pleased." If Mr. Gissing should edit the reciprocal feelings of the people of Exeter, the volume might be a lively commentary on Ryecroft's. Once in a while a habitually introspective person does catch a glimpse of his real self, and Ryecroft does not entirely escape this depressing accident of self-examination. Writing about his lack of friends during his very hard times, he remarks: "The truth is, I have never learnt to regard myself as a member of society. For me there have always been two entities —myself and the world—and the normal relation between these two has been hostile." But the consistency of Ryecroft's illusions is not often marred by such reflection. All his thoughts and opinions express the man who has cared only and cared profoundly for himself, relied on his own judgment, his own point of view, receiving nothing from the life around him, and giving it neither understanding nor sympathy. If that is the sort of man Mr. Gissing meant to delineate, he has done him with scrupulous fidelity. Such persons have a certain pathos, because, while they cry with truth that life has yielded nothing but stones, they cannot believe that it is because they never knew how to ask for bread.

'His Daughter First' is an innocent work of fiction. The author cannot long think harm of any one. Though he tries to endow some of his people with defects, such as craftiness and insincerity, his attachment to the square thing gets the better of him; so they all decide for virtue and get happily married. The tale is a tale of lovers (six of them), and the reader does not readily keep them properly sorted. The most interesting pair are Mr. Heald and Miss Temple, perhaps because they are at least tempted by Satan. Miss Temple yields so far as to write a spiteful letter to a widow whom she properly suspects of wishing to marry her father, John Temple, of course a widower. Mr. Heald plunges deeper in sin, and is really implicated in several shady transactions. Insignificant as the story is, it prompts an interesting inquiry, why Mr. Hardy chose to reappear in fiction with nothing of interest or importance to communicate. The only discoverable reason is a desire to depict the manners of a group of people representing New England's "nice" or "best" people—people not notable for stormy passions, and evolved beyond the temptation of vulgar impulses. These admirable persons have already received considerable attention in fiction, and their charming way of receiving guests, of greeting each other at breakfast, their tea-drinking and dining—the whole record, indeed, of their day's adventure, has been long consecrated to the genius of the society reporter. Even such esoteric information as that rich daughters of the republic have maids to lay out their clothes, do their hair, perform the solemn office of "preparing a bath," hardly requires confirmation by a novelist. We could never have doubted that Mr. Hardy's ladies were properly washed and combed and hooked. There was a time (within the memory of man) when they might not have been—the time when the New England conscience was a power and learning in high repute. A good time is never recognized till it is past, and as we reflect on Mr. Hardy's well-turned-out ladies, we feel certain that the good time for converting the women of New England into interesting reading was the time of moral rigidity and mental earnestness; the time when whatever care the body may have received was bestowed in secret, and deemed, if not among the unmentionable subjects, at least among those "not fit for publication."

The scene, plot, and characters of the 'Conquering of Kate' are very familiar to novel-readers. Scores of tales have been written about Southern ladies of long descent reduced to poverty, immensely proud and insolent, determined to defend to the death the family mansion and the family estate from seizure by unfeeling creditors. When a good-looking young man, hateful emissary of hated enemies, rides up to the door, politely inviting the ladies to a business consultation, the train and issue of negotiations are at once foreseen. The young man is received in the parlor by a maiden aunt, who regales him with a history of the family, declines to consider any business, and shows him the door. But the young man has come to stay. He bears affronts with dignity, patiently returns good for evil, does wonderful things with the "property," is at once so firm, so self-effacing, and so useful that the hard heart of the loveliest and most insulting of the ladies is softened and she consents to become his bride. Mr. Mowbray's version of this ancient legend is readable, includes several diverting episodes, and one character who is quite fascinating because of his comprehensive unlikeness to the thing he is supposed to represent. Mr. Journingham, the English aspirant to the honor of Kate's hand, is the Englishman imagined by a good American who has never known a specimen of the island race, but always in perfect good faith hated the very thought of one. It is long since he ceased to appear in American fiction, and to meet him again surrounded by old and rather tedious friends is to add to the sentiment of the occasion a touch of welcome hilarity.

Any one who understands Lowland Scotch may get an hour's amusement out of 'Wee Macgreegor.' The inquisitive child and his doting parents are Glasgow folk drawn from the life and to the life. If they are exceptional at all it is in possessing more leisure and good temper than most Scotch families of the lower class. Mr. Bell's method is strikingly clever. The sketches are done in dialogue almost without description or explanatory comment, yet the Robinson family's characteristics are clearly revealed, and though the reader feels the presence of ironical humor, the author preserves gravity, never appearing to know that he is in the least funny. The few passages written in English show that Mr. Bell can use that language effectively both for plain statement and for humorous satire.

RECENT POETRY.

'The Poems and Verses of Charles Dickens,' edited by F. G. Kitton (Harpers), is a handsomely printed volume of which the binding is unquestionably the best part, while the prefaces of the editor rank next to it. The book is chiefly interesting as affording an evidence of that revival of Dickens about which the newspapers tell us so much, but do not make it clear that we are to gain greatly by the revival. Israel Zangwill's 'Blind Children' (Funk & Wagnalls) is, like all his books, interesting as a branch of personal biography; and while in these pages he can scarcely be said to give us grace or music anywhere, yet there is plenty of the pungency with which the readers of his prose are familiar.

'Love's Old Sweet Song,' by George H. Ellwanger (Dodd, Mead & Co.), is a reprinted and imperfectly revised edition of a previous work called 'Love's Demesne,' by the same author. It is a tolerably miscellaneous collection from different sources, but of course includes many good poems, and a curious preface in which a dozen or more living English poets are mentioned with enthusiasm, while not an American name appears in the introduction. There is a paged index of first lines, but no paged index of poems by their titles. With these drawbacks, the book affords a pleasing selection. A like criticism applies to a work in many respects admirable, entitled 'The Posy Ring: A Book of Verse for Children, Chosen and Classified by Kate Douglas Wiggin and Nora Archibald Smith' (McClure, Phillips & Co.). Here the paper, type, and mechanical execution are altogether delightful, and the selection is fairly good, but there is no alphabetical index at all of authors or of first lines. Mr. S. B. Herrick has added to the too numerous collections of miscellaneous sonnets a beautifully printed volume called 'A Century of Sonnets' (R. H. Russell), fairly good in the selection, though not especially so, and with an elaborate preface. Aldrich's fine sonnet at page 50 is an elder or later version, varying in many particulars from that contained, under the name of "Miracles," in the fine "Paint and Clay Club" edition of 1882. On the whole, the later form may be regarded as an improvement.

'The Black Prince, and Other Poems,' by Maurice Baring (Lane), consists mainly of a dramatic poem which has the unusual quality of weaving in songs much better than the text, the usual practice being quite the other way. The Nurse's Song, for instance, above the deathbed of the Black Prince, has a distinctly weird and original cadence (p. 139):

From the bleak sand and the grey sand
(O son o' mine, good-bye),
To the shore of gold and the cornland
To conquer or to die.

The low cloud and the grey cloud
(O son o' mine, good-bye),
It hangs and lowers like a shroud
Across the blood-red sky.

The soft sound and the loved sound
(O son o' mine, good bye):
"Mother, I have a mortal wound,"
It is my own son's cry.

The horn call and the glad call
(O son o' mine, good-bye):
"Now dig the grave and weave the pall,
For I am soon to die."

The lone bell and the sad bell
(O son o' mine, good-bye):
"Tell me, mother, before I fell,
That I fought gallantly."

'Lyrics of Love and Laughter,' by Paul Laurence Dunbar (Dodd, Mead & Co.), are a pleasing variation, in one respect, from his earlier poems, in that they rely less on the African dialect and are stronger in other directions, although the "dialect poems" still predominate. The following, for instance, has in it a touch of what is, after all, Walt Whitman's masterpiece, "The Song of the Open Road," although it produces no effect of imitation (p. 3):

TO THE ROAD.

Cool is the wind, for the summer is waning,
Who's for the road?
Sun-flecked and soft, where the dead leaves are raining,
Who's for the road?
Knapsack and alpenstock press hand and shoulder,
Prick of the brier and roll of the boulder;
This be your lot till the season grow older;
Who's for the road?

Up and away in the hush of the morning,
Who's for the road?
Vagabond he, all conventions a-scorning,
Who's for the road?
Music of warblers so merrily singing,
Draughts from the rill from the roadside upspringing,
Nectar of grapes from the vines lowly swinging,
These on the road.

Now every house is a hut or a hovel,
Come to the road:
Mankind and moles in the dark love to grovel,
But to the road.
Throw off the loads that are bending you double;
Love is for life, only labor is trouble;
Truce to the town, whose best gift is a bubble:
Come to the road!

'A Wanderer's Songs of the Sea,' by Charles Keeler (San Francisco: Robertson), have the double benefit of southern and northern explorations, and we not only get from him such deep-water chanties as "Aye, aye, aye, Mr. Storm Along!" and "Down, down in the doldrums down!" but love songs with such a wonderful vocabulary as that of "A Song of Bering Sea." Mr. Robert Loveman, author of 'The Gates of Silence, with Interludes of Songs' (Knickerbocker Press), is a poet of Western birth and Southern residence, who has won a modest success very easily, having been

compared at different times by rather exuberant editors to Wordsworth, Tennyson, Poe, Aldrich, Lovelace, and Henley. His brief poems have become somewhat monotonous, and perhaps the best are now the most daring, as the following (p. 19):

"I want no trickster God—
No cunning, crafty spook—
Who smites a people or a rock,
Or one who writes a book.

"For me a God who flings
Out of His spendthrift hands
The whirling worlds like pebbles,
The meshed stars like sands."

'Puerto Rican and Other Impressions,' by William James (Putnams), is one of the first of that long series of literary works which our new tropical possession may call forth; and the illustrations at least are, for that reason, very effective. From page 44 we select:

THE PINK PALACE.

This house is called a palace, but to me
Far more it is a fortress, with huge walls
Of sturdy grandeur and vast echoing halls.
On mighty ramparts near the fern is free
To nod in answer to the phantasy
Of ancient echo whensoe'er it calls
To mediæval ghost the past enthralls,
But cannot keep—nor yet will quite set free.

To-day a garden smiles where warriors strode;
To-day the stalls are empty; where the steed
Of Andalusia's swart hidalgo rode
Now gentle mosses bloom and weed rejoices.
Near by a chapel stands; where wounds did bleed
There soft-eyed nuns now sing with softer voices.

There is a distinct and steady revival of purely dramatic poetry, as in 'The Canterbury Pilgrims: A Comedy,' by Percy Mackaye (Macmillan); 'The Princess of Hanover,' by Margaret L. Woods (Holt); 'David and Bathshua,' by Charles Whitworth Wynne (Knickerbocker Press); and 'Two Masques,' by Oswald Crawfurd (London: Chapman & Hall). The most original, not to say promising, of these dramatic compositions is the first named, a really remarkable achievement. It is no slight test of an author's resources to produce before our eyes and ears, in good lively dialect and with inexhaustible vivacity, all that range of visitors whom Chaucer has ventured to group together at the Tabard. Mr. Mackaye has unflinchingly given us the grotesqueness, the vigor, the coarseness of the Elizabethan age, often coming near the very verge of peril, but never getting beyond the safeguard of the "Whoop! do me no harm, good man" which formed in that period the line of safety. So many people of varied types are crowded into this book, and with such sustained animal spirits, that it sends a reader back not merely to his Chaucer, but to his Shakspere, with renewed power to get behind the scenes.

'Pompeii of the West, and Other Poems,' by John Hall Ingham (Lippincott), is a book of modest claims and really noble attainments, with much of strength both of spirit and of expression. The title poem is a fine memorial of the great Chicago Exposition and its palaces, and the following is one of the best contributions to the new Emerson anthology which is this year so rapidly rolling up (p. 20):

A CLIFF VISITOR.

Deep-blue with autumn blasts the billows rolled
Before us as we scanned on open page
The rarest spirit of our clime and age,
When from the rocks above us, gray and cold,
A feathered glint of emerald and gold
Flashed on our sense—as though the Concord mage
Had sent a winged thought—a heritage
Of finer truth than written word could hold.
A hummingbird it was: fearless it flew
And struck the scarlet robe beneath our feet
In hope of honey. Man and Nature drew
Once more into communion strange and sweet,
And, for the moment, rock and bird and sea
The poet's magic made humanity.

A DIPLOMAT'S WIFE.

Letters of a Diplomat's Wife. By Mary King Waddington. Charles Scribner's Sons. 1903.

Among the spirited portraits which Madame Waddington sketches with so light and free a touch, not the least interesting is the incidental one of herself. Belonging to a family whose social and political importance dates from the earliest days of the republic, she inherits as a matter of course a certain point of view. In the world of principalities and powers—Vanity Fair and *là haute politique*—she is breathing her native air, whether her place of abode chance to be France or Russia, England or the United States. In addition to inherited adaptation, Madame Waddington possesses as her personal endowment a charming gayety of temper, an insatiable interest in everything which goes on around her, and a quick wit. After reading her letters—the most entertaining which have appeared since Lady Granville's—one is left with the cheerful impression that, in a world of misfits, here at least was the right person in the right place. The astonishing thing is that any one who, by her own account, dislikes writing, should have written such letters. More than once she plaintively says, "I hate so to write."

"Ink all over me," she exclaims, "fingers, hair, etc. I can't say, as Madame de Sévigné did, 'ma plume vole,' for mine stops and scratches, and makes holes in the paper, and does everything it can to make my writing difficult. I wonder why I hate it so—I do; as soon as I sit down to my writing-table I want to go out or play on the piano, or even crochet little petticoats—anything rather than write."

The letters are informal. Hastily dashed off while the impressions which they record were still fresh, they have, fortunately, not been greatly revised.

M. Waddington, whose distinguished career is briefly outlined in an introductory note, was sent as Ambassador Extraordinary to represent France at the coronation of the Emperor Alexander III. at Moscow, in May, 1883. Since none of the prophesied misfortunes occurred, it is difficult to realize, particularly at this distance of time, how seriously the dangers of the coronation were regarded. The appalling assassination of Alexander II. was still fresh in men's minds. Madame Waddington says of the appointment:

"I was too bewildered at first to take it in, and I must frankly say I was wretched. . . . Of course it will be a magnificent sight, but I am a perfect poltroon—I am so afraid they will take advantage of that crowd to blow up everybody. However, if that should happen it would be better to be blown up together, but I really am nervous, (I am not usually such a coward, but Russian Nihilists and dynamiters are terrible elements to contend with), and wish they hadn't asked him to go."

We get a vivid picture of days filled with the bustle of preparation for high festivities—gala carriages, court dresses, jewels ("I have taken everything the family own"); and nights made uneasy by apprehension. A guardian was appointed for the boy, and affairs were put in order—"cheerful preparations for a festive journey." From Moscow Madame Waddington writes; "It is curious to live in such a highly charged atmosphere, and yet I am less nervous—I wonder why; the excitement, I suppose, of the whole thing." There is a thrilling account of the Emperor's ride through the city to the Kremlin. It is a capital description and we can quite see it all: the crowd—"such pale, patient faces, but so *un*joyous"—kept back by the triple row of soldiers; the gorgeous, semi-barbaric procession; the bells, the music, "the steady tramp of soldiers and the curious, dull noise of a great crowd of people." Then the Emperor, "riding quite alone in front on his little white horse which he had ridden in the Turkish campaign"; and the Empress, with her little daughter, so far behind and with so many troops between, that the Emperor might easily have been killed, she knowing nothing of it.

"Every ear was strained to hear the first sound from the Kremlin. When the cannon boomed out, the effect was indescribable. All the Russians embraced each other, some with tears running down their cheeks, everybody shook hands with everybody, and for a moment the emotion was contagious. The extraordinary reaction showed what the tension had been."

The coronation, of course, is described in all its pomp, and the writer afterwards speaks of what was to her the most striking thing in all the ceremonies: "First, the moment when the Emperor crowned himself, the only figure standing on the dais, and afterwards when he crowned the Empress, she kneeling before him." The life of the Ambassadress was arduous; up betimes in the morning, riding about in the state carriage, which, with its swinging motion, was provocative of seasickness, and standing for hours at a time. Dinners and balls in the evening, and making one's manners all day. One day she writes: "I am just alive, but nothing more, having performed five Grand Duchesses." The Empress said to Madame Waddington that the day of the coronation would be

"very long and tiring, particularly beginning so early in the morning, that she was very *matinale*; was I? 'Fairly—but I hadn't often been up and dressed in full dress and diamonds at seven in the morning.' . . . We talked a little about Moscow and the Kremlin. She asked me what I had seen. When I spoke of the church and the tribunes for the Corps Diplomatique with *no* seats and a very long ceremony, she was quite indifferent; evidently didn't think it was of the slightest consequence whether we were tired or not; and I don't suppose it is."

Later we read: "How hideous the life of the Emperor and the Empress must be. They say they find letters on their tables, in their carriages, coming from no one knows where, telling them of all the horrors in store for them and their children." In this light, the Empress's indifference over the fatigue of the Ambassadors seems natural. The detective attached to the French embassy feared some great demonstration of the Nihilists on the gala night at the opera. "It would be such a good opportunity to get rid of all the Russian princes, to say nothing of the foreigners. He and Pontécoulant suggested to W. that I should be left at home, but I protested vigorously. If they all go, I am going too." And go she did.

After his return from Russia, M. Waddington was appointed Ambassador at the Court of St. James, and remained in that position for ten years. Fortunately his wife, who still declared that she hated writing, had many members of her family to write to. The story of her life goes on with equal vivacity and freshness. In an

earlier letter she had said that she sometimes asked herself if she were "the same little girl that used to run wild in the country at home with a donkey cart and a big Newfoundland dog." We seem to get a glimpse of that little girl when she says, after an exceptionally frivolous outing, "I think in her heart Jean was rather shocked at the Aquarium performance—didn't think it was exactly the place for me; that was the reason I liked it, I suppose. I am so often now in the place where I ought to be."

The letters are chiefly taken up, however, with dignified functions, and a long series of the most interesting personages of modern times pass before us, made lifelike by the vivid style of the narrator. Of the Queen, and, indeed, of all the royal family, we get an exceedingly pleasant impression. "She was unfailing to us both from the first moment, always welcomed us with the same smile, was always inclined to talk about anything, and to understand and smooth over any little difficulty or misunderstanding. I think she is a wonderful woman and a wonderful Queen." And at the jubilee:

"It was most interesting to see her come up the aisle—quite alone in front—her three sons, Wales, Edinburgh, and Connaught, just behind her. . . . As she reached the dais she stepped on it quite alone, and, advancing to the front, made a pretty curtsey to the assembled Royalties. Then came a long procession of family princes, headed by the Prince of Wales and the German Crown Prince, who looked magnificent in his white uniform, and the Princess of Wales and the German Crown Princess. They all passed before the Queen, and it was most striking to see her seated there, a quiet figure dressed in black, very composed and smiling, yet *émue*, too, as the long line of children and grandchildren, representing all Europe, passed to do her homage."

At the end of her stay in England, Madame Waddington was able to say that "they had been ten perfectly happy years," and, as she adds, "ten years is a good piece out of one's life." Among the last ceremonies that she records is the farewell dinner which was given for M. Waddington at the Mansion House and which she saw from the gallery of the Banqueting Hall.

"There was a blaze of light and at first I couldn't recognize anyone, and then I saw W. standing, drinking out of the loving cup, with the Lord Mayor on one side and Rustem on the other, and gradually I made out a good many people. There were two long tables besides the *table d'honneur*, and they told me about 300 guests. All the representative men and intelligence of England assembled to say God-speed to the departing Ambassador. The Speaker and Lord Herschell (Presidents of the two Houses) were both there, and men of every possible coterie from Lord Lorne to James Knowles of the *Nineteenth Century*. As soon as the regular toasts had been drunk, there was a pause, and then came the toast of the evening, with 'bumpers,' 'The French Ambassador.' There were roars of applause when W. got on his legs, and I must confess to a decided choke in my throat. W. spoke (in English, which they had asked him to do) very simply and very well, going back to his early days. When he said that he had done his best always to keep up good and friendly relations with England, and that he had had much sympathy from all sides, he was much cheered; but much more when he said that perhaps what had given him more friends in England than any of his public acts as a statesman, was the fact that he had rowed in the University eight at Cambridge. Then there were roars of applause, and he heard quite distinctly the people below saying, 'He is quite right, we always remember it.' He was quite *ému* when he came to the end; his voice taking that grave tone I like so much when he said 'goodbye.' One heard every word. He was much cheered when he finished. . . . He hasn't always had an easy time with his English name and his English education. Of course, it has been very useful to him here, as he has been thrown with all sorts of people, and could understand the English point of view, but in France they were always afraid he was too English. I think when he has gone they will realize at home what good work he has done here *because* he understands them."

One closes the book wishing it were longer, which proves perhaps that it is about the right length.

The Souls of Black Folk: Essays and Sketches by W. E. Burghardt Du Bois. Chicago: A. C. McClurg & Co.

Mr. Du Bois has written a profoundly interesting and affecting book, remarkable as a piece of literature apart from its inner significance. The negrophobist will remind us that Mr. Du Bois is not so black as he has painted himself, and will credit to the white blood in his veins the power and beauty of his book. But the fact is, that the features of Mr. Du Bois's mind are negro features to a degree that those of his face are not. They are the sensibility, the tenderness, the "avenues to God hid from men of Northern brain," which Emerson divined in the black people. The bar of music from one "Sorrow Song" or another which stands at the head of each chapter is a hint (unintended) that what follows is that strain writ large, that Mr. Du Bois's thought and expression are highly characteristic of his people, are cultivated varieties of those emotional and imaginative qualities which are the prevailing traits of the uncultivated negro mind. Hence one more argument for that higher education of the negro for which Mr. Du Bois so eloquently pleads. Such education of ten thousand negroes would be justified by one product like this.

The book will come as a surprise to some persons who have heard Mr. Du Bois speak upon his people's character and destiny, and, finding him coldly intellectual, have not been at all prepared for the emotion and the passion throbbing here in every chapter, almost every page. It is almost intolerably sad. "Bone of the bone and flesh of the flesh of them that live within the veil," the writer manifests throughout an aching sense of the wrongs done to his people, heretofore and still. But those will greatly misconceive who think that we have here merely an outburst of emotion. Back of this there is careful knowledge of past and present conditions in the South, clear insight into their meanings, a firm intellectual apprehension of their tendency, which is something to be reckoned with by every citizen who has at heart the welfare of his country, inseparable from the welfare of the colored people. The perfervid rhetoric will seem extravagant to the dull and cold, but, though it sometimes obscures what it would fain illuminate, it is the writer's individual form, it is not the substance of his protestation, which is compact of intellectual seriousness and moral truth.

The initial chapter is of a general character, setting forth the spiritual strivings of the negro—to be at once a negro and an American; "to be a co-worker in the kingdom of culture, to escape both death and isolation; to use his best powers and his latent genius," which have heretofore been so wasted, dispersed, and forgotten. A second chapter takes more definite shape, telling the story of emancipation, what it meant to the blacks, and what happened in the days of the carpet-bagger and his coadjutors in the Reconstruction period. The emphasis is on the Freedmen's Bureau, whose merits and demerits are considered in an impartial manner. There is an eloquent tribute to "the crusade of the New England schoolma'am" in the South, which in one year gave instruction to more than one hundred thousand blacks. There is a fit rebuke for the cheap nonsense, of which we hear so much, concerning the enfranchisement of the negro. There was no choice, we are very properly assured, between full and restricted suffrage; only a choice between suffrage and a new form of slavery. It is conceded that a race-feud was the inevitable consequence of the choice the North was forced to make.

But the most concrete chapter in Mr. Du Bois's book is the third, "Of Mr. Booker T. Washington and Others." Mr. Washington's ascendancy is designated as "the most striking thing in the history of the American negro since 1876." Entertained with unlimited energy, enthusiasm, and faith, his programme "startled and won the applause of the South, interested and won the admiration of the North, and, after a confused murmur of protest, it silenced if it did not convert the negroes themselves." The merits of that programme are detailed with warm appreciation, while at the same time a criticism is made upon it so thoughtfully conceived that it deserves the attention of Mr. Washington's best friends and the best friends of the negro and the white people of the South. The criticism will be resented with bitterness by those for whom Washington's attraction is the concessions they suppose him to have made, and with hardly less by many who are convinced that he has solved the race problem in a completely successful manner. There are those who seem to regard any criticism of his programme as only a less malignant form of lese-majesty than criticism of the war programme of a President. But he is strong and wise enough to welcome any honest difference from his own views and aims. The criticism is that Mr. Washington asks the negro to surrender, at least for the present, political power, insistence on civil rights, the higher education. Advocated for fifteen years, triumphant for ten, this policy has coincided with the disfranchisement of the negro, his relegation to a civil status of distinct inferiority, the impoverishment of institutions devoted to the negro's higher education. That here is not merely coincidence, but effect, is Mr. Du Bois's contention. Also, that Mr. Washington's desired ends cannot be reached without important additions to his means: the negro may not hope to be a successful business man and property owner without political rights, to be thrifty and self-respecting, while consenting to civic inferiority, to secure good common-school and industrial training without institutions of higher learning. "Tuskegee itself could not remain open a day were it not for teachers trained in negro colleges, or trained by their graduates."

It is not so clear to us as it is to Mr. Du Bois that Mr. Washington has made the base concessions here ascribed to him. We recall passages in his books and speeches and letters that point a different moral. We recall his protests sent to the disfranchising conventions in Alabama and Louisiana. It may be that of late he has become more subdued than formerly to those he has worked with, some of whom have the habit of giving his programme the color of their own exaggerated caution and timidity. Then, too, Mr. Du Bois, while acknowledging that Mr. Washington's programme is provisional, does not make this acknowledgment with sufficient emphasis. But this third chapter as a whole, and the expansion of its prominent details in the succeeding chapters, deserve the carefullest consideration. Their large intelligence and their lofty temper demand for them an appreciation as generous as the spirit in which they are conceived.

Where all is good, it is invidious to select, but the chapters "On the Training of Black Men" and "Of the Sons of Master and Man" merit, perhaps, particular attention. The pathos of the chapter called "The Passing of the First Born" is immeasurably deep. It will appeal to all who have a human heart. It tells the story of a baby's life and death, the joy his coming meant; the "awful gladness" when he died: "Not dead, but escaped; not bond, but free." Clearly the burden of Mr. Du Bois's complaint, not explicitly, but implicitly at every turn, is made more grievous by the denial of social equality to himself and his people. In the urgency of this note is there not possibly a lack of the profoundest self-respect? If Mr. Du Bois can sit with Shakspere and Plato, and they do not wince at his complexion, why should he care so much for the contempt of Col. Carter of Cartersville? Why not trample on it with a deeper pride? A society based on money values may reject such a man as scornfully as one based on the tradition of slavery, but a society based upon character and culture will always welcome him though he were blacker than the ace of spades, not as showing him a favor, but as anxious to avail itself of his ability.

Dictionary of Philosophy and Psychology. By James Mark Baldwin. Vol. II. The Macmillan Co. 1902. Royal 8vo, pp. 892.

Many evidences of different kinds reach us of the good service that this work is already rendering, notwithstanding the imperfections inevitable in any such composite book, and notwithstanding its lack of those formal perfections and uniformities upon which our American dictionaries and cyclopædias are apt to insist to the neglect of the weightier matters of the law, to the point of leaving them dry, innutritious, and unvitalizing. Professor Baldwin, in the preface of this concluding volume (of the Dictionary proper), puts forth more an excuse than a defence for one of the few features of it that have been disapproved in almost every quarter; urging that the diminutive biographical notices which he has scattered through the vocabulary are that half-loaf that is said to be better than no bread. This hardly meets the stricture commonly made, which was to the effect that the entire omission of these supererogatory crumbs would have left room that might either have been filled to better purpose, or to better purpose have lightened the avoirdupois of the volumes.

But a more interesting question suggests itself. Upwards of seventy of the most reputable philosophers whose services a distinguished editor could secure, have here set down their opinions upon the special points of philosophy of which they are reputed best qualified to treat. They have not argued their doctrines, since this is a dictionary, not a cyclopædia; but they have defined them. All the principal groups of schools are more or less represented in the assemblage of contributors; even the idealists, whose showing is probably the least adequate. One naturally peruses their utterances to see what impression one can derive from them as to the prevalent tendencies of philosophy at the opening of the twentieth century; for surely this is an aspect under which it may be hoped that this dictionary will never lose its interest.

The most prominent of the philosophical signs of the times, as here displayed—so it strikes us, at least—is the manifest strenuous endeavor of the students of every department of philosophy to impart a "scientific" character each to his own particular branch, *i. e.*, to make it conform to the conditions which have caused the success of the modern acknowledged sciences. The progress is satisfactory. At least one branch of psychology has already taken its place among the special sciences, whose array others are well upon the way toward joining. The movement is not confined to psychology. There is much of a scientific character in ethics; and the critical part of logic has, in some hands at least, come to submit itself to the same criteria as those that have long been acknowledged in science. There seems every reason for hope concerning metaphysics and other branches.

Another mark of our philosophy is the disposition to make psychology the key to philosophy — categories, æsthetics, ethics, logic, and metaphysics. Something of this has existed since Descartes; but since about 1863 every student of philosophy, even though he be one of those who consider the present psychological tendency excessive, has placed a new and higher estimate than before upon the scientific value of psychology. Here was seen one science, than which no branch of philosophy, in the days when men disputed about the *primum cognitum*, was more enveloped in metaphysical fog, which yet almost suddenly, that mist lifting, had come out bright and clear as a June forenoon. How could it but happen, as it certainly did, that men should think that the best way to resolve any problem of philosophy would be to reduce it to a question of psychology? The future must determine precisely what the value of this method may be. It has its opponents. For some years after the movement once became general, no strong voice was raised against it; and ten or fifteen years ago psychologists of the first rank could dream of establishing the truths of their science without any metaphysical assumptions whatsoever. Some writers use such language even yet; but careful examination has convinced the better part that even physics has its metaphysical postulates, and that psychology is peculiarly dependent upon them. If that be the case, the philosophical sciences and psychology would have each to be built upon the other, if the psychological method is to be maintained. They must collectively form an arch—or, rather, a Saturn's ring, for an arch has the ground to rest upon. Whether that can be sound logic or not is a question to be carefully examined.

Another symptom of the philosophy of the day which is interesting to the general public is a very appreciable reaction against the whole family of opinions that are nearly related to agnosticism—some of them as little fond of others as any cousins in the world. A logical scruple seems to be the motive of this reaction. It is felt that the only possible justification for so much as entertaining a hypothesis must be that it renders the facts comprehensible, and that a theory which substantially amounts merely to supposing facts to be incomprehensible, fails to render any facts comprehensible. But if one once admits this, he can hardly stop at this point. It would seem that his further reflections must result in something like a resuscitation of the Scotch philosophy of common sense. Accordingly, some writers who used (justly or otherwise) to be regarded as skeptics, are now instancing the stress put upon the light of nature by Galileo and other authors of modern physical conceptions, and virtually even by Faraday, Kelvin, etc., as helping to show that a belief akin to Reid's is an essential condition of progressive science.

One other lineament of contemporary philosophy is called to our attention in turning over the leaves of this volume. It is surprising to see how readable it is—a result due, no doubt, in part to editorial skill, and partly to the writers not having to enter into all the details of argumentation. It is infinitely more agreeable to read than any of the recent philosophical works which betray literary ambition. Metaphysicians are a slow-thinking breed; but they seem duller than ordinary not to perceive that a literary style in philosophy is an incongruity whose days are numbered. Soon the majority of contributions to philosophy will begin to take the form of memoirs, like those to other sciences, such as mathematics, which is no more special than is philosophy. Now a scientific memoir written in any but the most severely unadorned language could not be more ridiculous if it were set in hexameters like the contributions of those eminent savants Parmenides, and Empedocles. It is a truism to say so; and this truism enwraps another, which is that there is such a thing as a good style and a bad style for philosophy grown science. A good style is one which approximates as closely as possible to a self-explaining diagram or a tabular array of familiar symbols. In short, it will be necessary for philosophers to awake to the fact that there is such a thing as the ethics of words, which for them should be about the most sacred part of the moral law; and the sooner they begin to turn their attention to this, the sooner they will experience the satisfaction of the scientific man's conscience, who is faithful to his duty of gathering premises as the basis of inferences which only distant generations can draw, and in drawing will first discover what scrupulous pains have been taken to make those premises accurate.

The Groundwork of the Leschetizky Method. By Malwine Brée. G. Schirmer.

Die Hand des Pianisten. Von Marie Unschuld von Melasfeld. Breitkopf & Härtel.

For nearly half a century Franz Liszt devoted a considerable part of his time to giving free instruction to young pianists. This accounts for the enormous number of his "pupils" up and down the world; a list of them takes up six pages of Göllerich's biography of the great pianist. But Liszt died in 1886, and the young women and men had to look about for another instructor. Rubinstein never took many pupils, and died, moreover, eight years after Liszt. The great successor of these masters, Paderewski, has had no time to give lessons; but it so happened that in the days of his youth he was a pupil of Leschetizky, and when he became leader among the pianists of our time, students began to flock to his teacher, in the hope of discovering the secret of his success. Thus it came about that Leschetizky became the successor of Liszt as a teacher of nearly everybody who is anybody among the younger pianists. His house in Vienna is frequented by a vast number of young students, most of them foreigners, particularly Americans; the Viennese, indeed, speak of his "American colony" at Währing. In many things Leschetizky is unlike Liszt: he charges for his lessons and he teaches technique, two things which Liszt never did. He resembles Liszt in being a genuine artist; a mere pedagogue could not have got and retained his vogue.

Leschetizky never published a "method" for the use of his pupils and others; but lately two of his pupils have endeavored to put on paper some of his most important principles of instruction. Neither of the books mentioned at the head of this review contains anything to indicate that his method differs radically from that of other eminent teachers; and both are somewhat disappointing because they do not include detailed criticism of individual composers and pieces in the teacher's own words, after the manner of Theodor Pfeiffer's delightful 'Studien bei Hans von Bülow. But there is much of genuine value in both the books. They resemble each other in having abundant illustrations of hand postures; Leschetizky's own hand having been photographed for Mme. Brée's book (which has been admirably Englished by Dr. Theodore Baker), while Mme. von Melasfeld adorns hers with pictures of her own hand in various positions. What will our young ladies say to Mme. Brée's assertion that "the pianist must renounce the so-called aristocratic hand, slender and gracefully formed, with well-kept nails"? To which she adds that "a thoroughly trained 'piano-hand' becomes broader, supple in the wrist, and muscular, with broad finger-tips." The same writer does not hesitate to declare that "the pedal, for most good people and bad players, is an instrumentality for trampling on good taste." Mme. von Melasfeld quotes Rubinstein's saying that "good pedalling is half the play." Her instructions on this topic are particularly clear and suggestive, and so are her remarks on memorizing pieces of music. They are summed up in the words, "Play less, think more." It may be added that there are plentiful illustrations in musical type in each of these books, and that both are commended by Leschetizky himself.

Heredity and Social Progress. By Simon N. Patten. Macmillan Co. 1903.

The conclusions reached in this book differ from those previously maintained by the author because he has altered his premises. Formerly he thought that if life were freed from its restrictions, we should have "a pleasure economy, and a normal order of progress. The natural curve of thought would move from concrete economic events upward to its highest forms." Reflection suggested that this concept overlooked the influence of heredity. "Character, in the sense of inherited traits, has its curve of thought." Thought, then, must have two curves, and nothing is normal until it reveals the movements of both. Further reflection has convinced the author that the normal is to be sought in a new direction. He now perceives that it is fallacious to suppose that nations have a period of youth, maturity, and old age. "Death is an accident to life, not a necessity." Emotional changes must be recognized; and "thought must therefore have an emotional as well as an economic curve."

For the development of these theories the author has prepared a logic of his own, some of the canons of which are as follows: "The presumption of a general law is in favor of a hypothesis as soon as single instances of its operation are discovered." "Links missing in the verification of a chain of reasoning do not render a hypothesis improbable." "Whenever a specific form is found, variations from this form may be assumed." "A law having parallel expressions in two fields has greater validity than a complete induction in one field." It is speaking within bounds to say that natural science has not employed canons so loosely expressed, and that this *novum organum* may be perverted by mischievous or weak-minded persons unless it is carefully explained and guarded.

When man is considered in his relations to nature, continues our author, he is found to face a law of diminishing returns. Since the natural surplus produced by conscious effort falls off, it cannot be a source of social progress. To make progress secure, the temporary surplus must be transformed into permanent conditions, or into mental traits; it is the latter that constitute the real source of progress. So in biology, acquired characters become natural; and biology and economics are parallel, like mind and matter. Economics, therefore, may be comprehended through biology, and the bulk of this essay is biological in character. Conscious acts precede those that are unconscious, and this is the order of nature, and must prevail in lower life. Acquired characters are not inherited; but they cause children to develop increased energy, and hence progress results. The same is true of organs. The tooth, the nail, the wing, etc., are at first merely expressions of surplus energy. "Animals do not develop teeth because they eat hard food. They eat hard food because they have teeth. Nor do they develop hair because they go into cold regions; they go north because they have hair." But as progress is due to surplus energy, arrest of development comes from emotions, which, however, may aid those who change their environment. The explanation of these statements occupies too much space to be adequately discussed here. Reduced to a simple form, the theory here adumbrated appears to make progress begin with the creation of a "social surplus," while "current biology and classical economics unite in making a deficit the initial force in progress." Prosperity creates energy, adversity lessens it. But progress is blocked unless the strong protect the weak. "The initial step in progress is protection, and a flow of income from the strong to the weak." Hence, a backward race or class need not be radically altered to fit it for civilization. Provide a surplus, and spontaneous changes will reorganize society.

There are many Delphic utterances in this book, and it can hardly be called well reasoned. Nevertheless, we can heartily approve the spirit of a disquisition which contains these precepts: "The more freely we give to the weak, the more is gained by the strong. The morality of similar men is embodied in the Golden Rule, but for dissimilar men the law of service is yet higher. Do unto those unlike yourself what they cannot do for themselves. Let your surplus energy go out through your natural character for the benefit of those who have it not."

Life and Letters of Brooke Foss Westcott, D.D., D.C.L., sometime Bishop of Durham. By his son, Arthur Westcott. 2 vols. Macmillan & Co., 1903.

Certain episcopal biographies of recent years appear to have been written chiefly to show that bishops are men of like passions with others. The present memoir suggests no such explanation, for the whole of its subject's career was spent outside that atmosphere of diplomacy and intrigue in which too many princes of the church appear to breathe most freely. Westcott, though he occupied for more than a decade one of the most exalted positions in the English hierarchy, will not be remembered especially as an ecclesiastical dignitary, but as a scholar and teacher. His earliest aptitudes, shown when a boy at King Edward's School, Birmingham, marked him out for distinction as a student. At Cambridge he was Senior Classic, and swept the board of the various classical prizes and scholarships. At the same time, lest his studies should be "selfish," that is, too directly aimed at prize winning, he made a point of working also at botany, geology, architecture, and other subjects. This breadth of interests does not reflect itself in the letters of this period, which are pietistic in the extreme.

It was during the years spent as assistant-master at Harrow (from 1852 to 1869) that Westcott's abilities as a critic and expositor of the New Testament text began to be generally recognized. Dr. Butler, then head-master, testifies that Westcott became a real power in the school, where his house was pre-eminent for its intellectual and general vigor. For himself, however, he found teaching schoolboys too exhausting to be combined with the studies on which his heart was set, and he was glad of the relief afforded him by an appointment to a Cambridge chair. He was more at home in lecturing to candidates for holy

orders, though his belief in the scholarship of his pupils was sometimes too much for their self-control. Canon Scott Holland, for instance, recalls his disappointment at their not recollecting the use of a certain verb in the Clementine Homilies, whereas at the moment they had but the dimmest conception of what the Clementine Homilies might be. Cambridge, too, gave him an opportunity of closer association with Lightfoot and Hort. He had begun his collaboration with Hort on a recension of the New Testament text as early as 1853, when twenty-eight years of age. Comparatively little is told us here of this great undertaking, as the biographer prefers to leave the mass of correspondence affecting it to be dealt with later by a specialist; but, amid all the changes in Westcott's outward career, we are conscious of his steady, persistent devotion to this task until the book is given to the world in 1881. One's admiration of his labors is increased by the discovery that they were not in every respect congenial. "Generally," he remarks in one of his letters to his colleague, "I feel very great repugnance to the whole work of revision. . . . I cannot express to you the positive dislike—I want a stronger term—with which I look on all details of spelling and breathing and form." In another letter he says, "Grammar I simply hate."

After 1890, when he was made Bishop of Durham, Westcott made few contributions to scholarship. At the same time his scholarly training and habits made his new activities as a preacher and church leader differ widely from those of the average bishop. It is significant to read of his sermons and addresses during this period, (which often produced a unique impression), that they were a terror to the reporters, not because of rapidity of utterance, but because the thoughts were expressed in unfamiliar phrases. Westcott took, we learn, no delight in generalship. He felt so burdened by responsibilty that when a diocesan living fell vacant he would feel greatly relieved if he found from the calendar that the patronage was not in the bishop's hands. Yet his sense of duty was so keen that on occasion he would seek responsibilities from which most men in his position would think themselves excused. Such an occasion was the painful miners' strike of 1892, when his intervention brought the conflict of employers and employed to an end. This was but one of many services rendered to industrial concord and social progress which justified the application to him, in a chapter contributed by Thomas Burt, the miner M.P., of the title of "Everybody's Bishop." He had, indeed, been true to his consecration vow to maintain and set forward, as far as in him lay, quietness, love, and peace among all men.

BOOKS OF THE WEEK.

Broome, E. C. A Historical and Critical Discussion of College Admission Requirements. (Columbia University Publications.) Macmillan.
Cairns, John. Principal Cairns. (Famous Scots Series.) Scribners. 75 cents.
Cartwright, Julia. Isabella d'Este, Marchioness of Mantua, 1474-1539: A Study of the Renaissance. 2 vols. E. P. Dutton & Co. $7.50.

My Relations with Carlyle

By JAMES ANTHONY FROUDE

Together with a Letter from the Late Sir James Stephen, Dated December 9, 1886

AS publishers of Froude's books on the Carlyles, we have received from London this statement, prepared by Mr. Froude himself and found after his death among other papers. The publication was decided upon by Mr. Ashley A. Froude and Miss Margaret Froude only because, as they state in a prefatory note, "the production of the 'New Letters and Memorials of Jane Welsh Carlyle' with the serious charges contained in the Introduction and Footnotes" seemed to them to demand it. To the pamphlet, which throws new light on the relations of the Carlyles, is appended a letter to Mr. Froude by his co-executor of Carlyle's will, Sir James Stephen, which recounts the history of the controversy in explicit detail and wholly justifies Mr. Froude's course.

75 cents *net*

(A NEW VOLUME IN THE INTERNATIONAL CRITICAL COMMENTARY.)

A Critical and Exegetical Commentary on Numbers

By GEORGE BUCHANAN GRAY, M.A., D.D.,

Professor of Hebrew and Old Testament Exegesis in Mansfield College, Oxford. Crown 8vo, with Map, $3.00 *net.*

It is thirty-five years since the English translation of Keil's Commentary on Numbers appeared and no English commentary published since possesses any independent value. Keil's interpretation started from a standpoint which was at that time professedly conservative and which the advance of scholarship in the interval has shown to be untenable.

Even since Dillman's Commentary appeared in 1886 standpoints have changed and knowledge on many special points has increased. It is unnecessary to say more to indicate the need for a new English commentary. The aim of the present commentary is to enable the reader to look at and interpret the "Book of Numbers" from these new standpoints.

The Book of Ser Marco Polo, The Venetian

CONCERNING THE KINGDOMS AND THE MARVELS OF THE EAST

Revised throughout in the light of Recent Discoveries

By HENRI CORDIER

With maps and many illustrations. 2 vols., $16.00 *net.*

This thorough revision of Marco Polo's celebrated travels is based upon the original translations of Colonel Sir Henry Yule, R.E., C.B., K.C.S.I., LL.D., President of the Royal Asiatic and Hakluyt Societies, and contains also a memoir of Yule, in the compilation of which Professor Cordier had the assistance of Amy Frances Yule.

A Literary History of Scotland

By J. H. MILLAR, author of "The Mid-Eighteenth Century"

This important work, constituting a new volume in the "Library of Literary History," covers the field from early Scots poetry, 1301, to the close of the Victorian era.

With photogravure frontispiece of Sir Walter Scott. $4.00 *net.*

THOMAS NELSON PAGE **Gordon Keith**

This novel, of which 50,000 were printed for a first edition, has immediately attained a very wide popularity

AUBURNDALE, MASS.
A school of the first class for young women. Gives thorough training in a liberal arts course planned wholly for young women, adding its specialty of Household Economics. Boston Masters in Music and Art. Annex Department of household practice a decided success. For catalogue, address
C. C. BRAGDON, Principal.

St. Agnes School.
34th Year. Albany, N. Y.
Miss Seabury, Head of the School.
Rt. Rev. W. C. Doane, LL.D.,
President of the Trustees.
Situation high, central, healthful. Large building remodelled. Single bedrooms. New chemical and physical laboratories. Preparation for Radcliffe, Bryn Mawr, and other colleges. Additional year needed for St. Agnes diploma. Regular exercise under careful supervision required. Outdoor sports. Catalogue sent if desired.

Miss Baldwin's School for Girls.
Preparatory to Bryn Mawr College.
Bryn Mawr, Pa. Within 12 years 166 pupils have entered Bryn Mawr College from this school. Diploma given in general and College Preparatory Courses. Fine fire-proof stone building, 25 acres of beautiful grounds. For circular, address the Secretary.
Florence Baldwin, Ph.B., Principal.
Jane L. Brownell, A.M., Associate Principal

THE JONES SUMMER SCHOOL
Of MATHEMATICS and the LANGUAGES.
NINETEENTH SESSION, July 6—September 18.
Rapid reviews for candidates for admission to CORNELL UNIVERSITY and for conditioned students.
Address GEO. W. JONES, A.M., ITHACA, N. Y.

WABAN SCHOOL, WABAN, MASS.
A superior preparatory school for boys.
J. H. PILLSBURY, A.M., Principal.

Educational.

HARVARD UNIVERSITY
EXAMINATION FOR ADMISSION
Will be held in New York City, in the West Side branch Y. M. C. A., 318 West 57th St., and in Newport, R. I., in the Rogers High School Building, June 22 to 27, inclusive.

RADCLIFFE COLLEGE
EXAMINATION FOR ADMISSION
And the Harvard Examination for women will be held in New York City and Newport, R. I., at the places and time as stated above for the Examination for admission to Harvard University.

Clark University
SUMMER SCHOOL
WORCESTER, MASS.
July 13-25, 1903.
Courses in Psychology, Biology, Pedagogy, Anthropology, and Neurology. For circulars and further information address
LOUIS N. WILSON, Clerk.

New York University SUMMER TERM July 8th— August 15th.
Greatly Enlarged. Address SECRETARY, University Heights, New York City.

WILDMERE FOURTH SEASON
A boys' camp in the SEBAGO LAKE REGION, MAINE.
Eight weeks of outdoor life with the comradeship of college-bred leaders and high-grade boys. Send for illustrated booklet to IRVING L. WOODMAN, Ph.B. Friends School, Providence, R. I.

ROGERS HALL SCHOOL
For Girls. Certificate admits to Smith, Vassar, Wellesley, Wells, Mt. Holyoke. Beautiful grounds. Golf, Basket Ball, Tennis, Field Hockey.
Mrs. E. P. Underhill, M.A., Prin., Lowell, Mass.

The Highland Military Academy
Worcester, Mass. 48th year. Best sanitation, high scholastic standards. Military training with home care. Well-appointed laboratories. Visitor: The Rt. Rev. Alex. H. Vinton, D.D. Head Master: JOSEPH ALDEN SHAW, A.M.

The Browne and Nichols School
Cambridge, Mass. For Boys. 21st year. Course, 8 years. Classes limited to 15. Pupils continuously under head teacher in each department. Exceptional facilities for fitting for Harvard. Illustrated Catalogue.

THE LEE SCHOOL.
9 Channing Street, Cambridge, Mass.
Miss M. L. KELLY, Principal.

The Quaker: a Study in Costume
King Charles I. of England wore Quaker costume when posing for the well-known portrait by Vandyke. The beautiful Miss Fitzgerald, lady-in-waiting to Queen Caroline, also wore garments of Quaker cut. In both cases the Quaker element entered after the event, i.e., styles once worldly became Quaker by adoption.
The origins and transmutations of Quaker costume are entertainingly explained and freely pictured in this beautiful volume by AMELIA M. GUMMERE. 8vo, half ooze-sheep, 240 pages, 75 illustrations, $3.00.

CHARACTERISTIC PICTURES IN FASCINATING VARIETY

The Latest New Novels

PUBLISHED BY THE MACMILLAN COMPANY

A KENTUCKY LOVE-STORY OF A HUNDRED YEARS AGO

By **NANCY HUSTON BANKS**

Round Anvil Rock

Not in the least a conventional historical novel; all its mystery, misery and happiness are centred in a love-story, stronger but no less exquisite than *Oldfield*. *Cloth, $1.50*

EPISODES IN THE LIFE OF A EUROPEAN GHETTO

By **MARTHA WOLFENSTEIN**

Idyls of the Gass

The incidents in its last chapters involving a charge of ritualistic murder portray events and a state of public opinion curiously paralleled in the recent disturbances at Kishineff.

Cloth, $1.50

FROM THE EXPERIENCE BOOK OF A COMMUTER'S WIFE

BARBARA'S *comments on New York society*

People of the Whirlpool (Manhattan)

A "deliciously entertaining," wholesome and kindly discussion of some of the diverting ways of New York Society from the safe vantage point of the "commuter's wife."

Illustrated. Cloth, $1.50

THE TRAGEDY OF A CANADIAN VILLAGE GIRL

By **GWENDOLEN OVERTON**

Anne Carmel

It is as unconventional in its dominant love interest and as intensely absorbing as was her *The Heritage of Unrest*.

Cloth, $1.50

A MEMORY OF THE BLACK BELT FIFTY YEARS AGO

By **WILLIAM GARROTT BROWN**

A Gentleman of the South

It is a story of unusual dramatic force, charged with passion, and told with delicacy and restraint. The whole decoration of the book is in rare sympathy with its subject.

Illustrated. Cloth, $1.50

LOVE AND FIGHTING IN THE MEXICAN EMPIRE

By **GEORGE CRAM COOK**

Roderick Taliaferro

It is dramatic, thrilling and emphatically a good story of love and adventure. *Illustrated. Cloth, $1.50*

Little Novels by Favorite Authors

"A sort of tonic to the weary," "intensely human and eminently satisfying," "short but exciting," "mighty entertaining," are a few of the comments on the three volumes of this series already published.

Each illustrated, cloth, 18mo, 50 cents.

New Books on Philosophy Just Ready

By JOSIAH ROYCE, Ph.D., LL.D.
Professor of the History of Philosophy, Harvard University.

Outlines of Psychology

An elementary treatise with some practical applications presupposing a serious reader, but not necessarily one trained in either experimental methods or philosophical instruction.

Cloth, 8vo, $1.25 net (postage 12c.)

By C. A. STRONG
Professor of Psychology, Columbia University.

Why the Mind has a Body

355 pages, 8vo, Cloth, $2.50 net (postage 16c.)

This book seeks to settle the much-debated question, whether the mind is a cause or merely an accompaniment of brain-changes, by means of an hypothesis as to the ultimate mode of connection of mind and body.

By WALTER T. MARVIN, Ph.D.
Asst. Professor of Philosophy, Western Reserve University.

An Introduction to Systematic Philosophy.

Cloth, 12mo. $3.00 net.

A statement and attempt at the solution of such questions in philosophy as exist as problems to-day.

Capital Out-Door Books

Athletics and Out-Door Sports for Women

Each subject being separately treated by a special writer, with an introduction by LUCILLE EATON HILL, *Director of Physical Training in Wellesley College.*

Cloth, 12mo, with over 200 illustrations. $1.50 net. (Postage 20c.)

A Woman's Hardy Garden

By HELENA RUTHERFURD ELY

Third edition, illustrated, Cloth, $1.75 net. (Postage 13c.)

"Really practical . . . and a book to be welcomed with enthusiasm."—*New York Tribune.*

Trapper "Jim"

By EDWYN SANDYS, *Author of "Upland Game-Birds."*

Fully illustrated. Cloth, $1.50 net. (Postage 13c.)

Every man who sees it will be trailing new game—a boy with whom to enjoy it. Every boy will be utterly absorbed from the first page to the last.

On net books ordered from the publisher carriage is an extra charge; they are for sale by all dealers at net rates.

The Nation.

NEW YORK, THURSDAY, JUNE 18, 1903.

The Week.

On June 10 the Federal grand jury at Montgomery asked Judge Jones of the United States Court for a construction of the act of the Alabama Legislature known as the Criminal Contract law. It is partly under the provisions of this statute, enacted in the session of 1901-1902, and cunningly designed to operate solely against ignorant and friendless negroes, that a great deal of the iniquity has been practised. It is entitled, an act "to punish any person who has contracted in writing to labor or serve for any given time . . . and who, before the expiration of such contract and without the consent of the other party, abandons such contract," etc. This is the statute which Judge Jones decided yesterday to be in conflict with the Federal Constitution, and therefore null and void. How great a blow this will be to the defence in the peonage cases will be understood by any one familiar with the method pursued in reënslaving the negroes. Arrested and fined, often illegally, for trivial offences, they are then "sold" as convicts. The purchaser goes through the form of making them sign a contract for a year's labor—or for two or three, as the case may be. They agree to work as directed, consent to be under armed guards, and to be locked up at night, and to submit to whatever discipline their employers (or owners) may see fit to inflict. Any impartial court would hold, we suppose, that all such contracts, manifestly made under duress, were invalid. But Judge Jones has gone further and struck at the Criminal Contract law itself. This he declares unconstitutional, as being in conflict with the Constitutional guarantees against imprisonment for debt. The result can only be to weaken if not destroy the defence which the Alabama slave-drivers expected to set up, and to make the prospect of conviction brighter.

The decision by the Supreme Court of Tennessee that the "Jim Crow" car law of 1903 is unconstitutional, ends one attempt to force a street car company to discriminate between blacks and whites. The Memphis *Commercial-Appeal* says that the law was conceived under circumstances "which had best not be related at this time," that it was "almost surreptitiously hurried through the Senate of the last General Assembly," and that it is now declared "invalid, illogical, unjust, and unconstitutional." There was strong opposition to the bill in Memphis, not because of any dislike for the principle involved, but because it was certain to work hardship to the travelling public, particularly as the bill called for a division of the cars, and not for separate ones for blacks and whites. The company never attempted to obey the law, and was warned by white people that if it did its officials would be enjoined. The matter was finally tested by two citizens asking for the indictment of the officials for failure to enforce the law, which resulted in a fine of $200. The Supreme Court remits the fine and quashes the indictment. So sweeping is the victory that there is a general belief that the subject will be let alone for some time to come. In the few places where the Jim Crow law has been applied to street cars, it does not work well from any point of view. The head of the New Orleans railways was, we believe, recently fined for failure to obey the law. One of the main obstacles to its extension is the increased running expenses involved. In the South, as elsewhere, racial prejudices usually disappear when to insist upon them means that the "superior" race will be out of pocket thereby.

New definitions of "business" are offered every day. Whenever Walking Delegate Parks said to his callers, "Now talk business," he meant, "Now produce your bribes." Much the same idea of practical affairs seems to have pervaded the gang of post-office thieves. The evidence taken at Baltimore on Thursday was highly significant. When the innocent contractor proposed to furnish to the Government for 60 cents mail pouches which cost him 35, the purchasing agent at once indignantly remonstrated that there was no "business" in that. "Take my advice and put in a bid at 90." Said and done, and the 40 per cent. "rake-off" to the agent was the fit reward of his talent. But the transaction was only sneak-thief robbery compared with the illustrations of the same principle in 1898. We were credibly informed of one shipowner who wanted to sell some vessels to the Government for $1,250,000, but was told by the official go-between that he might just as well ask $3,000,000. He declined to go into the fine speculation, apparently believing that, though Tacitus called money "the nerves of war," it required too much "nerve" to rob the Government of so great a sum.

Things are indeed coming to a pretty pass in the postal scandals when both Mr. Thomas C. Platt and the Grand Jury are credited with a sudden interest in the developments in the New York Post-office. We are not so base as to join some of our contemporaries in believing that Mr. Platt's trip to Washington was solely for the purpose of preventing a further inquiry into Mr. Van Cott's office in order to protect the local Republican machine from certain revelations bound to come if there were a careful investigation. No, indeed. We firmly believe that Mr. Platt went to tell Mr. Roosevelt that his machine had nothing to fear from the most relentless probing into its relations with the post-office, and that he hoped no guilty man would be allowed to escape. It will make no difference to his fearlessly upright soul whether it is or is not shown that Perry S. Heath approved the violation of the civil-service laws which made possible the appointment of Postmaster Van Cott's son. Mr. Heath, by the way, is beginning to deserve the title of the "ever-present Mr. Heath." Probe into the office of the Attorney-General for the Post-office and Mr. Heath bobs up serenely. Look into Mr. Machen's charges, and behold, you run across Perry Heath. Investigate the allegations in regard to the Salaries Division, and there is our brave Mr. Heath once more. Even in New York as well as in Cuba and Porto Rico, the far-reaching influence of this peerless Indiana statesman apparently made itself felt.

Fresh revelations regarding the walking delegate, Parks, tend to contradict his statement that the money he extorted from the Hecla Iron Works was used by him to compensate the workmen for their lost time; but even if he had used it for that purpose, the crime would have been the same in the eye of the law. A strike had been ordered by Parks on the ground that the works had non-union men in its employ. That was a false charge: there were no such men in the company's employ. When this was proved so that Parks himself could no longer deny it, he demanded pay for the time the men had lost while the investigation was going on. Obviously, Parks himself was the person to make good this loss to his followers, because he was the one who had caused it, but he had a club in his hands with which to enforce his orders, and he used it. This was blackmail. In contemplation of law, it was extortion. It was immaterial whether the Hecla people had non-union men in their employ or not. It made no difference whether Parks divided the money with his underlings or not. If he turned it over to the treasurer of the union it could be recovered at law, and all the parties who received it knowingly, whether in a

fiduciary capacity or otherwise, would have been guilty and liable to punishment. As Mr. Jerome says, it would help Mr. Parks's case in its moral aspects if he had turned the money over to the men, but his liability to the penalties of the law would not have been lessened thereby.

To continue the lockout in the building trade until the unions give evidence of complete reformation is merely good business. This action puts the unions where they belong—on the basis of corporations or individuals whose commercial credit is bad. With such customers a prudent concern deals strictly on a cash basis, refusing long contracts and extended credits. Similarly, the contractors would be foolish to come to any permanent agreement with ill-disciplined bodies and their corrupt officials. Organized labor cannot complain of being treated according to its works. In fact, such an attitude as that of the Employers' Association should be welcomed by unionism generally; for the present lockout is accompanied by the statement that the employers have no other expectation than to deal indefinitely with labor unions. All that their action amounts to is simply a challenge to the demoralized unions of the building trades to purge themselves of corrupt and frivolous practices, and to assume the responsibility properly exacted of all who have large business operations in charge. It is clear that those unions which, accepting the challenge, offer, instead of the old sentimental plea for labor's rights, the inducement of proved honesty and common sense, will be greatly the gainers.

The tremendous flood losses in the valleys of the Kaw, Des Moines, and lower Missouri Rivers ought to awaken the people of the West to the magnitude of the problem confronting them. The destruction of property running into tens of millions, together with the hundreds of fatalities accompanying the mad rush of waters, teaches a lesson that should not be forgotten. Though the floods wrought desolation throughout a wide territory, extending as they did from central Kansas to the Mississippi far below St. Louis, they had but one origin. Like conditions of rainfall prevailed over all their different sources, widely separated though they were. It is estimated that fully $30,000,000 will be needed to replace the ruined structures, the railway bridges, the manufactories, and dwellings—not to mention the crops destroyed or badly damaged. The West does not often have such a flood as this, but it does have floods nearly every year—these overflows alternating, apparently, with periods of drought that are far more destructive in property value, though, of course, not attended by the element of personal danger. The amount of this one season's loss, spent in the conservation of the natural rainfall in the prairie region, would go far to prevent floods. The configuration of the sharply sloping plains, while it lends itself to the rapid accumulation of a vast tide of flood water, is also favorable to its impounding. An early effort should be made, beginning with the country at the foothills of the mountains, and extending through the entire arid and semi-arid belt on the eastern slope of the Rockies, to catch the water in reservoirs and canals in such a way that even the deluge of the past fortnight could be held, and its force distributed through many days or weeks. Furthermore, the impounded waters might be used for irrigation, thus adding to the wealth of the localities where it is most needed. This question of the control and utilization of the natural waters is now upon the country.

In a review of the wool trade, for the annual report of the Chamber of Commerce, Mr. Louis Windmüller draws attention to the fact that the price of carpet wool has been rising during recent years, in consequence of the great demand for carpets in the United States. These wools are not and cannot be produced in this country. The supply comes mainly from Turkey, India, China, and other half-starved countries. The Dingley tariff provides that wools costing not more than 12 cents per pound at the place of exportation shall pay a duty of 4 cents per pound, or 33 per cent., ad valorem. If valued at more than 12 cents per pound, the duty shall be 7 cents per pound, or about 60 per cent. ad valorem, Hence it comes to pass that whenever the demand for carpets carries the price of the raw material above 12 cents, the Government advances the duty to almost double the former rate. And this is by way of encouraging manufacture and protecting American labor! There ought not to be any duty on these wools, or on any wools for that matter; but if there is to be such a duty it ought not to increase merely because the foreign price rises.

With all Senator Lodge's eminent ability, he lacks fervor and conviction as a eulogist. Readers of his praise of President Roosevelt in the Boston *Post* will not fail to note that the phrases are cold and perfunctory. To say that when President McKinley was snatched away from "important duties then unsettled," Roosevelt "continued that policy," is perhaps an infelicity due to the reporter; to add that the President has not "disturbed conditions," is at best negative praise, and we can imagine that the author of the anti-Trust campaign will hardly desire such a certificate of innocuousness. Trying to warm up, Senator Lodge remarks: "I have seen many Presidents in my time and numerous candidates, but President Roosevelt is the most wonderful of them all, in my experience"—with more to the same purport. Of this nothing is to be said except that it lacks the lyric cry. To realize its inadequacy, one has only to imagine the situation reversed, and the President praising Lodge. What colloquially affectionate, perhaps genially profane phrase Mr. Roosevelt would have found for the man who admits that he is the President's closest friend, we dare not imagine, but this is certain, that no *raison d'état* would have tied him down to the academic frigidity of the junior Senator from Massachusetts. All of which goes to show that there are diversities of gifts, and that the simple geniality which a laudator of President Roosevelt should command is not compatible with supreme ability at pulling convention wires and strangling infant treaties in the dark.

Following closely upon the organization of a General Staff for the army comes the proposal of a similar body in the navy. In that service the need of such a staff has by no means been as urgent as in the army. In the latter the bureau chiefs were until lately appointed to hold office until death or retirement. In the navy they are selected for a period of four years, and, acting together, have of themselves formed a General Staff which showed its usefulness and foresight in the war with Spain. But the navy now seeks another arrangement, not being satisfied with the addition of a General Board, over which Admiral Dewey has presided for three years, or with a board which deals with the construction of vessels and their armament. The new plan is an unwieldy one, yet it retains the principle of centring responsibility upon one officer, who, like the army chief of staff, is to be the real commander of the navy. The proposal contemplates the retention of the General Board, which is to advise the Secretary on such matters as the country's naval policy, the increase of the fleet, etc., and is also to have a power of revision in connection with war plans. There is also to be an "Executive Committee of the General Staff," whose duties will comprise the formulation of war plans and the direction of all the general staff work. There are to be, in addition to these groups of officers and the chief of staff, chiefs of the three sections into which the General Staff itself is to be divided. Among these sections are to be apportioned the questions of plans and manœuvres, the organization of fleets, and matters of government of the personnel, now chiefly vested in the Bureau of Navigation. The material side of the navy is still to be in the

hands of the present staff bureaus as now organized.

The general effect of the plan, as it presents itself to the lay mind, is one of top-heaviness, and of calling for a large number of cooks to stir the naval broth. It is true that the chiefs of sections of the General Staff figure also as members of the Executive Committee and of the General Board, but the necessity for this board is certainly not apparent. Its advisory functions would seem to belong properly to the General Staff. Hitherto the General Board has been a most mischievous body, being responsible for much loose talk about the numerous ships needed and the necessity for outstripping Germany and other "dangerous" countries. As is the case with the army, the navy General Staff may be either a most useful or a most harmful body. If it confines itself to its proper functions it will doubtless add to the navy's efficiency. If it imitates the General Board, and embarks upon a policy of unlimited naval expenditures so that we may have a fleet calculated to "whip all creation," it is likely to become a nuisance and a serious menace.

The killing of the King and Queen of Servia, along with the Queen's brother and several of the King's Ministers, hardly finds a parallel in countries called civilized except in the later years of the Roman Empire, or in Russia in the century following Peter the Great. It appears that the murders were the work of the army. So it was the Pretorian Guard that ordinarily made away with the Roman emperors, and it was the Russian army, led by its highest officers, that dethroned and killed Peter III. and put Catharine II. on the throne. The recent fantastic doings of the young King of Servia has amused rather than excited the organs of public opinion in Europe, and did not prepare us for his tragic end. Servia has a constitutional government modelled on that of France under the Second Empire, with a Senate and a Council of State in addition to the Skupshtina, or national parliament. This constitution was adopted in 1901 at the instance of King Alexander, but he suspended it, on his own volition, a couple of months ago, long enough to get rid of the legislative body, which was disagreeable to him, and then put it in operation again. Now the first act of the new Government is to proclaim the constitution in full force and to summon Parliament.

Peter, by the grace of massacre and the vote of the new Skupshtina, King of Servia, announces that he will accept the throne, much as he deprecates the means by which it comes to him. That he had anything to do with plotting the murders, he vehemently denies. This may be easily believed. Still, can Christian Powers, it is asked, by recognizing his Government, admit the legitimacy of a régime built upon slaughter? But no such question really arises under international law. The duty of one Government towards a change of rule in another country is exhausted, so far as the matter of recognition is concerned, when it has been ascertained that the latter is securely a *de facto* government. If it holds the capital, has the backing of the army, and exercises governmental functions throughout its territory, then there is nothing for other nations to do but recognize it, no matter if its credentials are blood-stained. We may think what we please, or must, of the new rulers, but if they are the real rulers of the land, then it is with them, officially, that all our public dealings must be had. Even the September Massacres did not make the French Republic any the less supreme *de facto;* and though they shocked the friends of France and of humanity, like Fox and Romilly, did not alter the diplomatic situation. No more can the murders at Belgrade really affect the status of the new Servian Government in the eye of international law.

Mr. Balfour has decided, of two evils, to choose—both. On the one hand there was the mischief of a Cabinet containing members at daggers drawn; on the other, that of a Prime Minister who does not know his own mind on a question of vital interest to the country. Both calamitous conditions are to be preserved, Mr. Balfour says, if enough Conservatives, with the Irish members, will stand behind him to make his Government possible a little while longer on such terms. Office has been said to be an acquired taste, but, once indulged, we see how difficult it is to shake it off. The crisis is smoothed over, for the present, but Mr. Balfour's Government has received a mortal hurt. It has lost prestige irrecoverably, and that is worse than losing votes.

Mr. Chamberlain's preferential tariff ideas got cold comfort in the Lords on Monday. What little could be added to the hostile arguments recently advanced in the Commons was contributed by that veteran financier, Viscount Goschen, who demonstrated cogently that the proposed Zollverein would put the Treasury first under the will of the colonies, next at the mercy of wholly uncontrollable trade movements. Before venturing upon so hazardous an experiment, he urged his party to consider, first, that should protection prove financially disastrous, Great Britain could return to free trade only with the consent of the colonies, while, second, under the proposed tariff especially framed to stimulate importation from the colonies, the very increase of such imports would reduce in equal measure trade with non-British countries—in other words, would greatly diminish the amount of dutiable imports, and hence the Treasury receipts. Aside from Viscount Goschen's neat demonstration of the financial vicious circle into which Mr. Chamberlain is trying to draw his guileless countrymen, the interest of the session was personal, and lay largely in the contrast between the speeches of Lord Lansdowne and the Duke of Devonshire. Lord Lansdowne's attitude was very much that of his chief. With Mr. Balfour, his was the open-minded way. A tariff union would probably plunge the Empire into an embarrassing series of tariff wars, instancing Germany; but then, there were worse things than a show of force. Marching among those who wore revolvers, England might at least buy a revolver and display it. Being interpreted, this meant it was perfectly safe and politic to talk tariff union in the teeth of protectionist nations, and perhaps expedient to continue the talk indefinitely in a Parliamentary commission. Like Mr. Balfour, Lord Lansdowne studiously avoided criticism of Mr. Chamberlain.

German newspapers report another extraordinary occurrence in naval circles at Kiel, where Ensign Hüssner recently murdered an old schoolmate for failure to salute him properly. It seems that two ensigns, while out walking recently, met a crowd of drunken sailors and disorderly characters. Rather than invite trouble by passing them, the officers turned down a side street. A drunken sailor pursued them and struck Ensign Von Abel on the back of his head. The ensign controlled himself, and at once reported the case to his superiors. What was said to him by them is not known. It is a fact, however, that this latest victim of the barbarous Prussian "code of honor" went directly to his rooms and there killed himself. As he was otherwise of excellent reputation and standing, the unavoidable conclusion is that he was censured and reprimanded for his failure to purge his wounded dignity by the use of his sword. It is hardly surprising that, under these circumstances, young officers believe that "blood must flow" whenever they draw their swords, as Ensign Hüssner put it, and that they conceive it to be their duty to use their weapons whenever they fancy themselves insulted. Both Hüssner and Von Abel are to be pitied, for they are the victims of an atrocious system which flourishes because the older officers and the Emperor believe in it. The light sentence given to Hüssner—imprisonment for four years and one week—is fresh proof of this. And it is generally expected that he will be pardoned and allowed to wear the uniform again long before that period is over.

"HIGHER UP."

Postmaster-General Payne, returning from the Hanna wedding, has had to decide how far the investigations into the activities of his private clerk, Mr. Rand, shall go. That he now has ample reasons for such an inquiry is perfectly plain. Mr. Rand, it seems, not only has been interested in selling Mexican mining stock to his fellow-employees, but has also had a purely disinterested connection with a Virginia marble quarry which might be of great value to the Government in its future building operations in the District of Columbia. Unfortunately, there is every inherent probability that Mr. Rand has been "hustling for himself" in the manner indicated. It is a far too common occurrence, and Mr. Payne has another opportunity for public service by probing carefully into the conduct of his friend of thirty years. He has not yet given out Mr. Bristow's report upon the Tulloch charges. Mr. Bristow's findings, it is hinted, will be very interesting reading for Mr. Perry S. Heath. Fortunately for the country, Mr. Bristow is apparently not to be influenced by any party or political considerations. His work in Cuba showed him to be a man of unusual ability and determination. The reports of his activity and remarkable skill in going to the bottom of things are the most refreshing news that now comes from Washington.

Quite the rudest blow yet given to the Postmaster-General's complacency, in the face of the postal frauds, is that delivered by the Civil Service Commission on Saturday. In an official report it more than makes good some of the ugliest of the Tulloch charges—the very ones, in fact, which Messrs. Payne and Heath had treated with the loftiest contempt. With a full array of evidence, specifying names and dates, the Commission declares that the post-office in Washington was stuffed with favorites and incompetents, illegally appointed; in a word, that "the Department used the Washington post-office for political and personal purposes to an extent which left the authority of the postmaster in transfers and appointments but little more than nominal." As if to be perfectly explicit, and to leave no doubt at all where the blame must ultimately fall, the Commission adds that its investigation shows with absolute clearness that "most of the irregularities" were "directed by the Department, or requested or suggested by high Department officials."

Here we have the demand to go "higher up" met with a vengeance! The theory that there were only a few dishonest subordinates at once collapses. There was systematic violation of the law. The very men who were set to guard against what the Commission euphemistically calls "irregularities," were themselves the leaders in irregularity. It seems as if we were plunged back into the days of the star-route scandals, with their famous countersign, "Do this. Brady." The man who gave the orders in the later debauch of the public service was evidently First Assistant Postmaster-General Heath. He was directly charged with violations of the civil-service rules by Mr. Tulloch. It is beyond reasonable doubt that, when the Commission says a high official, it means Heath. His limping and evasive letter of denial really heightened the suspicion under which he rested. The interview with him, in which he deprecated the whole investigation, on the ground that it might implicate "the National Committee," was tantamount to confession. His guilt is made practically certain by the report of the Civil Service Commission. Mr. Tulloch's "hot air," as Mr. Payne called it, with incredible levity, has come to appear something very like the cold truth.

That there was, in fact, a conspiracy, or copartnership, of officials and politicians and Congressmen, to use the Post-Office for plunder, is now pretty clearly established. The official records in regard to the free-delivery routes are telltale. Their words "have fingers," and the fingers point straight to the leading managers of the Republican party. How did it happen that 3,792 out of the total of 11,199 rural routes in the whole United States were allotted to the four States of Ohio, Indiana, Iowa, and Illinois? Can we resist the conviction that there is a direct connection between that fact and the other fact that the most powerful Republican politicians and Congressmen come from those States? These things occurred under the soothing and blessed Administration of McKinley. Ohio was then in the saddle, and that skilled horseman, Senator Hanna, held the reins. It was also the time when Indiana was a power. Perry Heath was not the ingrate who would refuse to do what Hanna asked, or leave his own State out in the cold. Illinois and Iowa had great weight in committee and Cabinet, and weight meant nothing if not a disproportionate share of the spoils. It was evidently a merry time for the corruptionists. The country was too busy freeing Cuba from the corrupt rule of Spain to pay attention to our own Governmental get-rich-quick syndicates. So the work of exchanging personal favors—for such Heath and Machen were accustomed to call their appointments to office—went on at a great rate; Congressmen got money and offices for their local machines; in return they voted larger appropriations and higher salaries for the officials whom they at once bled and fed.

There is no longer any denying that the scandal was one of huge proportions. Its investigation has only begun. It has evidently been taken out of the hands of the nerveless Payne. He is now only a clerk to execute the President's orders. And that Mr. Roosevelt is bound, both by his personal character and his political interests, to tear away every veil that hides a guilty man, is obvious. The frauds had their origin before his accession to the Presidency. Whatever responsibility may rightly be attributed to him for not having unearthed them, will, in the popular judgment, be entirely forgotten if he now makes the work of exposure and punishment unsparing. And he could not stop it now, if he wished. The thing has got beyond suppressing. In self-defence, the Administration has but one course before it—to pull the cover off the cesspool, once for all, and to do the necessary disinfecting with a rough and thorough hand.

As for the rest of us, we must make our rulers, from the President down, understand that such crimes in the public service hurt us and make us angry. They are a national disgrace, which the people must resent. Any man who would excuse or shield a single guilty official or politician, we must make feel the weight of our displeasure. And, for the future, we must all insist, not merely upon a wholesale transfer of the detected rascals from office to jail, but upon new safeguards, new checks upon Congressional greed, new courage on the part of the Chief Executive, which will make the recurrence of the great national shame more difficult, if not impossible.

CURRENCY REFORM BACKWARD.

A financial journal published at Washington city has an article giving an outline of what are supposed to be the views on currency reform of some important banking interests in Wall Street. According to this authority, we need, for the purpose of securing an elastic currency, about $100,000,000 of new national banknotes "resting for security on high-class corporate bonds, and taxed heavily enough to make redemption of the varying issues immediately imperative in times of an excess of currency." The advantages of this scheme would be, says this writer, that "when it was no longer profitable for the banks to keep the issues outstanding, the much-needed contractability would be secured."

The Aldrich bill, which was introduced in the Senate in the last month of the last session of Congress, proposed to authorize the deposit of public money in national banks on the security of certain State, municipal, and railroad bonds. Simultaneously with its introduction, there were rumors in circulation that it was merely preliminary to a more important measure for the acceptance of the same kind of securities for the issue of national banknotes. Of course, arguments for the one might be asserted valid for the other. As the Aldrich bill will probably be reintro-

duced in the next Congress, it may be reasonably inferred that, if it passes, the project outlined in the Washington financial journal will shortly follow.

Before looking at the scientific aspects of this plan, it is worth while to glance at its probable influence on current financial operations—that is, upon the stock market. The first effect of the measure would be to elevate the prices of the securities accepted as the basis of banknote circulation to figures approaching those of Government bonds. This would itself constitute a boom in stocks, but it would have another effect quite as notable. It would clear the market of $100,000,000 or more of securities now held by the investing public, transferring them to the Treasury vaults as security for banknotes, and making room for an equal amount of the newer stocks which the issuers have been vainly trying to float for some time past. That is a dazzling prospect in itself, apart from any effect which the measure might have on the currency.

As to its influence upon the latter, we must repeat what we have said many times before, that a currency secured by bonds lodged in the Treasury, whether Government or corporate bonds, never can be an elastic currency, since the element of bank credit does not enter into it. The banks in that case do not "issue" notes, they buy them from the Government, and then make such use of them as they can. Whether the notes are based on bonds of the United States or on those of railroads makes no difference so far as elasticity is concerned. More profit may be made from issues of the latter sort, but the principle is not altered in any way by the substitution of the one kind of security for the other.

Upon this point there is an important communication from Mr. James B. Forgan in the current number of the *Bankers' Magazine*, in which he shows what is meant by an elastic currency, and how alone it can be attained. The common belief is that elasticity means expansion. Mr. Forgan shows that it means contraction also, and that the two processes must go together in order to have any beneficial effect upon commerce. Bankers make a profit on their circulation only when it is out. When it will no longer stay out, but returns to them, it represents a net loss if it has been bought from the Government. On the other hand, if it has been issued by the bank on its own credit, then when it returns it costs nothing for the bank to hold it unused in its vaults until the public demand calls for it again. Currency issued as a part of a speculation in bonds does not have any necessary relation to the demands of general business. It rises and falls in volume according to the state of the bond market, quite irrespective of seed time or harvest or other emergencies of trade.

A striking illustration of these principles was supplied last year when Secretary Shaw sought to apply artificial stimulants to the national bank circulation, in order to meet a real need. He first ordered the Bureau of Engraving and Printing to prepare some $60,000,000 to $70,000,000 in national banknotes for some of those banks which had not yet availed themselves of their full privilege of circulation. When the usual fall stringency became marked, the Secretary went over a list of national banks holding public moneys, and whenever a bank had not yet taken out what he judged to be a reasonable amount of circulation, he intimated that it ought to do so.

Having the notes already printed, he was able to respond at once to applications for them made as the result of his suggestion. Next he increased the number of bank depositaries and, in some instances, the amount of depositary accounts already existing, upon the express condition that the banks thus favored were to take out at once an amount of circulation equivalent to the amount of public moneys so deposited with each. And lastly, he permitted the depositary banks to substitute municipal and State bonds as security for public deposits, provided the banks so making substitution would immediately pledge the United States bonds thus released as security for additional circulation.

By all these means, extraordinary in character and quasi-coercive, Secretary Shaw added to the national bank circulation some $25,000,000. This was not a net increase, however. The addition barely sufficed to overcome the tendency to retire circulation which was manifest last year. The new circulation taken out exceeded the amount of circulation retired by only $2,000,000 to $3,000,000, showing in the clearest manner that the present banknote system can furnish no relief to the money market, however great the stringency may be. Changing the kind of security while retaining the system would not perceptibly better the present condition.

BLACKMAIL.

Mr. Jerome's probe has already struck deep into the abscess. The account which he gave out last week of the way in which extortion, bribery, and blackmail have been preying upon the building trades in this city is of the deepest significance. Both employers and men are involved. A suspected but hitherto unexplored world of "graft" is thrown open to our gaze. As is always the case when revelations of this sort once get going, they thicken even while we are looking. Guilty men take fright. Informers seek to make their peace. Victims pluck up courage to narrate their wrongs. It was so in St. Louis when Mr. Folk got his first briber in the toils; it was so in Washington when the earliest postal rogues were caught; it is so, and will be increasingly, as Mr. Jerome's inquiries and legal proceedings continue. The arrest of Parks was the bold act which let loose the avalanche. The rest will come of itself.

It is a depressing story. The manhood, courage, and honesty of neither masters nor men appear in a happy light. One scarcely knows which more to blame—or pity. As for the trades-union side, what we have is simply the sorrowful old tale over again. The labor leaders have neither ability nor character commensurate with the tasks they undertake, or the irresponsible power that is put into their hands. We admit that there are exceptions. It was cynically said last summer that John Mitchell was only waiting to be bought. Apparently he could not be. Doubtless there are other men prominent in the labor movement who are filled with a fiery enthusiasm for their work and their class, and who are fanatical in their honesty as in their other qualities. But faith in them will be rudely shaken, even if unjustly so, by the disclosures in connection with the New York walking delegates. The proved corruption of these men, their greed, their recklessness, their cruel deceit of the very workmen upon whose weakness and credulity they wax fat, will discredit their whole order.

In so far as this may result in opening the eyes of the laboring classes and of the entire community to certain fundamental truths of human nature and of morality, it will do good. Wise leadership cannot be improvised in a trades union any more than in a college or church or government. You cannot take the first man you meet in the street and give him power without accountability. If you do, the weakness of mortals being what it is, the chances are ten to one that the temptation will be too strong for him. He will, as we see that the man Parks did, grow arrogant with his opportunities and use them for base ends. Only the rare leader, the selected and tried man, is fit to be given such unlimited power of oppression as Parks enjoyed. This is the thing for workingmen everywhere to take to heart. They must be on their guard against foolish and venal leaders. How incredibly stupid the management of the building trades unions has been in all this vicinity may be seen by any one who will look about him. Building has been brought practically to a standstill. No one contracts for so much as a dog kennel unless compelled. But this is, for the building trades, to destroy the chief benefit of prosperity. That consists more in steady employment than in high wages. But the labor leaders have wantonly thrown it away, and have plunged thousands of carpenters and masons into distress. The demand

for more mind and better character on the part of the men who control the policy of trades unions could not well be put in higher relief.

But what of the employers who meekly submit to blackmail, who secretly pay bribes, who craftily make arrangements with the walking delegate whereby they think they will get an advantage over their rivals? Well, we scarcely know whether to exclaim at their folly or grow indignant at their wickedness. Any man who surrenders to a blackmailer is a fool. That is a truth established by the well-nigh universal experience of mankind. When you begin to pay extortion money, you never know where you will end. Once in the power of a blackmailer, your blood will be sucked. The daughter of the horseleech was not a circumstance to the insatiate greed of a man who lives by blackmail. That is a general principle; and any employer, or corporation, that stoops or cringes before a blackmailer, thinking the thing can be done just for that once, is really inviting renewed assaults, and is guilty of the most glaring disregard of his own ultimate interest.

Even if it were not so, it would be the duty of every honest man and good citizen to refuse to pay one cent to the blackmailer, whether he came in the guise of a walking delegate or a Tammany agent. If extortion is a crime—as the Penal Code declares—no man can submit to it and remain innocent. The whole transaction is necessarily tainted with fraud, and, in strict morals, if not in law, the powers that pay are fully as guilty, fully as dangerous a class, as the powers that prey. This truth it is just as essential to preach among corporations as it is to indoctrinate labor unions with the gospel of mental and moral capacity. We have no patience with the men who weakly give in to the blackmailer, or with the excuses offered for them. In most cases, they could defeat the blackmailer and land him in jail by expending half the money they give in bribes; and even if they could not, it is their duty to fight blackmail to the death, and see their business go to ruin, if necessary, rather than strike hands with criminals, or pay one penny for corrupt purposes.

THE SHIPYARD SCANDAL.

The question of the Shipyard Trust's collapse is now before the courts, where it undoubtedly belongs. There are some phases of this financial scandal—destined, very likely, to become famous in the history of the recent bubble-blowing period—on which we feel justified in commenting, even before the courts have handed down their opinion on the question of outright fraud. President Schwab of the Steel Corporation, whose relations to the Shipyard promotion are made a part of the complaint in the pending suit, makes his own answer out of court. In the suit for a receiver, instituted last week, it was alleged that the purchase of the Bethlehem Steel Company from Mr. Schwab was made by the Shipyard promoters after their associates had "underwritten" the original Shipyard combination, and was made without their knowledge. Further, it was asserted in the complaint that Mr. Schwab was reimbursed for an original outlay of $3,000,000 in the Bethlehem property by receiving $10,000,000 bonds of the Shipyard combination, $10,000,000 preferred stock, and $10,000,000 common.

The burden of the complaint is, that Mr. Schwab, through this immense inflation on a paper basis, received such preferential treatment over the rest of the Shipyard security-holders that he was able eventually, when the bubble burst, to assert the power to control the whole. This power, it is shown, is conceded by the plan of reorganization, which offers to Mr. Schwab, in exchange for his $10,000,000 holdings of old bonds, new bonds covering all the Shipyard properties, while asking other present first-mortgage bondholders to take new stock instead. It supplements this part of its complaint by charging that buyers of the Shipyard bonds and stock, outside of the block of securities issued to Mr. Schwab, were induced to buy through "gross and persistent misrepresentations by the organizers" as to the company's assets, earnings, and condition.

This last allegation no one appears to dispute. The reorganization circular, in proposing settlement with Mr. Schwab, admits it. Instead of earning, as the original prospectus promised, interest on bonds, 6 per cent. on preferred shares, and a handsome surplus over, the reorganizers say:

> "By reason of excessive mortgage obligations of the United States Shipbuilding Company, its borrowing capacity and credit have become so seriously impaired that outstanding notes are being pressed for payment, and the making of further loans is rendered impossible."

The $10,000,000 bonds, issued as part payment for the Bethlehem Steel Company, make up 40 per cent. of these "excessive mortgage obligations."

Mr. Schwab's narrative of his own part in the "deal" lacks clearness in some respects, especially as regards actual ownership of the Bethlehem property before its sale to the Shipyard combination. The Shipyard promoters went to Schwab with their proposals, supposing him to be the owner. So every one else in Wall Street had supposed, from a statement publicly given out in September, 1901, that most of the Bethlehem Company's $15,000,000 stock had been purchased at $24 per share, through Drexel & Co. of Philadelphia, by Charles M. Schwab. Mr. Schwab, however, according to his own story, informed the Shipyard people, when they came to him some months later, that J. P. Morgan & Co. controlled the Bethlehem stock. In other words, it had apparently been turned over by Mr. Schwab, but in a curious way; the banking house, Mr. Schwab explains, having "acquired the Bethlehem Steel Company for the original Steel Corporation syndicate." This strikes us as a little odd, and probably will so strike subscribers to that syndicate.

Passing that, what happened in the trade with the Shipyard combination? Mr. Schwab tells us:

> "I called upon J. P. Morgan & Co., and after several conferences they decided they would be willing to sell and dispose of the stock of the Bethlehem Steel Company provided payment therefor were made in cash. I communicated to Messrs. Nixon and Dresser the conclusion of Morgan & Co., and the former then wanted to know if I would be willing to assist them in securing the funds. As they had closed their underwriting for the shipbuilding company, I entered into negotiations with them looking to my furnishing the necessary cash requirements. . . .
>
> "We finally agreed that I should secure for them the stock of the Bethlehem Steel Company and furnish the money necessary to make payment therefor to J. P. Morgan & Co., and in consideration thereof I should have the benefit of the accumulations since I first bought the property, and receive $10,000,000 in bonds and $10,000,000 in each kind of fully paid stock.
>
> "Thereupon I took up the matter with Morgan & Co., who insisted that they must have in addition to the cash invested 25 per cent. of each kind of stock which I was to receive, and which I agreed I would be willing to have Messrs. Nixon and Dresser deduct from the $10,000,000 of each kind of stock they had agreed to give me, so that Morgan & Co. might receive it as additional payment for the Bethlehem stock."

Mr. Schwab contends that his actual outlay in the matter must be ascertained by adding to his cash payment to the bankers the accumulated earnings in the hands of the Bethlehem Company. But if he was buying the property from one owner for the benefit of another, we fail to see what claim he had upon it, save for the actual purchase price. Mr. Schwab's explanation shows that his personal interest in the Bethlehem transfer was the advancing of $9,000,000 cash, for which he received the $10,000,000 Shipyard bonds and $20,000,000 stock as above described. He asserts very positively that he believes himself to have been a loser by the operation. This is possible, when at the present time the Stock Exchange bids 1 cent on the dollar for the Shipyard common stock, and 3 for the preferred. But we do not regard that fact as conclusive in the matter. We cannot see that even Mr. Schwab's frank proposition, to take back the Bethlehem property and restore to the Shipyard Company the securities received for it, helps the matter very greatly. The question is, whether paper inflation of this sort was the kind of business in which these gentlemen had any right to be engaged.

As the affair turned out, efforts to unload the Shipyard shares on the public very generally failed. It did not, how-

ever, fail for want of false statements to the public. What we feel bound to ask is, what Mr. Schwab would have done with his $10,000,000 common and $10,000,000 preferred if the fish had swallowed the bait. Let us imagine the simple public bidding for Shipyard stock at a valuation fixed by belief in the organizers' prospectus; what then? To us, the most serious thing about this whole financial scandal is the easy conscience which it shows financiers in places of great trust to have possessed in their attitude towards the public. It is conceivable that Mr. Schwab, like many others of our newly made "multi-millionaires," shared in the late delusions regarding paper capital, and really believed that riches could be got overnight, without hurting anybody else, by merely substituting thirty for nine millions in a balance sheet. We observe a good deal of apology, by projectors of this and similar enterprises, on that ground; they being simple people and not used to figures. We scarcely think the excuse will be accepted. It is at all events a sort of simplicity which we should greatly regret to see becoming general among the practical leaders of American industry.

THE SHERMAN STATUE.

NEW YORK, June 10, 1903.

No event has ever taken place in this country of equal artistic importance with the unveiling, two weeks ago, of the heroic equestrian statue of General Sherman by Augustus Saint Gaudens. Our public monuments are not always such as a civilized nation should be proud of, but we have unquestionably produced, both in painting and in sculpture, much respectable and some excellent work. In the Sherman statue we have much more than this—we have, in an American city, a monument which, in conception and in execution, is among the half-dozen masterpieces of its kind in the world. The history of such a work must always be interesting, and it is well to set down now, before they are forgotten, the main facts and dates of its production.

Eleven years elapsed between the commissioning of the statue, in 1892, and the unveiling on Memorial Day, May 30, 1903. Undoubtedly, the time seemed long to the committee in charge of the work, but Saint Gaudens is one of those artists for whom it is worth while to wait. During three of the eleven years his work was much interrupted by a grave illness; during the other eight years he was more or less constantly at work upon the group, and he estimates that it cost him about three years of actual labor. His infinite painstaking, his constant revision, his inability to rest satisfied with anything if he could conceive of a possible betterment, spread the three years out over the eight.

The sketch was completed in a few months and accepted by the committee; in it the essential features of the group were fixed, and they have not been materially altered. This is important as showing that the conception of the Victory-led rider antedated by some years any possible knowledge of the somewhat similar conception of Begas's "Emperor William" in Berlin. By a strange coincidence, then, the same idea, wholly new in art, seems to have occurred at about the same time to two artists widely distant in space. In the intervals of other work, during the next five years, the horse and rider were modelled on a small scale and the Victory was studied in the nude. In 1897 Mr. Saint Gaudens went to Paris and there began the full-sized group, devoting most of his time to it, and in 1899 the horse and rider, without the Victory, were exhibited at the Salon of the Champ de Mars. The merit of the statue was at once recognized, and it was given a place of honor and greatly praised by artists and critics. At the Paris Exposition of 1900 the whole group, in plaster, was seen for the first time, and for it and a group of earlier works the sculptor was awarded a *grand prix*.

In spite of this success, he was not satisfied with the work. It was to be cast in Paris, but returning, seriously ill, to this country, he brought a plaster cast with him, built a studio near Windsor, Vt., in which to set it up, and began making changes. He remodelled the head of the Victory, her wings and palm branch, the cloak of the rider, and various smaller details, and sent the remodelled parts to the bronze-founders in Paris. The group, with these changes, was then sent, still in plaster, to the Pan-American Exposition at Buffalo, where it was the principal cause of an extraordinary honor to the artist. The jury of the section of Fine Arts, composed of painters, sculptors, and architects, unanimously recommended that a Special Diploma and Medal of Honor, apart from and above all other awards in the Exposition, be created for Mr. Saint Gaudens, and the recommendation was adopted by the general jury, and the award was made. This success, like former ones, seems to have been a signal to the artist to recommence his struggle for perfection. The bronze was brought to Windsor and set up in the open air, and experiments in gilding and toning were begun, while the base was remodelled and twice cut in granite. Finally, in the spring of this year, the work was ready to be shipped to New York and placed upon its pedestal in the Plaza, near the entrance to Central Park.

The type of artistic temperament which leads to continual changes and reworkings is not without its special dangers which a more positive and self-assured mind—what the French call an "esprit primesautier"—escapes. It has even happened to Mr. Saint Gaudens to produce a work the final form of which he would now admit to be inferior to the original conception. When, however, the original conception is clear and tenaciously held, the revision of details tends only to greater purity and beauty of statement, as it has done in the present instance. Sherman had seemed to the boyish Saint Gaudens the typical American hero; to the matured artist he had sat for an admirable bust. When the sculptor was called upon to prepare the monument to the great soldier, he was equipped with a knowledge of his subject which the designer of a posthumous statue rarely possesses, and with a genuine enthusiasm for his task. His idea came to him in such definite and vigorous form that his subsequent labor was but the refining of details; he was sure of his masterpiece from the start.

The Sherman monument is the latest term in the long evolution of a remarkable talent. In its earlier stages this talent might have seemed more decorative—almost more pictorial—than purely sculptural. To many it appeared that Saint Gaudens's best things were his dainty portrait reliefs of women and children, his exquisite caryatids and angelic figures; wonderful play of line and a delicate caressing of surface seemed his most notable characteristics. These characteristics he has retained, but in one after another of his more important works he has shown an ever-increasing grasp of structural form and a steady growth in masculine vigor of conception, until he has revealed himself a great sculptor in the stricter sense, as he was already a great artist.

The group is about twice the size of life in each dimension, so that the figure of the General, if standing, would be about twelve feet high. Tall and erect he sits his horse, his military cloak bellying out behind him, his trousers strapped down over his shoes, his hat in his right hand, dropping at arm's length behind the knee, and his bare head, like that of an old eagle, looking straight forward. The horse is as long and thin as his rider, with a tremendous stride; and his big head, closely reined in, twitches viciously at the bridle. Before the horse and rider, half walks, half flies, a splendid winged figure—one arm outstretched, the other brandishing the palm—Victory leading them on. She has a certain fierce wildness of aspect, but her rapt gaze and half-open mouth indicate the seer of visions: peace is ahead and an end of war. On the bosom of her gown is broidered the eagle of the United States, for she is an American Victory, as this is an American man on an American horse; and the broken pine bough beneath the horse's feet localizes the victorious march—it is the march through Georgia to the sea.

One of the most remarkable things about the group is the extraordinary sense of movement and of irresistible force conveyed by it. The gait of the horse is only a quick walk, but horse and rider and striding Victory move onward with a rush, and one feels that nothing can arrest their progress. The base of the statue is not of bronze, as is usual, but is cut in a pinkish granite like that of the pedestal, and, though it has been gilded like the figures, the difference in color and texture which remains seems to aid the sense of motion by separating the figures from the ground which they move over rather than grow out of. The whole treatment of color and texture is rather daring and altogether successful, and gives the monument a decorative beauty and splendor which does not detract from its inherent gravity. The Greeks, builders of chryselephantine statues, would have appreciated this. A most interesting artifice, not found in the original sketch, is the change of level in the base. The ground slopes slightly upward from the rear until it is highest just in front of the forefoot of the horse, then falls rapidly to the front. This gives greater height to the figure of Sherman, while increasing the sense of strain and push in the hind quarters of the horse; but its most remarkable effect is in giving a sort of downward flutter to the Victory, so that, though marching on the ground, she seems newly lighted there from a previous aerial existence.

From every point of view the composition builds up superbly. The flow of line in wing and limb and drapery is perfect; the heads are magnificent in characterization; the anatomical structure, human and equine, is thoroughly understood; and the surface modelling is beautiful in the extreme.

The finest equestrian statue of modern times is undoubtedly the earliest of all in date, the "Gattamelata" by Donatello in Padua. In serene dignity and restrained strength it has never been approached, and is perhaps unapproachable. Its air of quiet courage and determination makes the picturesque swagger of Verocchio's "Colleoni" at Venice seem almost theatrical by comparison. We can only guess what Leonardo would have done or what Michael Angelo might have done, and there are really no more equestrian statues of high rank until our own day. Artists even forgot how a horse walks, and critics still repeat that the gait represented by Donatello and Verocchio is an "amble." Of more recent works the two finest seem to me to be the "Jeanne d'Arc," by Frémiet, in the Place des Pyramides, and the other "Jeanne d'Arc," by Paul Dubois. Frémiet's statue, in its earlier form, was infinitely charming rather than great. He has remodelled it, and the general opinion seems to be that the added robustness of the figure has not attained to grandeur, while there has been some loss of charm. Dubois's Jeanne is also a slim and dainty figure, with a certain quaintness of attitude and a quality of spiritual beauty. Both of these statues are, technically, masterpieces, but they are not more masterly in execution than is Saint Gaudens's Sherman, and they are, perhaps, less imaginative and original in conception, and have certainly less of heroic grandeur. Before them both, and immediately after the Colleoni, if after it at all, I should be inclined to place the most recent of the world's great equestrian statues.

KENYON COX.

THE PALACE OF MINOS.—II.

CNOSSOS, April 24, 1903.

When we came down from the heights of Phaistos reluctantly, we felt that after this anything else, even Cnossos, must be an anticlimax; and although we gained time, by our all too early departure, to explore the so-called Labyrinth of Gortyna and have another period of two hours at the great inscription, we were not consoled. Our hasty departure was caused by the need of getting along to a place where we could secure luncheon. It was scandalous that for such a reason we gave only little over an hour to that splendid palace.

On our long circuit from Phaistos to Cnossos, among many places of absorbing interest there was none more interesting than the cave at Psychro, in the flank of Mount Dicte, which overlooks the Lasithean plain, a great lake bottom in the heart of Crete. There can be no doubt that for ages the water stood five hundred feet deep up to the mouth of this cave, which served as an overflow pipe until a lower opening was forced through. Then the cave became a sacred grotto, rivalling in renown the two great sacred caves on Mount Ida. It was cleared out by Mr. Hogarth, formerly director of the British School at Athens, about three years ago; and, in spite of the quantity of votive offerings that had already been found and sold by peasants, an astonishing amount was discovered by Mr. Hogarth—bronze and terracotta figurines, vases both Mycenæan and of the older kind now known as Kamares ware, from the great find in the cave on the south slope of Ida above the village of Kamares. Double axes, knives, and other objects of bronze were found in considerable abundance. But the cave itself, which runs down deep into the mountain, and in one part by its stalactites and stalagmites is made to look like a vast organ, is well worth a long journey. In the crevices between some of these stalactites some of the most interesting figurines were found. There is little doubt that many more have become embedded in them by the slow deposit of centuries of dripping.

When, having traversed our great circle, we came back to Herakleion, we had two days and a half for Cnossos and the museum. Towards the evening of our last day's ride we passed the low hill of Cnossos with the British flag waving over it, and still thought of it as in some respects likely to prove an anti-climax to Phaistos. But a visit to this low hill the next day removed this misgiving. The site of the palace of Phaistos is superb, and the palace itself grand; its plan is clear, and coincides in so many points with that of Cnossos that it throws great light on the latter. It is great good fortune that the excavations of the two were partly synchronous. But it is Cnossos that is the more important.

Mr. Evans gave the whole forenoon to a systematic explanation of the palace and its contents. He then constrained us to stay with him to luncheon, after which he stood ready to answer the questions with which we plied him. After that, since the eye is never satisfied with seeing, we looked at detail after detail until the approach of evening warned us that it was time to return to Herakleion. Not short of the compass of a big book can one fully describe even the *important* features of this palace. In an article like this, one must make a selection.

The question of chronology is apt to be uppermost in archæological matters, and one always seeks to get clear on this point. Evans early observed that, back of the present form of the palace was an older one, many blocks of which had been used in the construction of the new. The later palace may from its structure and contents be placed in the bloom of the Mycenæan period, say 1400 B. C., but the older one, to which many of the gypsum door jambs and other blocks of the earlier may belong, goes back into the Kamares period, and may be assigned to 2000 B. C. But not even the older palace represents the oldest settlement on this spot. Pits have been sunk through the palace floor to a depth of seven metres, where pottery of the neolithic period is found; and the various strata show that age succeeded age, making a mound where there was once practically level plain. There seems no reason why this particular spot should have been chosen, except perhaps the fertility of the surrounding fields. It was in no sense dominating—in fact, it was dominated by hills nearly encircling it. But, whatever the chance may have been that led to the original settlement, the spot was clung to most tenaciously. There are no signs of a fortification wall for either palace. Since both of these point to prosperity and luxury which always excite to attack and plunder, the occupants of the palace must have felt themselves in secure possession by powers of their own. This could not be simply because they dwelt in a seagirt isle. They must have controlled the sea also. With this fits the oldest traditions in regard to Crete, that King Minos of Cnossos was the first to establish a sea-power. That Thucydides (i. 8) apparently put this event before the Trojan war seems to fit well into the chronology as shown from existing remains. It may be a question whether the first or the second palace was that of Minos; but as his appears to have been the great age of Crete, we may with some confidence take the present great palace as his.

To one who may be disposed to believe that all chronological conclusions in regard to these remote times are structures built on sand, the following incident may be worth relating. The veteran Egyptologist, Flinders Petrie, who was stopping at our hotel and with whom I drove out to Cnossos, had brought with him a piece of dark plain pottery which he pulled out of his pocket at the sight of something similar in Evans's great piles of sherds. After one or two fairly good matches, he came to a considerable part of a vase which was so much like his fragment that it seemed as if the two might well have belonged to the same vase. He then said to Evans, "Where do you date your piece?—for I can date mine exactly." Evans replied without hesitation that he put it in the neolithic period, about 4000 B. C., whereupon Petrie said, "That is exactly where I put mine, for I found it in a tomb of the first dynasty."

The palace is quite as large as that of Phaistos and in some respects better preserved, inasmuch as we have considerable remains of a second story. That there was in at least a part of the palace a third story is shown by a grand quadruple staircase in the eastern part, two flights to each story. One of the most impressive portions is a long gallery near the western side, to the west of which were nineteen long and narrow storerooms. These were full of *pithoi*, of about a man's height, arranged along the walls, while in the middle were crypts under the pavement. Nothing important has been found in these crypts, but the great *pithoi* were, in all probability, for the most part filled with oil. Such enormous quantities of oil (one store chamber contained thirteen of these *pithoi*, which may be compared to hogsheads) could hardly be meant for home consumption, and probably point to traffic with Egypt. One *pithos* contained barley, which may also have been exported to Egypt to make beer.

There were numerous frescoes on the walls of the palace, the best of which have been removed to the museum at Herakleion. There are so many fine ones that it is invidious to make distinctions. One of the finest is that of a cupbearer standing very erect and holding a long slender vase pointed at the bottom, resembling in shape

many vases of alabaster that were found in the palace. The favorite theme seems to be the bullfight. In one case a woman appears to take part in this performance. Evans has even suggested that the tribute of youths and maidens exacted by Minos from Athens may have had some connection with this amusement. There is an ivory figurine also of an athlete who seems to be engaged in a similar action, who had locks of bronze wire coated with gold foil inserted. The bullfight everywhere comes to honor, making the Tiryns bullfighter, in the same attitude, seem like a waif from Crete. One of the most conspicuous finds was a relief in *gesso duro* of the head of a bellowing bull affixed to a wall. Of the dreadful Minotaur there are no traces except on gems; and, but for the presence of these, we might consider the whole legend of the Minotaur as a distortion of the cruel use made of the Athenian captives. It may be added here that long, deep subterranean rooms have been classed as dungeons, which the Athenians may have shared with other unfortunates.

This palace of Cnossos was known in antiquity as the Labyrinth. This word is doubtless derived from *labrys*, meaning an axe. The palace was then called "the palace of the double axe," and very properly; for everywhere, sometimes mixed up with other signs, is cut on the stones of the palace this double axe, thus: ⋈. That it could be a mere mason's mark is precluded by its very frequent occurrence, as well as by its appearance on vases and other objects. There can be little doubt that it was a sacred symbol representing the unseen god; as such it appears on the seal ring from Mycenæ, above referred to. Another such symbol, of somewhat frequent occurrence, is "the horns of consecration." There is a shrine in the palace, now roofed over and enclosed for protection, in which these horns of terracotta, shaped thus: ⋃, stand with a few votive figurines of worshippers grouped around them. That these are "the horns of the altar" of the Old Testament seems beyond doubt. They also appear on the little gold shrines from Mycenæ. How pure and exalted the religion of the period was, we cannot say; but it is certain that idols were unknown. One likes to think that the worshippers saw in these symbols a suggestion of an unseen but everpresent divinity.

Not far away from this, the so-called throne room has in like manner been provided with a new roof and with columns of the Mycenæan style, tapering downward. Against one of the walls is a finely carved chair of alabaster with a back, which may be taken without much hesitation as the seat on which the lord of the palace, whether he were Minos or called by some other name, sat in state, with his counsellors on benches around about him. This work of preservation is a sort of restoration; but it is certainly not only a more proper restoration than that so long practised on statues in the museums of Italy, whereby the original parts were disguised beyond recognition, but it is also a work of necessity to save from destruction what one has uncovered. When one sees how much of Evans's work is done by masons and carpenters, one must not accuse him of building the palace which he now presents. Some considerable lines of wall are absolutely necessary to hold in position parts of the palace which would otherwise become a shapeless mass. Great props of wood which support thresholds and staircases of upper stories are extremely ugly; but what can one do? And, after all that has been done, the larger question arises, How long will all this last? There is no doubt—it is a question of years—that, when exposed to constant rains, the palace will disintegrate. It is an oft-repeated saying in Greece that excavation is destruction (*ἀνασκαφή, καταστροφή*). I have heard one of the foremost of excavators say that the proper treatment of Olympia would have been to make the most careful plans, and then cover everything up again. But even in that case what is covered up is lost to the world. It is a difficult question, the proper treatment of important buildings once excavated. For a decade or two, according to the present practice, one gets at least the sight of them. In Cnossos the splendid gypsum blocks are already attacked by the weather. One must make his visit without too great delay, to get the full enjoyment of this perhaps the most splendid of all excavations.

To facilitate the observation of the whole palace from one point of view, it is proposed to build a wooden tower from fifty to a hundred feet high at a point near the centre of the palace. That this will be extremely unsightly is conceded by everybody; but in this point it may be well for æsthetic considerations to give way to utility.

However tempting it may be to describe others of the magnificent objects of art that have found and are finding their way from Cnossos into the museum at Herakleion, rapidly making it one of the world's most important museums, I must refrain, and content myself with this general reflection: When one considers the splendid naturalness and almost perfection of much of this art—for example, the fresco with dolphins swimming among a shoal of little fishes—one feels the pity of it that all this bloom was wiped out, and that the Greeks had to begin all over again, and toil up to the heights once attained centuries before.

RUFUS B. RICHARDSON.

Correspondence.

AMERICAN STUDENTS IN THE ORIENT.

TO THE EDITOR OF THE NATION:

SIR: While I have not the slightest sympathy with Buddhistic or with so-called "Theosophic" propaganda in the Occident, I am nevertheless convinced that the teachings of Buddha and the genuine Theosophy of the Upanishads have lessons of great value for us restless and hurrying Americans. The interpretation of the best thought of the East into terms of Occidental thought is at present the most practical work that an Indianist can undertake. If he can make the wisdom of the Wise Men of the East available as an influence upon the leaders of the religious life and thought of our time, he will accomplish something analogous to the work of the student of foreign systems of national government or of municipal administration: there is surely no antidote for either political bigotry or its twin sister, religious bigotry, so potent as is the study of the religious or political institutions and achievements of other lands and ages.

For the right comprehension of the religions of ancient India there is needed not only the broad technical training of the best universities of Europe and America, but also that facile command of the Sanskrit language which is hardly to be acquired outside of the best native schools of India itself. Our honored countryman, the late Dr. Fitzedward Hall, whose remarkable erudition in another field has so often adorned your columns, was doubtless the first American to become a learned Sanskritist by actual residence and study in India. That began, to be sure, nearly fifty-seven years ago (the year of his graduation at Harvard with Professors Child and Lane and Norton and Senator Hoar), and he paid for his bold venture by shipwreck at his journey's end, off the mouth of the Ganges. Escaping with naught but his life, he reached Calcutta, penniless, although the son of a man of wealth, and, after experiences of greater interest than many a romance, he removed to Ghazeepoor, and thence, shortly afterward, to Benares, the Athens of India. His progress in the acquisition of several of the Indian languages was such that he was soon advanced to the position of Anglo-Sanskrit professor in the Government College of Benares. His 'Atmabodha,' and 'Tattvabodha,' two introductions to the Vedanta philosophy, appeared in 1852, and were the first Sanskrit texts published by an American. His valuable collection of Oriental manuscripts and books, which he gave to his alma mater, are a precious memorial here of his life and learning.

Only four years ago, the principal of the Oriental College at Lahore, Dr. Stein, on his promotion to Calcutta, wrote to Professor Bloomfield, to me, and doubtless to others, asking for nominations to fill the vacancy at Lahore caused by his promotion. The successful candidate was again an American, Professor Bloomfield's pupil, Dr. Alfred W. Stratton. To onerous administrative duties he added the work of instruction. A part of the teaching was in Hindustani, and he had, besides, to be able to converse with the pandits in Sanskrit. His career was one of unusual achievement and of brightest promise; but it was cut short, alas! by his untimely death in the summer of 1902.

During the academic year now closing, two other Americans have been pursuing their studies at the College in Benares. One was Dr. James H. Woods of Boston, in 1901-02 an instructor in the Department of Philosophy at Harvard. In the summer of 1902 he had the privilege of working in close personal relations with Deussen of Kiel, confessedly the greatest master of Indic philosophy in the Occident; and since then he has been studying under the pandits of Poona and Benares and Cashmere. Hall's loss of his bills of exchange in 1846 was a disaster, remediless for many weary months of hardship and ill-treatment; to-day it would be only an inconvenience, remediable within twenty-four hours: a contrast of which I am forcibly reminded by the receipt, before nine o'clock this morning, of a cable message from Dr. Woods relating to his plan of work, and dated this day at Srinagar, the capital of the storied Vale of Cashmere, beyond the first great range of the Himalayas!

Schwegler's 'Handbook,' famous in my college days, says, "With us, as with Aristotle, the history of philosophy begins with Thales." "The Oriental (Chinese and Indian) so-called philosophy (rather theology or mythology) . . . falls outside of our undertaking." Professor Royce, in his Gifford lectures ('The World and the Individual'), has devoted one or two of his retrospective chapters to an analysis of the Indic mysticism; and it remains to be seen whether Dr. Woods or any other student will grasp the essential features of the great Indic systems, Sankhya and Vedanta and the rest, with such power, and present them to the thinkers of the West with such effectiveness, as to compel the practical admission of the fact that the history of philosophy no longer begins with Thales.

The other of the two American students at Benares was also a Bostonian, David Brainerd Spooner. He is a graduate of Stanford University; went out to Japan, where he was at once a student and a teacher; and was attracted thence to India, to continue (for several years, as he hoped) his Sanskrit studies begun at Palo Alto. Private resources, however, unexpectedly failing him, he relinquished his plan and prepared to return home. Meantime, moved by strong testimonials from the authorities of Stanford and others, some friends of Harvard gave to the University the funds for the maintenance of her first "Travelling fellowship in Indic philology" for 1902-03, and this young man was appointed thereto. I have never seen him; but evidence from independent sources seems to justify the exceptional proceeding of the University in this case. The *Pioneer* is a daily published at Allahabad, and is a journal of highest standing in the Anglo-Indian press; and I should be glad to have you reprint from its issue of April 27, 1903, the following extract:

"The results of the Benares Sanskrit College examinations, which are published in the last *Gazette*, contain a feature of peculiar interest. Among the list of candidates who have passed the whole of the Madhyama (Intermediate) examination occurs the name of Mr. D. B. Spooner of the Harvard University. Not only has this American scholar passed the entire examination, which is usually taken in parts extending over four years, at one attempt, but he stands fifth in order of merit among the fifteen students who have achieved this feat. The examination is one which is conducted solely on the lines of Indian scholarship, without any introduction of Western comparative methods of philology. Not only have all the candidates hitherto been invariably Hindus, but an overwhelming proportion of them are Brahmans. Mr. Spooner's success illustrates alike the strong hold which Eastern studies have taken in the far West, and the thoroughness which characterises his countrymen in all their undertakings."

The above facts are no less significant for the progress of Indology in America than is the establishment of the schools in Palestine and Rome and Athens for that of Semitic and classical studies. Modern discoveries in astronomy, physics, chemistry, and the like have relegated whole libraries of mediæval and even of comparatively modern theology and speculation to the rubbish heap. The intelligent and sympathetic disclosure to the Occident of the best life and thought of the Hindus may do much to relegate our self-centred assumption of superiority to them in all things unto that "limbo large and broad," the "Paradise of Fools," of whose inmates alone it is worthy.

India's saints have had wonderful visions of God; to her sages have been given strange previsions of some of the most marvellous results of modern science; never has the antithesis between religion and dogma been set forth better than it was by the gentle Gotama; never were the precepts and example of that great teacher (supplementing and reinforcing, as they do, those of Jesus), more timely and pertinent than they are to-day. For better, for worse, the East and the West are coming into ever closer relations. Young men there are of linguistic training and endowments, and (what is vastly more) of endowments that may ripen into that breadth of vision which discerns how the past may be made to teach the present, and how the abounding strength of one race may be brought to help the weakness of another. Who of those youths will come forward to guide these hoary strangers of the centuries, the East and the West, into the paths of mutual understanding and blessing, and so at last into the cheerful highway of a brighter hope?

CHARLES R. LANMAN.

HARVARD UNIVERSITY, June 4, 1903.

DR. ENGELMANN ON RACE DECLINE.

TO THE EDITOR OF THE NATION:

SIR: While quite agreeing with Dr. Engelmann's assertion (in the *Popular Science Monthly*) that education is not the cause of race decline, a study of the United States census report for 1900 convinces me that race decline has been greatly exaggerated, and that it is possible, on the basis of facts, to take a much more hopeful view of the case than does Dr. Engelmann. His statistics are drawn from six "representative States" which, with the exception of Massachusetts, he does not name. But neither Massachusetts nor any other North Atlantic State can, according to the last United States census report, be considered representative. On page c, volume i., twelfth census, 1900, we find the following statements (italics mine):

"There has been an increase during the decade in native-born of 12,081,650, or 22.5 per cent., and in foreign-born of 1,151,981, or 12.4 per cent. The population as a whole increased during the same period 21 per cent. The increase in foreign-born since 1890 has been small as compared with the increase in the native element, and a glance at the figures presented in table xliii for the several States and Territories makes it apparent that, aside from the increases shown by a few of the North Central and Western States and Territories, practically *all the increase in the foreign-born element is confined to the North Atlantic States.*"

Dr. Engelmann says:

"Important as is the fact of our racial decline, bearing as it does upon our future as a nation, it has not been observed because of the fair general rate of childbirth due to the much greater fecundity of the foreign element, which is from 2 to 2½ times that of the native, bringing the total birth-rate of the State to an equality with that of France—22.4 per thousand living population—or above it."

In comparison with this statement I present a few facts from the United States census which show that Dr. Engelmann's six States cannot be considered representative for the birth-rate of the native-born American population as a whole. In 1900 there were in the United States 41,053,417 native whites of native white parentage, and of these 1,158,585 were under one year of age, thus giving to each member of this class of the population a yearly average of over .028 children, which, multiplied by 1,000, gives an average of more than 28 surviving children per thousand, and a birth-rate as much higher as the added mortality would give—a factor which is unfortunately not obtainable. Of native whites of foreign parentage there were at the same date in the United States 15,687,322, and of these 504,466 were under one year of age, giving an average of more than 32 surviving children per thousand for native whites of foreign white parentage (twelfth census of United States, vol. ii., p. 3). It is evident from these data that the estimate of the fecundity of the foreign population as 2 or 2½ times that of the native does not hold true for the population at large, nor does it even approximate the estimate given by Dr. Engelmann for Massachusetts of 17 births per thousand for native white, and 52 per thousand for foreign white, population.

The estimate of eight children per family for the time of Benjamin Franklin, quoted by Dr. Engelmann, while probably correct, should, as you intimated last week, be coördinated with the fact that the mortality of that period in large families, according to the data given in Mr. Dexter's 'Yale Annals and Biographies from 1701 to 1763,' frequently reached 60 or 70 per cent.

To encourage those who are inclined to take a gloomy view of the future of the native American population, the following facts are presented. By the twelfth census of the United States the white population of the mainland in 1890 was 55,101,258. The gross increase in white population from 1890 to 1900 was 19,056,281, the elements of which were distributed in the following proportions:

Native white children of native white parentage (under ten years)	10,649,101	= 55.8%
Native white children of foreign white parentage (under ten years)	4,719,616	= 24.7%
Immigrants, white parentage (all ages)	3,687,564	= 19.3%
Gross increase	19,056,281	
Deducting the net increase of whites, 1890-1900	11,707,938	
Leaves the total loss by death and emigration	8,348,243	

Assuming that this loss was equally distributed among the different elements, and that 55.8 per cent. of the total loss by death and emigration occurred among native whites of native white parentage (an estimate too large because of the greater mortality among those of foreign parentage, and the fact that the loss by emigration occurs almost entirely among this class), there still remains after this reduction of 4,658,319 a net gain of 5,990,782 due to native white children of native white parentage, or a gain of 10.8 per cent. on the total white population of 1890. The total white population in 1900 was 66,809,196 (twelfth census, vol. ii., p. xvii); 10.8 per cent. of this is 7,215,393, which, multiplied by ten, gives a total increase of 72,215,393 for the next one hundred years, thus more than doubling the white population exclusive of any foreign aid, and, if reckoned by the usual method of compounding every ten years, more than doubling the *entire* popu-

lation by means of native children of native parentage alone.

THEODATE L. SMITH.

CLARK UNIVERSITY, WORCESTER, MASS., June 8, 1903.

Notes.

Longmans, Green & Co. have nearly ready a drama in three acts, entitled "Mors et Victoria," the scene being laid in France shortly after the massacre of St. Bartholomew.

E. Belfort Bax's 'Rise and Fall of the Anabaptists' and Ellis Paxson Oberholtzer's 'Robert Morris: Patriot and Financier' are forthcoming from Macmillan Co.

Sir Henry Burdett's year-book, 'Hospitals and Charities,' for 1903 (London: The Scientific Press; New York: Scribners), continues to present the fullest and most accurate statistics of philanthropy obtainable, prefaced, as usual, by fresh discussion of current problems. It is especially strong in regard to the economy and finance of the institutions it deals with, and practical views are everywhere taken. We may instance the chapter on the hospital construction of the past year as having an obvious utility by reason of the select particulars. The United States charities are embraced in the same view with those of Great Britain and her colonies. The Annual is now in its fourteenth year.

'The International Year Book' for 1902 (Dodd, Mead & Co.) offers a sufficient account of last year's main occurrences, and, while maintaining the plan and standard of preceding volumes, has aimed at "a greater degree of compression" and an advance "in concise and logical treatment." Such topics as the Russianization of Finland, the coal strike, and the Arbitration Commission are handled without fear or favor. Notable among the illustrations are some of the portraits, especially that of President Palma of Cuba. Cecil Rhodes, we are told, "had implicit faith in his intuitions, and that sublime courage and steadfastness which often come from lack of a higher education; . . . a vast, rugged, unlearned simplicity was the basis of his nature," and was shown in "his disregard for the finer problems of ethics" and "his incapacity for deep analytic reasoning." No less free are the comments (pp. 405-6) on Mr. Henry James, who "has steadily cultivated a wilful obscurity of style, a verbal eccentricity. . . . He excels in the art of leaving a thought half uttered, of implying rather than expressing, of analyzing human motives down to infinitely small quantities—the differential calculus of the emotions." This is not the old dry-as-dust cyclopædic manner.

Volume V. of 'Lamb's Biographical Dictionary of the United States' (Boston: Federal Book Co.) pursues the even tenor of its undistinguished way through 666 large pages, from Leaming to Newton. To those who hold that in books of reference we want simply to get the facts, and not to see how well the editors and contributors can write, this work should be acceptable. Yet if facts have souls as well as bodies, a less objective and literal method might sometimes be enlightening. The sketch of General McClellan gives no hint of the doubts and heartburnings which made the autumn of 1862 so critical a time; and that of President McKinley mitigates the tragedy of September 6, 1901, by quoting a whole column from his speech made the day before. Apparently these biographers have found no heights to climb, no rugged ravines to cross; all varieties of character and fortune merge into a level road for their easy pacing. Minor worthies, legislators and pastors otherwise forgotten these fifty years, are here embalmed beside their betters; they all alike were born, did something, held places, and died; and their tale is told in a spirit of plain democracy, neither with undue compression nor with an eye to commercial values and results. Two more volumes (unless the subject grows out of hand) should complete this honest and kindly series, in whose placid pages the toilworn may seek an antidote to the fevered haste of our unresting age.

Mr. T. M. Clark's 'Building Superintendence,' which has kept the field since 1883, has just been revised and republished in a fifteenth edition (Macmillan). Novel in particular is the chapter on the construction of a steel-frame building. The work is designed to be a manual for young architects, students, and other interested persons. It is illustrated by diagrams.

The demand for Dr. Francis H. Williams's solid work, replete with figured and photographic illustrations, on 'The Roentgen Rays in Medicine and Surgery, as an Aid in Diagnosis and a Therapeutic Agent,' is evidenced by its passing to a fresh edition every year. The third edition now comes to us from Macmillan, with an enlarged appendix, which strives to keep pace with the rapid development of the therapeutic uses of the X-rays, particularly in skin disease —a great boon, as the illustrations "before and after" strikingly reveal; and cancer is included.

Another edition of Gilbert White's 'Natural History of Selborne' (Cassell & Co.) tends to stretch out the line towards a hundred. Richard Kearton, F.Z.S., is the present editor, and lays less stress on his notes than on his 123 photographic illustrations from nature. These are all helpful, many of them admirable, and add a grace to the simple and compact letterpress. We have, besides the natural history, views of Gilbert White's country, home, sundial, and gravestone.

J. F. Taylor & Co. begin out of chronological order with 'Hereward the Wake' a new uniform "Library Edition" of Charles Kingsley's Works, manufactured at the Cambridge (Mass.) University Press. This historical romance requires two volumes, 16mo, bound in wine-colored cloth and adorned each with three illustrations of moderate excellence. The series will embrace only the novels and the poems, with 'Letters and Memories of Kingsley's Life,' edited by his wife, and will be under the supervision of Maurice Kingsley, who here furnishes two brief introductions. The whole get-up is quiet and unpretentious.

Washington Irving's 'Astoria' and 'Adventures of Captain Bonneville' have been abstracted to make up the small volume in the Knickerbocker Series styled 'The Fur Traders of the Columbia River and the Rocky Mountains' (Putnams). A useful table of important events has been prefixed, an index provided, and a certain number of illustrations sprinkled up and down, mostly photographs from nature or from old prints. Needless to say that the patchwork is good reading.

Helen Milman (Mrs. Caldwell Crofton), compiler of 'My Kalendar of Country Delights' (John Lane), admits that she has to "run the gauntlet of being called sentimental," and she has not contented herself merely with other men's poesies in decking out her calendar. She trails a running commentary of her own through verse and prose selections, drawn wholly from past authors except for some anonymous inedited verse, and from many rare books. She is careless about indicating her sources either at all or precisely, but her taste is good and her effusiveness not unbearable. The book is very pretty.

The American Sportsman's Library has recently added two volumes to its list, 'Big Game Fishes of the United States,' by Prof. C. F. Holder, and 'Bass, Pike, Perch, and Others,' by Dr. James A. Henshall. It must have been a severe trial to Dr. Henshall, so enthusiastic a devotee of the black bass for these many years, to treat his favorite fish merely as one of so miscellaneous a haul. About eighty-five different species are described, only a small fraction of which could get credentials from the average angler as genuine game fish, and some of which, as the rock bass, are regarded as nuisances by the angling fraternity with almost complete unanimity. No doubt some such round-up was necessary, but it seems a pity that the grayling, the mascalonge, the black bass, and Dr. Henshall should be sacrificed to this necessity. Professor Holder has also to deal with a large and miscellaneous list, though they all possess sufficient size and strength to bring the angler's muscles into strenuous play. Professor Holder stands up vigorously for tarpon and tuna fishing as a high type of sportsmanship, comparing it to the hunting of the lion and tiger. It may be questioned, however, whether the sport in which the fish is sacrificed merely for the sake of the victory in physical strength and skill, with the attendant exercise, stands ethically as high as that which brings a legitimate and healthful article of food to the angler's table. The book is amply illustrated, largely from the originals in the well-known Government report of Dr. G. Brown Goode; but in the six or eight attempts at illustration in color the result is invariably a fish "that never was, on sea or land."

A translation from the Dutch of Holleman's 'Organic Chemistry,' by A. J. Walker and O. E. Mott (John Wiley & Sons), calls for special mention as giving a good outline of the subject in one volume, wherein the reasoning by which chemists have been led to the constitutional formula of each class of bodies is set forth with a lucidity, cogency, emphasis, and prominence that one will seek in vain in any other text-book of organic chemistry. Great logical ability, good judgment, and skill in presentation have gone to the making of this book, which will take rank as a classic.

Ladenburg's 'History of Chemistry since Lavoisier' has been translated by Dr. Leonard Dobbin, with the addition of two new chapters by the author, who has taken great pains with the revision of this English edition. The great convenience and value of the work, especially for its references, are well known (University of Chicago Press).

Considering the advanced state of as-

tronomy in this country, and the distinction of our mathematicians—Bowditch, B. Pierce, G. W. Hill, Newcomb—in this department, it is remarkable that there has been no modern 'Introduction to Celestial Mechanics' in our language. This want has at length been supplied by Dr. F. R. Moulton of Chicago in a work bearing that title (Macmillan Co.), composed with remarkable good judgment, and indispensable to all students of the subject.

A text-book out of the common is the 'Elementary Calculus' of Prof. William H. Echols of the University of Virginia (Henry Holt & Co.). It is the first which, while remaining elementary, easy, and thoroughly practical, makes a serious and well-studied endeavor to put the student in possession of the ideas now generally entertained by up-to-date mathematicians concerning the logic and fundamental conceptions of the subject, no teacher of which should neglect to examine this original and valuable presentation of it.

The eighth volume of the series "Our European Neighbors," 'Danish Life in Town and Country' (Putnams), by Jessie Brochner, is a chatty and careful account of a very interesting little country. The author evidently knows her subject thoroughly, and shows good judgment in the selection of material. We have discovered no serious errors of fact or conclusion. The statement, however, on page 142, that "the new Government readily granted to him [Georg Brandes] that professorship which had been so long withheld," is misleading, as Brandes received, not the professorship of æsthetics, which was already filled, but the honorary title of professor. So, too, the description of the Danish cloisters as "'convents of nobility' for the first three classes" is inaccurate, as Vallö, the most important, admits only daughters of the nobility without regard to other class distinction. The first name of Dalgas is not Ernesto, as is stated in the index, but Enrico. As a rule, the Danish forms, of which there is a large number, are given correctly, and most of the slips in spelling that we have noted are probably printers' mistakes. Among the topics treated in the twenty chapters special mention may be made of the general characterization of the Danish people, which is sympathetic without being unduly laudatory; public education, a particularly timely topic; the position of women; and agriculture. A valuable feature is the set of fifteen illustrations, seven of which deal with Copenhagen. The choice of subjects is excellent, and the execution leaves little to be desired. The only obvious omission is that of Kronborg. The index is inadequate.

Carl Johan Gustaf, Count Snoilsky, the foremost Swedish lyrical poet of his generation, died at Stockholm, May 19. Snoilsky, who wrote under the pen name Sven Tröst, was born at Stockholm, September 8, 1841. After studying at the University of Upsala, where his lyrical talent first found expression in a students' literary club, he entered the Foreign Office. He was rapidly advanced, and in 1876 was elected a member of the Swedish Academy. In this latter year appeared his translation of Goethe's ballads. In 1879 he resigned office and exiled himself for ten years. To this period belongs the most important body of his poetical work, consisting of three volumes published in 1881, 1883, and 1887, respectively. Soon after his return to Sweden, Snoilsky was appointed head of the Royal Library in Stockholm, and in 1893 received an honorary doctor's degree from his alma mater. His last collection of poems appeared in 1897.

A Summer Finding-List is a new and praiseworthy feature of the *Boston Public Library Bulletin* for June. It consists of the titles of nearly a thousand books which can be taken from the Library and retained without limitation as to time between June 10 and September 10. The range of selection has been broad, comprising works in various classes (except fiction) of interest and value to the general reader. Necessarily the more recent publications for which there is an active demand are not to be found on it. Books of the same general character not on the list will also be issued on the same conditions if special application be made for them. This simple method of enabling its patrons to improve the holiday leisure of the summer by good reading is one which every city library might well adopt.

Purchasers of half the first edition of a new novel issued by D. Appleton & Co. responded to a postal-card inquiry regarding the accident of purchase. A little more than a quarter (26 per cent.) owned that the bookseller's recommendation determined them; 16 per cent. had read the author's previous works; 14 per cent. took a friend's advice; advertising prevailed with 12 per cent., and reviews with 10; external attractiveness captivated 9 per cent.

In observance of the Emerson Centennial, a memorial school will be held at Concord and Boston, during July 13—31, under the auspices of the Free Religious Association of America. Thirty lectures covering the various aspects of Emerson's life and work will be given by eminent teachers, both lay and clerical; in the morning at Concord, in the evening at Boston. Information as to tickets, etc., may be had of David Greene Haskins, jr., No. 5 Tremont Street, Boston.

—Messrs. Scribner have brought together in one very handsome volume eight papers on Bookbinding by Miss S. T. Prideaux, whose 'Historical Sketch of Bookbinding' has been reviewed in these columns. The essays now issued are taken from the *Magazine of Art* of Cassell & Co., from *Bibliographica*, from the *Book-Buyer* (now called the *Lamp*), and from *Scribner's Magazine*. They are an interesting lot. The subjects chosen are a little on one or the other side of the main line of inquiry, and are all the more agreeable and useful for that. The third paper is a review of Mr. Thoinan's book, 'Les Relieurs Français,' and allusions to the same work occur in other chapters of the present book; the whole constituting a very just and careful statement of the quality and value of the important book which Miss Prideaux reviews. The last paper, entitled "Some Notes on Pattern-Making," deals with the utilization of Persian and other Western Asiatic designs and their applicability to the work of the bookbinder. The other essays are all in a way historical; thus, the first deals with "English and Scotch Bindings of the Last [19th] Century," and the second with Roger Payne; others deal with Early Stamped Bindings and Early Italian Bindings; and chapter five devotes sixty pages to the French Binders of To-day, making of the inquiry into their work an extremely interesting paper. It is not necessary to agree entirely with the hopefulness of Miss Prideaux in order to praise, to enjoy, and to learn from her work. It is not given to all persons to view the struggles of the would-be decorator of the nineteenth and twentieth centuries with the same favorable eyes. The modern bindings which help to illustrate the article on Pattern-Making may be taken as of Miss Prideaux's own design, and we find these commonplace and insignificant as design. There is no particular reason why the scrolls and spirals should turn this way more than that way. So the work of the living Frenchmen, shown in the fifth essay, is often fantastical; they are violent, too, and the owner of some of them would find them much more agreeable if kept in a closed bookcase with solid doors, to be brought out occasionally to point a moral rather than to have them on view. At the same time, the criticism which Miss Prideaux offers is sane and reasonable, and we like particularly what is said on page 135 about the mistaken notion that "the decorative outside of a book should be emblematic of what is within." That indeed is "a complete snare to the craftsman who is not an artist."

—The England of three hundred years ago knew little of numismatics. King James's translators in Genesis put "money" for silver, which was not minted till about 700 B. C., and in the Gospels rendered denarius by "penny," when sixpence (a piece familiar from Edward VI. on) would have been nearer the mark. A century later, Addison wrote on "Ancient Medals," meaning coins, with possibly a medallion here and there. These gaps have been filled in since: the British still say "Roman brass" for the bronze issues, very few of which, through the first century or so, were really brass; but that is mere conservatism, like the *u* in "honour." With us it was worse. Our auction catalogues of twenty years ago were often barbarously ignorant of ancient and foreign mintages, and a cyclopædia could illustrate Antoninus Pius by a coin of Caracalla, who used the better man's name. We too have mended our ways in this regard; the superior sort of dealers have admitted light from abroad, and plume themselves on the accuracy of their descriptions. Numismatics, hitherto regarded as the serious study of a few specialists and a harmless recreation for such as have time and money to spare, with a taste that way, now claims to be a branch of knowledge for the multitude. A "Home and School Library," issued on both sides of the sea, puts forth among its first numbers 'A Short History of Coins and Currency' (E. P. Dutton & Co.), by Lord Avebury, better known as Sir John Lubbock. This unpretending manual, based on a lecture at the London Institution, handles the Origin of Money and the Coinage of Britain, with supplementary chapters on Weights of Coins and Banknotes and Banking. It contains many interesting facts and a full list of English coins from the Conqueror on, with good copies (light, on a black ground) of sixty-two pieces, mostly Greek, Roman, and British. The most notable, perhaps, of these is the tetradrachm of Selinus on page 22 (previously copied and described by Mr. Head), which celebrates the stoppage of a

pestilence about 450 B. C. by draining a marsh. This piece, as Lord Avebury says, "is an early recognition of sanitation, and might well be taken as a seal for the medical profession." The Judea Capta issues are not so rare that they might not have afforded a better portrait of Vespasian than that on page 36. Praise for the booklet is damped chiefly by the close stitching of the sheets, which (as in most American magazines) makes it difficult to hold open. This drawback is apt to be less oppressive in an English binding.

—A new number in Methuen's "Classical Translations" is 'Thirteen Satires of Juvenal,' by S. G. Owen, the well-known editor of Catullus and Ovid. Though he omits three satires as unfit for presentation in English, yet Mr. Owen regards Juvenal as a genuine reformer, actuated by right motives and sincere above any other pagan moralist of his time. He is hasty, however, in dubbing as "dilettanti critics" all who have questioned the satirist's sincerity. The services to classical scholarship of Boissier and Tyrrell, among the number, are certainly of too high a character to be requited by a depreciatory adjective from the pen of Mr. Owen. And M. Nisard, still more severe, is entitled to respect as a critic, however much his theory of criticism may be out of date to-day. In Mr. Owen's introductory tribute to his subject, the formal exigencies of the sonnet have wrought a measure of confusion in the thought:

> "And with the nimble scalpel of thy rime
> To excise the ulcers of a festering age"

is a fine conception in itself, as are the closing lines,

> "Still thunders through the multitudinous years
> The glory of thy voice that is not dead."

It is hardly necessary to point out, however, that two such different conceptions can hardly apply to the same style. It is the voice of thunder, not the "nimble scalpel," that really describes Juvenal. Tyrrell flattered himself that the worst of the vices described in these satires died with the Roman Empire—a blindness to modern conditions which Mr. Owen does not share. The translation, in prose, is based on his own recension of the text, recently published at the Clarendon Press; an extended commentary is soon to follow.

—Dr. Emil Reich has views concerning the preparation of historical maps which have been accepted by the *Times* in its 'History of the South African War.' In the preface to his 'New Student's Atlas of English History' (Macmillan) he gives a brief statement of his opinions, and then proceeds to illustrate them at length by the publication of fifty-five charts. Hitherto Gardiner's atlas has held the field, and it is by no means superseded now. Nevertheless, Dr. Reich furnishes a great deal of fresh material, and whether or not one accepts all his theories of map-making, this volume also wins a place of its own. In many ways it is more advanced and technical than Gardiner's atlas, while the presence in most cases of an explanatory text is a notable feature. "This atlas," says Dr. Reich, "is intended to aid the student of English history both in comprehending the leading historical facts and tendencies, and in retaining them in his memory. It attempts to be a cartographic supplement to John Richard Green's 'History of the English People.'" Fifteen years' experience as a teacher of history has convinced the editor that historical events must be projected on a map if a clear and permanent idea of the past is to be gained without disproportionately hard study. Historical facts, he reminds us, "are mostly not static, but of a decidedly dynamic nature." Therefore, graphic methods of map-making must be employed. The idea of movement must be accentuated, and this can best be done by the aid of colored arrows. Examiners of all grades, but particularly those who are going forward to Sandhurst, Woolwich, and the civil service, may be expected to prick up their ears when Dr. Reich says: "The average student will, by the aid of such maps, acquire a firm grasp of the sequence and connection of historic facts, and, it may confidently be added, in one-tenth of the time hitherto needed for that end." These are bold words, but Dr. Reich's maps undoubtedly have their function. The chief things that can be said against them are that they seem complicated with their network of erratic arrows, and that in their search for movement they tend to neglect physical features. By way of replying to the first objection, the editor says that the maps must be traced with the aid of the text. Then the complications will disappear. In very heavy type we are told that "the student [we may add the critic too] must in no case satisfy himself with merely looking at the maps; he must invariably first trace them several times, following the text, and then try to draw each map from memory." Whether all students and critics will realize this high degree of expectation, may be doubted. For the latter, it is not necessary that they should do so in order to recognize the real value of Dr. Reich's system. In the delineation of campaigns it is especially admirable; and partly, perhaps, for that reason Dr. Reich gives much space to the military aspects of history. He has not, however, sacrificed everything else upon the altar of warfare. The maps of Sussex according to Domesday, of Feudal England, of the Enclosures of the fifteenth and sixteenth centuries, and of the monasteries at the beginning of the Reformation, emphasize those social motives in history of which Green, Dr. Reich's authority, thought so much. We doubt whether this book will lop off nine-tenths of the labor involved in learning English history by old methods, but it is certainly an indispensable volume for all systematic students.

—In the March number of the *Deutsche Rundschau* of last year, Prof. James Taft Hatfield of Northwestern University gave preliminary announcement and a careful analysis of hitherto unpublished letters and a diary of the poet Wilhelm Müller, author of the "Griechenlieder," which the poet's son, Prof. Max Müller, had recently found among his family papers. This material Professor Hatfield has now, in conjunction with Dr. Philip S. Allen of the University of Chicago, brought out in a handsome volume, entitled 'Diary and Letters of Wilhelm Müller,' which is a credit both to the editors and to the University of Chicago whose imprint it bears. While Müller is not a great personality in any sense, he is certainly a very characteristic representative of later German romanticism, its lyric charm, its easy grace, its playfulness and youthful enthusiasm. This impression, conveyed by all of Müller's poetry, is strengthened by the present publication, especially by the diary covering his Berlin stay, from October, 1815, to December, 1816. In reading these sentimental effusions on love, on friendship, on purity of heart, on religion, on meekness, on cultivation of the inner life, one finds it hard to realize that they were written by a youth who had just returned from the battlefields of the Napoleonic wars; but one gains a new sense of the elevation of thought and feeling which, after all, was the most fundamental of the forces that made the rising of the German nation against the foreign oppressor possible. It must be confessed that Müller's letters, especially those to his wife, have the effect of an anti-climax: they reveal him as spoiled by success, vain, and superficial.

—The current number of the Neapolitan journal, *La Critica* (May 20), aside from a striking study of Edmondo de Amicis by the editor, Signor Croce, a paper on contemporary Italian philosophy by Professor Gentile, and the usual number of important reviews, contains a brief but highly significant correspondence between Signor Croce and Signor Corrado Ricci, the well-known Director of the Royal Gallery at Parma, grouped under the general heading "Il Monoteismo Dantesco." These letters are of particular interest because they indicate a healthy reaction against that surplusage of critical work devoted to Dante which has been a distinguishing feature of Italian scholarship in the latter part of the nineteenth century, and which has tended throughout to obscure the philosophic continuity of Italian literature. These supererogatory Dantists, says Signor Croce, "had they lived thirty years ago, would have discussed the unity of the language; seventy years ago, purism and anti-purism; if in the eighteenth century, they would have recited sonnets in Arcadia; if in the seventeenth century, cogitated conceits and anagrams; if in the *Cinquecento*, composed dialogues on Platonic love or discourses on a sonnet or a verse of Petrarch or Monsignor della Casa." The exclusiveness of their interest in Dante is due, "not to an excess of love for the great poet, but solely to an innate indifference to art itself." It would be well for our own Dante scholars to give some attention to these considerations. Mr. A. J. Butler, in his recent preface to Federn's 'Dante and his Times,' in like manner complained that the study of Dante at the present time "is not part of any general interest in the Italian language and literature, which, in England at all events, still suffer under 'the deplorable and barbarous neglect' perceived and lamented by Mr. Gladstone a quarter of a century ago."

—In 'Kant's Prolegomena to any Future Metaphysics, edited in English by Dr. Paul Carus, with an Essay on Kant's Philosophy, and Other Supplementary Matter' (Chicago: Open Court Co.), we find a careful and excellent translation of a work whose importance Kant's students sometimes fail to appreciate, while the present editor extravagantly says that it "is indubitably the most important" of Kant's writings. What is *indubitable* is doubted by no competent person. Dr. Carus perhaps refuses this title to all other writers on Kant. He says in

the preface: "The present translation is practically new, but it goes without saying that the editor utilized the labors of his predecessors, among whom Prof. John P. Mahaffy and John H. Bernard deserve special credit. Richardson's translation of 1818 may be regarded as superseded and has not been consulted, but occasional reference has been made to that of Prof. Ernest Belfort Bax." We are glad Dr. Carus did not let it go altogether without saying that he had "utilized" the translation of Mahaffy (published only after revision by the Rev. Dr. John Henry Bernard); but his readers might have preferred to be informed of the extent to which such utilization went. In point of fact, Dr. Carus's "practically new" translation agrees, in all but a small percentage of its matter, with that of Mahaffy *verbatim et literatim;* and this would seem to be dictated by good sense, supposing Mr. Mahaffy consents. Why make a new translation where an existing one is good? The most striking difference is that Mahaffy prints in italics the phrases which Kant spaced to the same effect. There are also some quite trifling divergencies in the translation of a few of Kant's technical terms. A few idiomatic expressions have been more familiar to Dr. Carus, and here the changes, though small, are unquestionable improvements. It may be added that Mahaffy's translation was in part based on that of Richardson, though the alterations are so great that the fact would hardly have been discoverable without Mahaffy's statement of it, duly made in his preface. The "supplementary matter" consists, one half of it, of selected extracts from various writers, all well worth reading and some of them decidedly amusing for the reflected light they throw on their authors. The other half is Dr. Carus's account of Kant's philosophy. To our thinking he subtracts somewhat from Kant's doctrine and thus renders it more acceptable, without beginning to cut deep enough to meet the exigencies of modern reflection.

—President Roosevelt's political oratory during his late far-Western tour having secured adequate attention, a little space may properly be given to some of his other utterances. In one of the first speeches he informed the representatives of an athletic society that he was always in favor of "vigorous, rough, athletic sport." Few people now would differ from him as to the value of vigorous and athletic sport; but with President Roosevelt the distinguishing mark is roughness. There must be collision, there must be human bodies hurled against each other in intentional shock; there must be danger—nay, certainty—of pain, with great probability of wounds or even of fractures; because no boy or youth is fit to enter on fighting, which is the essential business of life, till he has shown that he is tough and not tender, hardened and not sensitive, rough and not gentle. The President's pet word thus cuts out the great majority of athletic sports and their votaries. His favorite roughness—collision, pounding, crushing—plays no part in walking, running, leaping, riding, swimming, rowing, sailing, tennis (whether in the court or in the field), golf, basketball, or fencing. In running, indeed, anything like a collision is absolutely foul play. In baseball there are occasionally rough collisions; but they are directly forbidden by the rules, and are always considered unsportsmanlike. There are three sports where roughness is part of the play—wrestling, which is scarcely known among us, and the President's beloved boxing, and football. The most elaborate course of gymnastic exercises—including the tug of war—does not call for roughness; and in the very hardest athletic sport of all, which involves the most exhausting work, the most careful eye, hand, and foot, the most submissive discipline, viz., mountaineering, tenderness—the most careful and delicate avoidance of everything which can hurt or hamper our comrades—is peremptorily required. What a poor, nerveless, "sissy" set of men, then, the majority of athletes must be, never to bruise or pound, or knock down or trample each other!

SCOTCH SURVIVALS FROM THE CELTIC WORLD.

Outer Isles. By A. Goodrich-Freer. E. P. Dutton & Co. 1902. Pp. xvi, 448.

Witchcraft and Second Sight in the Highlands and Islands of Scotland: Tales and Traditions Collected Entirely from Oral Sources. By the late John Gregorson Campbell. Glasgow: James MacLehose & Sons. 1902. Pp. xii, 314.

Evil Eye in the Western Highlands. By R. C. Maclagan, M.D. London: David Nutt, 1902. Pp. viii, 232.

The fate of the Hebrides, inner and outer, has been a strange one. Their name — sprung, says the story, from a fortunate misprint of the Plinian Hebudes — has a dying cadence which has charmed poets of all times with visions of a magic outer world. To the young Milton, "the stormy Hebrides" came with the fable of Bellerus old; Collins gives one of his smoothest lines to "the moist marge of each cold Hebrid isle"; and by Wordsworth the beauty born of its murmuring sound was fixed "in the silence of the seas among the farthest Hebrides."

But known thus as a name powerful to raise visions, they have remained unknown in themselves — an Avalon or Hy Brasil within sight of our shores, but ever retired from our life. Tourist steamers may trail their smoke pennons to and fro among them: they have remained aloof in proud, almost mystic solitude, untouched with any stain from our commonness. Again and again they have been discovered, again and again have sunk back into their former inaccessibility, a piece of the older world. Johnson felt their spell, but how could he interpret these fairy mysteries? Collins, though he had never seen them, came, too, beneath that spell, and his great ode has atmosphere and understanding alone in its time. After Scott's one voyage he heard the roaring of their skerries till he died, but his verse could not render Celtic melodies. Our classical and semi-classical ages and our period of Teutonic romanticism had no kinship with the still older world of the Celt, an Oriental castaway on gray, northern shores illumined by a scanty and slanting sun. In later times, Alexander Smith knew and told of them and their people, and Robert Buchanan, too, in his saner days. As for William Black, his West Highlander is much like the Irishman of Lever; yet no one has pictured as he the magic of the land itself. Such few tellers have there been of a sea and shores whose secret baffled their utmost seeking.

And in this sacred isolation there was its own fitness. These isles were holy in their day. There is hardly one, even of the smallest—some bare rock—which has not its ruined church or remains of hermit cells. By way of them the Christian civilization of Ireland passed back to reconquer Western Europe: round them the religious life of three realms gathered. Iona, with its long roll of buried kings, was but the head of numberless settlements of monks and hermits on the islands scattered down the coast. Now, all that is left is these remains of churches or of clustered beehive houses, with here and there a broken Celtic cross, perhaps with an inscription in the Celtic character—these, and names and traditions persistent in the memory of the people, and a remnant in the farthest islands still clinging to the old faith.

And so, strange as it seems in fiercely Protestant Scotland, there still survive there whole communities untouched by the Reformation, whose life lies in the days of the Fingalians, of Ossian, Saint Columkille and Saint Bride, for whom the Old World romance is blended with the Old World belief. It is of these especially that Miss Goodrich-Freer, herself of the Roman Church, tells. In the Celtic renaissance which is upon us, her book must hold an honored place. The sentimentality, the vapid æstheticism, the sham mysticism, the strained preciousness of word and idea which have marked so many of its kind are lacking from it. Its reader feels sure that from point to point his contact is with actual, living men, not with ghosts returned from a hypothetical Celtic age. This realness, joined with an essential strangeness, is what makes its charm. Thus its picture of a simple-minded Old World Catholicism, shot with colored threads of imagination straight, one would think, from the 'Morte d'Arthur,' is drawn after the life from fishermen and crofters evidently of our day and facing its economic problems. It would take Cervantes to deal fitly with a people who can wall so absolutely in two worlds, and even Don Quixote nowadays would have found it hard to lay a lance in rest for Prince Charlie. But this strange race sing of him still as a fair maiden by his secret name of Morag; are Jacobites of more authentic descent and more unswerving fidelity than any of our absurd sectaries of the White Rose; and are, for all that, excellent subjects of the present reigning house. Again, to education there is with them the most absolute devotion, and they have in it a singular success. Their hard life has not thinned the keen Celtic brain to stupidity, as with the typical peasant; the centuries of ecclesiastical environment, it may be, left their mark too deep. But though they thus are schooled in the present, their thoughts are in the past. Broken fragments of the rich old mythology are still part and parcel of their common faith. The Carnegie endowment and a world of second sight, fairies, and omens jostle each other for them.

All this Miss Freer, guided by close sympathy and large knowledge, puts before us. To an equally excellent treatment of the crofting and fishing questions, of antiquities, and especially of the traditions and remains of the Norsemen and of eccle-

siastical life and differences, only allusion can be made. Miss Freer is the last discoverer of these isles, and her record is full and illuminating.

The book by the late J. G. Campbell is more limited in its scope and detailed in its treatment. It, with its companion volume on the 'Superstitions of the Scottish Highlands,' published two years ago, is practically an attempt to gather up the surviving fragments of the Celtic mythology. This volume embraces witchcraft, black and white, death warnings, second-sight and the Celtic year. The greater part of the former volume was devoted to fairies and kindred creatures, such as brownies, mermaids, kelpies, and water horses. The almost unique value of both volumes can hardly be exaggerated. Mr. Campbell was minister of Tiree for thirty years. He was in close intercourse with his people, and had, evidently, a singularly objective mind, which could fix and retell what reached it without admixture or change. Thus it is always perfectly easy to separate from the recorded fact the comment or explanation which he sometimes adds. No one will be misled by his derivation of "summer" on p. 226, or by his explanation (p. 184) of the protection afforded by a running stream as due to the shock of cold water arousing the traveller from his fancied terrors. A more essential point for criticism is the distinction made between the spirits controlled by witches and the uncontrolled and uncontrollable fairies. There can be little doubt that this is not fundamental, but has originated under Christian influence. Fairies and devils, for the heathen Celt, as for the heathen Arab, in all probability, did not stand generically apart. A comparison, indeed, between all the spirits detailed here and the numberless phases and manifestations of the Jinn in Muslim superstition suggests itself at every turn to the Orientalist. Of special interest is the gradual but only partial development in Islam of the division apparently completed among the Celts. Muslims have never lost consciousness of the identity of Ifrits and Satans with the Jinn.

Another point of agreement is the comparative lack of ghosts, in the true sense, on both sides. Among the Celts, this is balanced, in a way, by an extension of the doctrine of "the double." A man may have a ghostly double which wanders about absolutely independent of him, though there is a tendency for the owner of a double to follow after a time in its traces. Thus there comes about a kind of anticipatory haunting, with, to our ideas, the most topsy-turvey consequences. The scene of a murder or some catastrophe is marked out for gruesome things by weird occurrences there, long before its time. The result is a number of ghost stories of striking effectiveness, produced, perhaps, by the impression of connections and causations backwards as well as forwards, uniting the unseen and the seen worlds closely together. Of other stories, almost equally effective, there is an abundance here. The parallels, for example, to the story of the King of Cats go far to make it much more intelligible; there is a queer analogue to the story of the ring of Venus, in which Michael Scott plays the part of the magician; above all, there is the tale of the tailor and the Long Gray Paw; well told, it will give shudders to the most hardened.

Of Dr. Maclagan's study, little need be said. It is an admirable, if somewhat monotonous, collection of material bearing on the evil eye, tending to liveliness only where the professional feeling of the "qualified medical practitioner" comes in. One lexicographical result may be worth citing. The Century Dictionary notices "blinked" as applied to milk or beer in the sense 'turned stale or sour,' but gives no explanation. The Oxford Dictionary gives as one alleged explanation that the milk has been looked upon by an evil eye, and as another that it is due to lightning or the sun. In view of the usages in this book, the evil-eye explanation seems almost certain to be right. To the knowledge of the present reviewer, however, this origin of the word had dropped out of consciousness thirty years ago in the west of Scotland, and "blinkit"—so pronounced, like "stickit"—milk meant there simply milk slightly soured or turned by any cause.

MISCELLANEOUS BOOKS ON ART.

Michael Angelo Buonarroti. By Charles Holroyd, Keeper of the National Gallery of British Art. London: Duckworth & Co.; New York: Charles Scribner's Sons. 1903.

Botticelli. By A. Streeter. (Great Masters in Painting and Sculpture.) London: George Bell & Sons; New York: Macmillan. 1903.

Leonardo Da Vinci. By Georg Gronau.—*Millet.* By Romain Rolland.—*The French Impressionists* (1860-1900). By Camille Mauclair. (The Popular Library of Art.) London: Duckworth & Co.; New York: E. P. Dutton & Co.

Art in the Nineteenth Century. By Charles Waldstein, Litt.D., Ph.D., L.H.D., etc. Macmillan. 1903.

The Meaning of Pictures. By John C. Van Dyke. Scribners. 1903.

Pictorial Composition and the Critical Judgment of Pictures. By H. R. Poore, A.N.A. The Baker & Taylor Co.

The Old and the New Renaissance. By Edwin Wiley. Publishing House of the M. E. Church, South. 1903.

Part first of Mr. Holroyd's book, consisting of about 90 pages, is a translation of Condivi's 'Life of Michael Angelo Buonarroti'; part second, of about 160 pages, entitled "The Works of Michael Angelo," consists of a sort of running commentary on Condivi, and is illustrated with some fifty half-tone plates. "For convenience of reference, the chapters in the two parts are divided so as to cover the same periods of time in the life of the master." As an appendix, we have Francisco d'Ollanda's "Dialogues on Painting," in which Michelangelo is one of the interlocutors, "translated from the Portuguese with the help of Mr. A. J. Clift." Condivi's Life has been used by all the biographers of Michelangelo, beginning with Vasari, and extracts from it are common, but, we are assured, it has never before been translated in its entirety. Many parts of it were undoubtedly inspired by Michelangelo himself, and it is the most valuable single writing on the subject which exists. To translate it was a happy thought. The present translation reads smoothly. It differs greatly, at some points, from the extracts given by Symonds, and we are unable to judge which translator is the more accurate, though Symonds's version generally seems, intrinsically, more probable. The "Dialogues" of Francisco d'Ollanda has an apocryphal air, and the speakers talk remarkably alike. One doubts if it has any value as a record of Michelangelo's opinions, but it is rather interesting as a piece of sixteenth-century dialectic and a glorification of painting and painters. Most of the matter in the second part is, of course, to be found elsewhere, but it is judiciously selected and mingled with shrewd observations of Mr. Holroyd's own. Taken altogether, the volume gives in a convenient form almost everything that the "young student," for whom it is intended, will need to know about Michelangelo, and will prove a safe guide to his works. The illustrations are well chosen and pretty well executed. We are especially grateful for the engravings of those frescoes in the Pauline chapel which every one writes about and no one publishes.

Mr. Streeter's 'Botticelli' is a very good specimen of art criticism *à la mode.* Next to nothing is really known about Botticelli, and "there is as yet no direct clue to the dates of a majority of [his] pictures," but, as "a classification according to *period* . . . is clearer and more critical than a classification according to *subject*," and as it is desirable "to reconstruct the artist's life-work in the order of its natural development," a chronology must be made out somehow, mostly by the aid of wild guessing. The "Primavera" is variously dated by the "authorities" 1478 or 1483-84. The latter date was suggested by Signor Supino partly because of the manifest connection of the picture with Poliziano's Latin poem, "Rusticus," written in 1483, which "describes the assembly of the gods in the springtime as including precisely the same figures as those represented in the painting." Mr. Streeter first accepts the earlier date, purely on evidences of style, and then gravely remarks that "a comparison of the respective dates of the picture and poem is sufficient to refute" the theory that the former is founded upon the latter. Recast in the form of dialogue, the argument is something like this:

Supino—The picture must have been painted after 1483 because it is founded on a poem of that date.

Streeter—But it wasn't founded on that poem.

Supino—How do you know?

Streeter—Because, if the picture was painted in 1478, it must have preceded the poem.

And Signor Supino is triumphantly refuted.

Another instance of the same sort of thing may be given. There is in the Uffizi a portrait which is "generally supposed" to represent Giovanni dei Medici. Mr. Streeter says:

"As a portrait, if that surmise is correct, it is of less interest than the preceding one, as it canot have been painted from life. Giovanni having died in the year 1461. In the strong, intellectual features Botticelli shows his power of reconstructing a vigorous and commanding personality."

A painter would have said that, as the head manifestly *was* painted from life, it was either not a portrait of Giovanni or was not by Botticelli. A painter could have told Mr. Streeter, also, that the pose of the Christ-child's hand, and the absence

of cast shadow, show that the miniature crown of thorns and the nails in the Poldi Pezzoli "Madonna" are probably later additions, and that some one else than Botticelli is to be credited with the "deep pathos in the inspiration" which placed them there. By some hocus-pocus that some one should have detected, the plate of the "Primavera" is reversed, and is a puzzle to the uninitiated and a trap for the unwary.

The three latest additions to the Popular Library of Art are all excellent little books in their different ways. Dr. Gronau is clear and adequate in his account of Leonardo's life, so far as it is known to us. He confines his discussion of the master's art to such works as are universally accepted as his or are certainly known to have existed, and says as little as possible about disputes as to authenticity. With Leonardo as scientist he does not deal, nor would it be possible to do so on the scale of these volumes. The translation, by Frederic Pledge, does not always avoid a certain stiffness, but is generally clear and readable enough. It is noticeable that almost every drawing included in this volume gives more or less clear evidence of having been done with the left hand. It is astonishing that this test is not more generally applied to the many so-called Leonardo drawings.

M. Rolland's 'Millet' is an admirable piece of criticism, and gives in brief compass a truer idea of the artist and his art than anything else we have read. All that the author has to say of Millet's religious nature and of the relations of his work to the great classical art of the seventeenth century is profoundly true. We have a feeling that he slightly underrates Millet's technical power as a painter in oil, and yet that master's greatest technical achievements, in the solid modelling of earth and the perfect register of retreating planes, are clearly recognized. It is only the grave beauty of Millet's color, at its best, that is, perhaps, a little underestimated. The pure beauty and exquisite grace of "The Goose-girl," bathing, are no doubt exceptional in Millet's work, but his capability of expressing such qualities should not be ignored. The translation, by Miss Clementina Black, reads like original and forcible English. There are a few typographical errors, of which the only serious one is that on page 78, which gives the "Funeral at Ornans" to Corot instead of to Courbet.

The translation of M. Mauclair's little book on the French Impressionists is, unfortunately, too literal to be accurate, and the reader who knows no French is likely to be misled. Otherwise, it is a good, if over-enthusiastic, account of what the school has intended and accomplished. Taken with an occasional pinch of salt, it is palatable and wholesome. It is, perhaps, not surprising that the printer has, on how many occasions we cannot be quite sure, confused Manet with Monet.

In his lecture on 'Art in the Nineteenth Century' Dr. Waldstein takes art in its widest sense as including literature, music, architecture, and the decorative arts, as well as painting and sculpture. He has therefore little difficulty in showing that the nineteenth century was really a great artistic epoch—an epoch, indeed, whose artistic activity may well be called "stupendous." The characteristic of this activity he considers to be expansion, "the expansion of the subject-matter of art" and "the expansion of the mode and vehicle of artistic expression." Of course he finds his case easiest to make out as regards prose-fiction and music, though painting has gone far in this direction, and even sculpture has done something, if one confines one's consideration mainly to the school of Rodin. The chapter on architecture is significantly short, and that on the decorative arts deals mainly, alas! with *l'art nouveau*. We have noted a few minor slips, of which the worst are the substitution of Jerome for Gérôme, and the bestowal upon Carolus Duran of a final *t*.

Good sense is the most striking characteristic of Mr. Van Dyke's book—good sense so great as almost to be provoking. What is the reviewer to make of a book that is always calm, and cool, and *right;* that is never rash, or extreme, or "eloquent"; that sacrifices nothing to brilliancy, and never indulges in paradox or gains force by overstatement? If not profound, it is eminently sane; if not stimulating to jaded palates, it will prove nutritious to sound stomachs. It is neither strong meat nor ginger, hot in the mouth, but good bread; and good bread is a good thing. In a word, Mr. Van Dyke's writing is not unlike Hamerton's, and is more likely to be useful than a great deal of cleverer work.

A good book on pictorial composition is a desideratum, and in Mr. Poore's essay we hoped we had found it. Mr. Poore is himself an artist of some ability and speaks from practical knowledge; he has evidently devoted much thought to the matter of composition, and his ideas, so far as we understand them, are sound; unfortunately his lack of practice as a writer, and some personal eccentricities of expression, make him very difficult to understand. An instructor who should devote sufficient time to the book would find in it many hints that might increase the efficiency of his teaching; but the unaided art student, who is the person likeliest to purchase such a work, would be apt to find it more puzzling than useful. An almost entire absence of precise references to the illustrations under discussion adds to the other difficulties of its study.

We need say little about 'The Old and the New Renaissance.' The author's interest in art seems wholly sentimental, and his special qualifications for writing of it are undiscoverable. His lectures might serve as a mild stimulus to that kind of interest in art which sometimes exists among people who never see pictures and seldom read about them, but feel that it is a privilege to hear about them from some one who *has* read even if he has not seen. This is hardly reason enough for printing them, however.

Greater Russia. By Wirt Gerrare. The Macmillan Co. 1903.

If the English and American public are still in a state of rather crass ignorance about Russia and the Russians, it is not from lack of quantity of recent literature on the subject. Besides a flood of magazine articles of varying merit, the last years have witnessed a number of books of a more or less serious nature which have undertaken to describe the Empire of the Tsars from almost every point of view, and especially in connection with the new Trans-Siberian railway. Mr. Wirt Gerrare's 'Greater Russia' is distinctly one of the most readable of these works. It is in no way profound—the author is obviously not a deep student; nor is it comprehensive, for a large and perhaps the best part of it is the narrative of his own personal experiences. On the other hand, the book is decidedly well written, being lively, interesting, and, however superficial, pretty fair in its distribution of praise and blame. We may regret that the writer shows such readiness to make slap-dash generalizations on the strength of any single incident he relates; but though his opinions are hasty and his conclusions journalistic, his appreciations are in the main keen and intelligent. We can question a great part of what he says without being sorry that he said it. His first four chapters, "The Awakening of Russia," "Young Russia," "Industrial Russia," and "Agricultural Russia," can be compared with Mr. Norman's recent work. They are brighter and less careful. Here are two or three extracts, taken almost at random:

"The next natural product of importance is timber; of this there is in Russia and Siberia an apparently inexhaustible supply. It is not so large as American timber; much of it is at present inaccessible, and the science of forestry is neither understood nor valued. Much of the forest is birch, and birchwood makes the best paper pulp. This is an industry which is in its infancy; it must grow; and there is more than one fortune in it for the right people" (p. 30).

It is not true that the science of forestry is neither understood nor valued. In recent years the Government has made serious efforts in that direction. Of course very much yet remains to be done.

"In the 'New America' there is no initiative; all has to be brought in from the outside. Given the idea, shown the way, helped to a fair start, the Russian can go ahead with facility. The teacher is delighted; more apt pupils never were found. All goes well until the machinery wears or some little thing goes wrong; then things are at a standstill until outside help has been brought in to right them. If the same accident occurs from the same cause a second time, the Russian will be able to right matters, but if it is from a similar cause he is nonplussed. As a parrot speaks from rote without understanding, so the Russian workman does his task mechanically, and without comprehending, or attempting to comprehend, the why and the wherefore of the different parts of the more or less complicated tools he has to tend daily. He can do what he has done before, but in the simplest things he seems unable to trace the cause from the effect, or to remedy a trifling defect in a rough-and-ready but effectual way" (p. 40).

The statement contains a good deal of truth and not a little exaggeration.

"Throughout Russia the public—that is, the civilians—side with their own members in all conflicts with authority; and in a thronged thoroughfare the least disturbance may develop quickly into a riot which will need to be repressed by mounted gendarmes or the military. The Russian is of a very excitable temperament, and, whenever there is a show of feeling, both sides become more in earnest than the circumstances warrant. But for the praiseworthy forbearance of the humble officials entrusted with the maintenance of the peace, conflicts between the police and the public would be much more frequent and still more fiercely contested. If the people are in the mood to resent interference, it is sufficient that

they are opposed by some representative of authority for such trouble to ensue as will make both sides regret that a trifling point was contested. In short, there appears to be in Russia not an organized, but a natural opposition to the representatives of Government, and the most insignificant and unsuspected occurrence may serve for its manifestation.

"There is not the rigid repression that obtained years ago. The voice of the dissident is heard proclaiming loudly, and he is not molested. A street tram is delayed an unreasonable time at a passing place. The passengers do not take into consideration that some accident may have prevented the other car from arriving on time at the point. They clamor for the return of their fare, or insist that the car proceed on its journey; they stamp, beat on the sheet-iron advertisement-panels with sticks, and appeal to the police; he, fearing a disturbance near his point, simply orders the driver of the car to proceed, and, from that moment until it arrives at its destination, the passengers do not allow the man to stop anywhere a minute" (pp. 50-1).

This is interesting and important if trustworthy, as on the whole seems probable.

We read on page 52: "A quality the moddern Russian lacks is appreciation of the picturesque." This sweeping remark is apparently based on two examples.

Chapter V. is devoted to the "Great Siberian Railway," and is much like other recent descriptions. Of course, it is soon followed by "The Real Siberia." Further on, the account of the author's experiences on the Amur is particularly well written. As for his "In disguise through Mantchuria," it is also good, but we cannot help wondering if the disguise was really necessary. It was certainly not true last year, if it was in 1901, that Englishmen were not allowed to travel through the country; in fact, things have moved so rapidly that Mr. Gerrare's description of the Mantchurian railway is already antiquated. We have also not seen any confirmation of his discovery of a line from Khailar to Kalgan in Mongolia, at the Great Wall and not far from Peking. The Russians build so fast that, if this railway exists, it ought to be nearly finished by this time. An opinion worth noting even if not a new one is (p. 223): "The Russian treatment of the Chinese in war is more brutal than that shown by any civilized race to the most cruel savages. At the same time, the general treatment of the individual Chinaman by the individual Russian is far more humane than that shown to inferior races by Europeans and Americans generally." There is food for thought in this.

The last two chapters, "Russia's Manifest Destiny" and "Conclusions," contain about what one would expect in the way of lament, advice, warning, exhortation, and prophecy. Nevertheless, they are worth reading, and the book as a whole can be freely recommended, even if we must exercise care before accepting many of its statements.

Around the World through Japan. By Walter Del Mar. The Macmillan Co.

This handsome and well-illustrated book is, in its opening and closing chapters at least, built on the good old English plan. One will find here detailed and nearly complete directions for making a trip around the world, according to the approved British style. Though in the "luggage" you do not find yellow gaiters and hip bathtubs set down, yet in the long list of necessaries nearly everything else imaginable is. Mr. Del Mar's quotations of authors and his high commendation of Murray guides mark him at once as a typical "red-book man." The detailed outfit is for "a bachelor travelling first-class and having the best of everything," who will spend on an average about $10 a day, "not including cigars or wines, or the purchase of outfit or curios," though including cloth overshoes to be put over walking boots when entering Japanese houses or temples.

The author's route took him first to Ceylon, to which as a tourist he devotes three chapters, and to Java, where he was at first disturbed by the exhibition in a hotel at the midday meal of bare white legs, and even more so by the "display of the exuberant charms of the portly Dutch matrons, who, in rather scanty costume, loll about the hotel veranda or recline there on the long cane or bamboo lounges." He thinks the Dutch residents of the Far East lose much of their native modesty, and afford a striking contrast with their country folk in Holland. The Java mosquitoes, he declares, excel, in both power of music and perforation, those inhabiting the paddy fields of Japan or the swamps of New Jersey. By morning, the space in the bowls around the lamp is filled with heaps four inches high of dead insects. Along the roads in the interior he noticed great black clusters hanging to the limbs of trees. These at first sight seemed to be fruit of some sort, but further inspection showed that they were fruit-eating bats hanging head downward and asleep. The two chapters devoted to Java give little real information, and contain only the impressions of a superficial traveller who used the railways. Mr. Del Mar found that "India," in the mouth of a Dutchman, always meant the Dutch East Indies—that is, Insulinde, or Island India. At Singapore and Hong Kong, Macao and Shanghai he saw the usual sights, and his text reflects merely the talk of the hongs and clubs. Concerning the problems which arise between the contact of the white and yellow races, including the missionary question, he has very little that is original matter, and on every page, even when not printed, one may read between the lines "They say."

Japan was evidently the country to which the bachelor traveller's feet were from the first directed, and over one-half of the book is devoted to the country of the cherry blossoms. He arrived in Tokio just when the clouds of pink and white at Ueno and along the Sumida and in Shiba filled the air with their loveliness. Indeed, at a distance, the traveller could only with the aid of a field-glass make distinction between the white smoke of locomotives and the floral mist of the cherry trees. At a garden party he saw the Empress and the Emperor—

"the personification of the intense spirit of loyalty and patriotism which is the greatest virtue and chief civic characteristic of the Japanese. . . . Like his father, the Mikado Komei, his jaw is heavy and prominent, and the lips are thick and protruding, especially the under one. Under this mask of stolid imperturbability the Son of Heaven conceals his divine origin, his despotic power, and his modern statesmanship."

From Tokio the author took the train to Kioto, but it was a rainy day and he saw little of interest. Having no knowledge of Japanese history, except that hastily learned from the guide-book, his narrative is for the most part as flat as a Japanese poster, without the brilliant tints and effective lines of the latter. He journeyed also in the Island of Shikoku and eastern Kiushiu, and here, especially in Satsuma, he saw many interesting things and writes pleasingly about the industries, especially ceramics and sword-making. His return trip through the main island brought him through Nagoya and Hakoné. He visited northern Japan, Nikko and Asama Yama, but never, either in mind or body, strayed far from the beaten track.

It is in his seven chapters which discuss entertainments, the women, national characteristics, arts and artisans, trade and finance, that the author is most engaging; but he is nowhere profound or original, apparently lacks insight and all knowledge of the evolution of the Japanese, and his verbal pictures have slight literary charm. His reading seems scarcely to have extended beyond a few books of recent origin, and from these we get the scrapings rather than the pith. Occasionally he makes comparison with those portions of Europe within the usual run of travel which he has visited. He notes that "Japan is in fact a sterile country, largely volcanic, and with an area about the same as that of the State of Montana"; one-sixth of which is cultivated, while practically all the available land of the three chief islands is already under cultivation, the population exceeding that of the United Kingdom by about 9 per cent. Already the greater part of the principal islands is deforested. In many sections, the only trees now standing are to be found preserved in the grounds of temples. "In the sense that England, Scotland, and France are beautiful countries, Japan can hardly be considered to deserve the adjective." The pretty places in Japan are like plums in a pudding, and reports of the beauties of these isolated spots are exaggerated on account of their great contrast with the monotony and unattractiveness of the surrounding country. Concerning the relation between bachelor residents and the natives of both sexes, this author is an authority, for he took pains to interview many of his brothers of the single life. He finds that the resident scholars, teachers, and missionaries take too favorable a view, and idealize both Japan and the Japanese, while the dwellers in the ports are too pessimistic. It is in the writings of the "globe-trotter" like himself (p. 367) that a happy medium and a more just appreciation may be found. His return to the "silver streak" and London Club was made by way of Hawaii, California, and "the States."

After the very useful final chapter of "suggestions to tourists" there is a good index.

Les Sentences dans la Poésie Grecque d'Homère à Euripide. Par Trumbull Stickney. Paris: Librairie Georges Bellair. 1903.

The French, with their peculiarly keen sense for precise language, have maintained the literary use of the word which translates the Latin *sententia*, and is the true equivalent of the Greek γνώμη, "la sentence," the moral formula or general

reflection. We in English talk of the "moral" of a story, and we use the adjective "sententious" with a glimmering of its origin, but we are content to call any fairly concise expression of gnomic wisdom a "proverb." The general reflection is one of the most marked features of nearly the whole of Greek poetry, always profoundly moral; but there are the widest differences in its use and application. Compare the Book of Proverbs, the strength and austerity of its dark sayings, with the chatter of the fine ladies of Swift's 'Polite Conversations,' who bandy vulgar saws and sayings from sheer poverty of thought; the divergence is wide, but no wider than between the gnomic poetry of Theognis or Pindar and the proverbs that give subtlety to the simple middle-class conversations in the Greek mimes of Herondas or the fifteenth Idyl of Theocritus. Mr. Stickney does not digress to literary parallels, but one may note in passing how essentially similar is the tone of all current proverbial philosophy. The prophecy that his mother taught King Lemuel, her advice to one choosing a wife, echoes the acid wisdom of Semonides; and Hesiod's maxim that you should leave your relatives alone and be on good terms with your neighbor, is in the very words of Solomon: "Go not into thy brother's house in the day of thy calamity; better is a neighbor that is near than a brother far off."

In the field of Mr. Stickney's study, which does not include any poet later than Euripides, the actual rôle of the moral formula is varied enough. The writer's aim is to survey the gnomic element in the epic and elegiac poets, Pindar and the dramatists, and to define precisely in each case how the abstract moral truth was envisaged and expressed.

With Homer, of course, the tale's the thing. In the crowded hours of the Iliad the toilworn warrior may not sleep, much less think, but must sally out even in the dark night "amid the slaughter, amid the slain men, through the arms and the black blood." How different is the economy of the Indian epic! In the Mahâbhârata, as Mr. Stickney points out, the embattled armies wait while the hero is instructed in the ethics of war to the tune of fifteen hundred verses. One signal exception that does but uphold the rule will occur to every reader of the Iliad. "Why inquirest thou of my race?" cries Glaukos to Diomede. "As is the race of leaves, so is the generation of man." "C'est l'unique passage d'Homère où une pensée générale et le sentiment de la nature se rencontrent" (p. 49). But Mr. Stickney adds that, for the Greek, the image invoked is still, as elsewhere in Homer, the image of the individual man, of Glaukos, his action, his untimely death. The moral rhetoric of Hesiod was rudimentary; hence the failure of the purely didactic epic with its paragraphic style. In the sententious elegiac we have the general reflection, with the addition of music and a more advanced rhetoric. In Pindar the logic is left out, and the result is the poem of vague religious meditation, so that we arrive at an antithesis between the moral and lyric and the moral and rhetorical, between Theognis and Pindar. Add to lyric the oratorical element in the form of iambic dialogue, and you have tragedy with its dramatized argument. That is to say, music obscured rhetoric in Pindar; and when in tragedy music falls into the background, it is the moment for Euripides, the "sophistischer Rhetor." Here, then, we see the basis of Plato's contention that tragedy and comedy are only public eloquence.

It is impossible to give more than this bare summary of Mr. Stickney's essay of 250 pages, itself concise enough. It is one of two theses presented by the author for the degree of Docteur ès Lettres, a degree that has not, we think, been taken previously by an English-speaking student. It is to be hoped that Mr. Stickney's example may stimulate other American students to choose Paris for the scene of their graduate studies. It would be a great gain for classical studies in our universities if we could import the French clarity of thought, the definiteness of expression, and the sense of style which are not always conspicuous in doctors of philosophy made in Germany. Mr. Stickney proves once again that French is admirably adapted for the translation of Greek, partly because it is so inevitably clear. For once, then, we have a doctor's dissertation that can be read with pleasure by any general reader who reads French. The mere fact would damn it at Berlin. Yet the scholar will find evidence of sound and up-to-date scholarship in this essay, and the "Litteratur" of the footnotes would defy the scrutiny of all the Teutons.

The proof-reading, however, is not above reproach. We note Kirchhoff almost always misspelled Kirchoff (p. 59); "poème" for "proème" (p. 117); Grenfelt and Oxyrrynchus for Grenfell and Oxyrhynchus (p. 204); Ajax for Agamemnon (p. 228); "Alk." for "Herakl. Main." On page 75 Mr. Stickney mistranslates a famous passage from Hesiod. We do not believe that *la misère* and *la richesse* are a possible translation of κακότης and ἀρετή. That the version is deliberate is proved by the translation on page 144 of ἀρετή by *la prospérité*.

An Introduction to the History of Western Europe. By James Harvey Robinson, Professor of History in Columbia University. Boston: Ginn & Co. 1903. Pp. xl., 714.

Though the purpose of the author in writing this book is nowhere definitely expressed, it is obvious that he has had in mind the needs of schools and academies. The book is, nevertheless, in no sense a "manual." The ideals of the artist are much more in evidence than those of the compiler. As we understand it, Professor Robinson has endeavored essentially to relate the history of Western Europe, within the limits of a single volume, in a narrative which shall not be too condensed to be clear and interesting, and from the reading of which the reader may get as good a notion as possible of the unity and continuity of western European history from the fourth to the twentieth century, by having his attention fixed mainly upon the political, intellectual, social, and economic forces which have, step by step, transformed Europe of the fourth century into Europe of the twentieth. Selection, emphasis, and effective presentation are consequently the keynotes throughout. Nowhere has the author scrupled to omit; nowhere spared pains to illuminate. If this method needs any justification, it has been furnished in the present case by the specific reference to readings, by the supplementary bibliography at the close of each chapter, by the promise of a volume, now in preparation, containing selected readings from the sources and from good secondary works, and by the maps, charts, and illustrations which accompany the text. The references have been made with great care and good judgment to books which are both satisfactory and accessible in English. Of the thirty-six maps, all are good, some especially useful, such as those on Christian Missions, Fiefs and Suzerains of the Courts of Champagne, Routes of the Crusaders, Ecclesiastical Map of France in the Middle Ages, Lines of Trade and Mediæval Cities, Voyages of Discovery, Salt Tax in France, Races of Austria, Hungary, etc. If the promised volume of selected readings be prepared with equal care, no better equipment for the teaching of history in secondary schools could be desired than these companion works will afford.

Those who have followed Professor Robinson's publications will not be surprised to learn that he has saved space by neglecting episodes and anecdotes "hallowed by assiduous repetition," for the purpose of paying some needed attention to institutions like the mediæval Church, and to "economic, intellectual, and artistic achievements." Of the 277 pages given to the Middle Ages (down to the fourteenth century) four chapters, aggregating fifty-five pages, have been devoted to a special consideration of the Church and its activities, exclusive of the Crusades and the conflicts between Pope and Emperor. In dealing with the mediæval Church the author has been more than usually successful. While the four special chapters are among the best in the book, the Church has not, so to speak, been pigeonholed in these four chapters. At every step the reader is made to feel that the Church was the all-pervasive and unifying force of the Middle Ages. There is perhaps no book in English, large or small, that shows so clearly the way in which the Roman Church assumed the discarded functions of the Roman State, until it became a great organization, not more religious than political and social—a social organization in the broadest sense, which held Western Europe together until the national state system was formed. The sequel to this story—the gradual but inevitable separation and nationalization of political, social, and religious functions, which constitutes the essence of the Reformation—is also indicated, though, we think, not with equal skill and clearness. The literary and artistic achievements of the Middle Ages and of the Renaissance have been treated in separate chapters. In the eighteenth-century period, however, the intellectual activity is considered in connection with political events, and it is here that the author has been most successful in showing the relation between the two.

A few unimportant slips may be mentioned. It is not quite accurate to say that by the Great Charter "the king is to impose no *tax* save the three stated feudal aids" (p. 145). In spite of the qualifying statement which follows this sentence, the beginner will hardly understand that export duties, for instance, were not included in the limitation. The office of *bailli* did not originate with Philip Augustus (p. 130);

it was merely made a general institution by him. Strictly speaking, not the pointed arch, but a supporting framework as distinguished from the enclosing material, was "the distinguishing characteristic of Gothic architecture" (p. 264). Mary Stuart's grandmother, not her mother, was the sister of Henry VIII. (p. 459).

Aside from these slips there are some points in which we believe the narrative might, in the hands of our author, be somewhat improved. The reasons for the rapid and comparatively easy conquests of Clovis might perhaps have been set forth with greater clearness (p. 36). The real significance of the first four Capetians is, it seems to us, incorrectly estimated. While their success was mediocre, their reigns were not barren of results for the house of France; they at least prepared the way for their successors (p. 121). The intimate connection between the ecclesiastical policy of Otto the Great in Germany and his interference in Italy has scarcely been given due weight (p. 149). While the treatment of Germany in the Middle Ages (chaps. 12-14) is, on the whole, admirable, there are three main tendencies in German history which might well have been placed in stronger relief, viz., the subdivision and decline of the old stem-duchies, the expansive movement east and west, and the consequent rise of new centres of influence on both frontiers, but more especially on the east. The reorganization of the Empire in the 14th century, and the subsequent history of Germany, are scarcely intelligible unless one grasps the gradual eastward movement of the centre of gravity in the German system. A modifying phrase introduced at page 239 would be sufficient to correct the impression that all French towns were "communes." The map illustrating voyages of discovery could be bettered by indicating the eastward movement of the Portuguese from India to the Moluccas (p. 349). The statement that Richelieu attacked the Huguenots "not only on religious grounds" (p. 457), might with advantage be so changed as to indicate that it was not *principally* on religious grounds that he attacked them. While it is technically true that the Declaration of Indulgence was issued by Charles II. "with a view of bettering the position of the non-conformists" (p. 491), this phraseology does not seem to us clearly to convey the precise purpose of the Declaration, which was issued primarily in the interests of Catholics.

These are matters of very slight importance indeed, and our suggestions are made merely with the desire that from so truly admirable a book even the slightest defects may be removed. To beginners and to schools Professor Robinson's introduction can be unqualifiedly recommended.

BOOKS OF THE WEEK.

For Sale.

MAINE COAST.

FOR SALE.—on Penobscot Bay—To settle a joint account—A tract comprising 400 acres of land with nearly 4 miles of shore front. The property comprises a number of bold headlands, fine rocks, coves, and beaches, is much diversified in its surface with woodland, hills and open fields, and commands everywhere most exquisite views of the bay, islands and mountains. The property is on the mainland in a central position and with a general southwest exposure. It is within half an hour by steam launch from the Dark Harbor landing at Islesboro.

This property will be sold at a low price per acre, and offers an exceptional opportunity for a gentleman wishing a large private estate, or for subdivision.

J. MURRAY HOWE & BRADLEE,
28 State Street, Boston, Mass.

ISLESBORO, ME.

FOR SALE.—An unusually beautiful point of land on the west shore facing the Camden Mountains, containing nearly 14 acres, and having nearly half a mile of water front with fine rocks, beaches, and bold shore. The land is diversified with groups of trees, woods, and open fields, and is adapted either for individual use as a whole or for subdivision into several lots.

Cambridge Modern History

Planned by the late LORD ACTON. *To be complete in 12 volumes.*

THE UNITED STATES

is uniform with Vol. I., "The Renaissance," and like it consists of a series of chapters the product of special research by leading historical writers. Among its American contributors are:—Dr. WOODROW WILSON (*President of Princeton University*), Professors J. B. McMASTER (*Univ. of Pa.*), J. C. SCHWAB (*Yale*), J. B. MOORE (*Columbia*), H. C. EMERY (*Yale*), BARRETT WENDELL (*Harvard*), T. C. SMITH (*Ohio State University*), M. M. BIGELOW (*Boston University*), and the late JOHN G. NICOLAY.

Cloth Royal 8vo. $4.00 net (carriage 30 cts.)

THE RENAISSANCE

"This is one of the most important books of our time."—*The Times, London.*

"If the twelve volumes maintain the standard reached in this the History will take its place alongside of the "Encyclopaedia Britannica" and the "Dictionary of National Biography."—*New York Times.*

Cloth. Royal 8vo. $4.00 net (carriage 30cts.)

The scope of **THE CAMBRIDGE MODERN HISTORY** *is to include*

I. The Renaissance.
II. The Reformation.
III. The Wars of Religions.
IV. The Thirty Years' War.
V. Bourbons and Stuarts.
VI. The Eighteenth Century.
VII. The United States.
VIII. The French Revolution.
IX. Napoleon.
X. Restoration and Reaction.
XI. The Growth of Nationalities.
XII. The Latest Age.

"Designed to be the most full, comprehensive and scientific history of modern times in the English language, or perhaps in any language."—**The Nation.**

It is expected that of the twelve volumes in preparation two will appear in each year; they are issued in two series, which begin with Vol. I., **The Renaissance,** and Vol. VII., **The United States.**

On net books ordered from the publishers carriage is an extra charge.

CROWELL'S POETS

The Quaker: a Study in Costume
King Charles I. of England wore Quaker costume when posing for the well-known portrait by Vandyke. The beautiful Miss Fitzgerald, lady-in-waiting to Queen Caroline, also wore garments of Quaker cut. In both cases the Quaker element entered after the event, i.e., styles once worldly became Quaker by adoption.
The origins and transmutations of Quaker costume are entertainingly explained and freely pictured in this beautiful volume by AMELIA M. GUMMERE. 8vo, half ooze-sheep, 240 pages, 75 illustrations, $3.00.

AN EDUCATIONAL DIRECTORY

I.—THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in THE NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

The Week.

Two classes of newspapers urge President Roosevelt to pay no attention to the growing demand for a new Postmaster-General. One consists of thick-and-thin party organs, which say that it would never do for the Republican party to have to confess that its chosen head of a demoralized Department did not display the energy that he should in the pursuit of corruptionists. The other is made up of Democratic papers and of those personally hostile to the President, like the *Sun*, which maliciously tells him that he did not put Mr. Payne in the Cabinet to do reform work, but to pull political wires, and that as long as he is doing the latter successfully, there is really no ground for removing him. The significance of this counsel we should think Mr. Roosevelt capable of fully appreciating. Meanwhile, Mr. Payne himself gives no public sign of wishing to relieve the President from an embarrassing situation. One more nudge has been given him, one would say, by the President's going over his head to appoint special counsel for the work of prosecution.

An amazing indifference on the subject of the performances of Perry Heath and the other proved violators of the law seems to prevail at Washington. The authorities incline to take the Dogberry attitude of thanking Heaven that they are rid of knaves. No serious inquiry appears to be made whether the statute of limitations really runs in favor of the said knaves, whether personal liability can still be enforced or restitution compelled. It is intimated that Heath may have a punishment greater than his sensitive nature can bear in being asked to resign from the Republican National Committee, in consequence of "the unfortunate light" in which he is placed by the Bristow report. But if nothing is really to be done to bring him to book, we do not see why Senator Hanna should not throw a protecting mantle about him, just as he has done about his other trusted but convicted lieutenant, E. G. Rathbone. Heath could make a strong plea as a party worker. No doubt most of his illegal acts were done to oblige Republican Congressmen. It was their "laborers" and "charwomen" that he put on the pay-roll. If no steps are taken to have justice done upon him, there is no reason why he should not again come forward as "a grand confidential man," and just the sort of unscrupulously efficient doer of dirty work that the Republican bosses delight to honor.

The talk of making the Post-Office thief-catcher, Mr. Bristow, Republican nominee for the Vice-Presidency illustrates a popular tendency which is partly good, partly bad. We desire to reward a man who has done a public service. We take a peculiar pleasure in honoring one who has exposed wickedness in high places. That is well; but it should not make us lose our sense of discrimination. It is still necessary to inquire whether the man is fit for the proposed office. The mere fact that he has trapped rascals does not of itself qualify him for other public duties. Recorder Goff was put into a judicial position, where he has not had exactly a conspicuous success, solely in consequence of the general demand that some sort of electoral reward be given the man who had turned Tammany Hall inside out. It may be hastily inferred that Mr. Bristow would find a good field for his peculiar talents in running down crookedness as presiding officer of the Senate; but the Vice-President is largely ornamental. He could put no inspectors on the bank accounts of Senators.

A sensible and peaceful solution has been found by the Attorney-General for the threatened difficulty between the Federal and State governments, in the matter of the battleships under construction which were seized for debt. While maintaining the general principle that the property of the United States cannot be attached, and asserting a quasi-ownership under the contracts with the shipbuilders, Mr. Knox discountenances, or thinks unnecessary, the violent proceedings which some of the bluff sea-dogs of the Navy Department favored. They were for going with a high hand and taking the vessels from under the very nose of mere State officers. But the Attorney-General quietly points out a more excellent way. Let the United States give an indemnity bond, as provided by statute, and then get the ships with the good will of all concerned, and without the sound of drum or cannon. This is lawyer's sense. The immediate question is laid by it, though no attentive mind can fail to see the great principle which lies germinant in the Attorney-General's main opinion. This is, that the general Government has power to see to it that the public business be conducted without local interruption. The application of that doctrine may come, in time, to be far-reaching. It may be invoked and, for all that we can see, with as good warrant, for Government interference with the next great coal strike, or with such disturbances of the smooth ongoing of Government functions as the vexatious strike on the Chicago post-office.

The Administration has retraced its steps in the matter of the opium monopoly in the Philippines. Secretary Root cables to Governor Taft that the plan of auctioning the right to sell the deadly drug must be abandoned for the present. Evidently, the protests of the religious and reform organizations against imitating the bad example of England, which we in this country have so often denounced, have had their effect in Washington. As long as it was only the querulous anti-Imperialists who complained, there was no occasion for action; but the case was different when the religious press began to speak out, after the manner of the *Watchman*. It said that American Christians were bound "in ordinary consistency" to protest against a traffic which they had condemned as "iniquitous" in British hands, since "the moral quality of such measures is not in the least affected by the name of the nation adopting them." We merely observe that the general application of this doctrine would undermine the whole system of Imperialist theology.

A horrible crime more horribly avenged, are the only words for the Wilmington lynching. Let us recall that the colored brute stood legally charged with his crime, and that there was no reasonable doubt that he would pay the penalty with his life. But the processes of the law, upon which the father of the murdered girl had begged his fellow-citizens to wait, were too slow for the maddened mob. The spectacle of law defied, a prison stormed, and a human being burned at the stake disgraces the State of Delaware, and again calls into question the reality of our religion and the efficacy of our civilization. Possibly the worst effects are to follow, for a community that has combined to override law is like a man who has once yielded to criminal fury. Morale is permanently impaired. Prison doors may be repaired and ashes swept from the high-road, all may look as before, but that community has acquired an insidious contempt for law, has committed the unpardonable sin against the State.

For a frank admission that the negro is robbed of his vote in the South, commend us to the *Observer* of Charlotte, N. C. It takes up the phrase about the ballot being only a "bauble" for colored men, and admits that it is now regularly taken out of his hands in the Southern States. It was done at first by force and fraud, but "this method became monotonous and distasteful, to such an extent that a Constitutional amendment which would legally accomplish what had hitherto been done by illegal means was

adopted." But the question whether it was legally accomplished is not yet decided. Nor is the question whether the penalty laid down by the Constitution for such abridgments of the suffrage shall be imposed. These considerations lend an uncommonly grotesque air to the proposal that the Fourteenth and Fifteenth Amendments shall now be repealed. It is very like a criminal asking for the repeal of the law under which he is to be tried.

Senator Blackburn pronounces for Senator Gorman as Democratic candidate for the Presidency, on the ground that capitalists would not "shrink" from him. But the value of that recommendation depends upon who the capitalists are, and upon the reason why Gorman has no terrors for them. Some of the Maryland Senator's activities have been of a sort to endear him to a certain order of capitalists. When he put himself at the head of the Senatorial clique in 1894, and did all he could to ruin the Wilson Tariff bill by loading it down with favors to protectionists, the selfish interests which used him did not, indeed, shrink from him. They fell upon his neck in their gratitude and joy. But there were those who then shrank from their party's betrayer—among them Grover Cleveland, who would not sign the law which Senator Gorman did so much to deform. Similarly, when the Senator endeavored to wreck the repeal of the silver-purchase act, there was a good deal of "shrinking" by honest men from his presence. Gorman may flatter himself that all these things are forgotten or forgiven; but if he seriously plots for the nomination, he will find that there will be plenty to shrink from him even if "capitalists" do not. Should he, by any malign chance, be made the candidate, the party vote would show an unparalleled shrinkage.

It has always been urged in favor of the Trusts that they are able at all times to command the services of the most eminent specialists in every detail of their business, to the ultimate gain of the public. If a new ore is to be analyzed, the most distinguished professors of chemistry gladly leave their academic chairs to do it; if a lawsuit is to be defended, an ex-Attorney-General of the United States is at hand. It is just so with Trust literary activities. When the Sugar Trust wanted to issue certain pamphlets, it sought everywhere for the man of all men best qualified to write them. The fact that this man turned out to be Lieutenant-Governor of Missouri, and that legislation affecting the Trust's interests was soon to come up in the State Legislature, is a mere incident. Of course his work was well paid. Great corporations can afford to be generous. And can $1,000 be called an excessive price for a brochure on sugar, when in England a mere writer of romances is receiving a dollar a word for his unprofitable narratives?

Illinois has arrived at the twentieth anniversary of the adoption of a high-license local-option system at a time when the trend of legislation throughout the country is decidedly in that direction. The abandonment of prohibition in Vermont and New Hampshire furnishes, of course, the most conspicuous examples, but similar tendencies are to be observed elsewhere. In Tennessee the privilege of determining whether saloons shall be licensed was this year extended to all places having a population of less than 5,000, the previous limit having been 2,000. The Virginia Legislature, we believe, has given to rural communities the right of choosing between prohibition, license, and the dispensary system under local management. The Illinois law grants complete local option to all localities, except that it fixes a minimum license fee. In a recent issue of the Chicago *Tribune* William H. Harper, the author of the law, reviews some of the results of this policy. One interesting fact which he points out is that a considerable number of cities have fixed license fees much higher than the law requires. At Joliet, for instance, the annual charge is $1,000. Mr. Harper is perhaps unduly enthusiastic when he says that the Illinois plan has "settled the saloon question" and "made the saloons decent," but it has doubtless "driven out the worst saloons and certainly shows gratifying results as a revenue producer." A dozen States of the West and Northwest have been satisfied with the working of similar statutes.

It is estimated that the operatives in the Lowell cotton mills lost fully $1,300,000 on account of their strike, which collapsed utterly nearly a month ago, and which has now been officially declared at an end. The operatives demanded a 10 per cent. increase in wages at a time when the market for cotton goods was dull and the price of raw cotton was mounting. Naturally, they did not get it, and when they threatened to strike they utterly failed to intimidate their employers, who were, in fact, quite willing to shut down for repairs while the market steadied itself. When, after two months of idleness, the mills were opened on June 1, most of the workers who could be provided for returned. Many were not taken back because they were not needed, and many must still remain idle, at least until the managers decide to run their mills to the limit of their capacity. This is a good example of an unnecessary, unintelligent strike. The results are disastrous chiefly to the laborers involved. If the Lowell workers are wise, they will make some searching inquiries into the common sense and good faith of their leaders.

"Vindication" is current cant for the reëlection of a rascal or other person of questionable character. Such vindication Walking Delegate Parks has received in full measure from his constituents of the Housesmiths' and Bridgemen's Union, who have given him a handsome vote of confidence. He will unquestionably continue to be a walking delegate, the courts will shortly decide whether he is a rascal or not, and he is sure to remain a questionable character, for a man against whom three indictments for accepting bribes lie—selected from many complaints—can hardly hope for complete moral rehabilitation. Apparently Parks is satisfied with vindication—that is, with a vote which proves that the members of his union either wilfully shut their eyes to evidence of venality, or do not care whether their leader and representative is venal or not. That these workmen have given him an unreasoning support shows how irresponsible the unions still are. As strategy, nothing could be worse than to meet a lockout on the issue of blackmailing walking delegates by reëlecting one whose honesty is justly suspect, and whose credentials are chiefly that he has ordered a thousand strikes.

Gen. Greene spoke out boldly on the excise question in his West End Lyceum address. "I will enforce no law to make it odious, or to make it anything," he said. 'I will enforce it because it is the law." This has the honest ring which the "Brooklyn plan" and the plan of "liberal enforcement" sadly lack. There is much nonsense in the talk about the effect of Gen. Greene's policy as outlined in this utterance. As he points out, it is not a question of a "wet" or a "dry" Sunday. It was so under the old law, but the use of these terms ought to have disappeared, even if they have not, since the Raines law went into effect. It is folly to talk of a dry Sunday when more than 2,000 saloons are legally permitted to be open. Gen. Greene says that these places, qualified as hotels under the law, have been examined and found to comply with the statutory requirements. Under these circumstances nobody has any power to close them up, and there can be no dry Sunday as long as they find it profitable to keep open. Gen. Greene is reported to have said that the law relating to saloons which are not hotels is being pretty generally enforced. If this is the case, something like a revolution has taken place very quietly, and the fact speaks volumes for what can be done by courage, determination, and executive ability combined.

The Commissioner's declaration that police blackmail has not been absolutely done away with, but that the system has been broken in two and the pieces not put together, is undoubtedly an exact statement of what has happened since he took hold of the Department. Everything that can be accomplished by strict discipline and prompt, straightforward methods of administration has been done. The influence of the new spirit actuating the head of the Department has spread downwards and its effect has been distinctly manifest. But it may be doubted if a genuine and thorough transformation of police sentiment has as yet taken place. As Gen. Greene said in his address before the City Club on June 3, the rank and file of the police have been taught both by precept and practice to look upon blackmail as a comparatively trivial offence, and, in fact, as almost one of the perquisites of their office. They have traditions and habits of thought which have been too long established to be eradicated in a year or two. And while these have been largely laid aside for the present, there is a mental reservation with a large majority of the force to the effect that the old practices will be resumed when Tammany returns on January 1. The real transformation of sentiment will begin if that calamity is averted.

Mayor Low regards as a "regrettable mistake" the double relationship of A. B. Boardman of the firm of Boardman & Platt, as attorney of the Rapid Transit Commission and of the Pennsylvania Railway Company. He considers it fair, however, to say that Mr. Boardman has been relieved by the Commission from the consideration of all matters that might at any time come before it affecting the Pennsylvania Company. A vacation of this kind might be granted to Mr. Boardman without adding much to his spare time, but the main question is whether the Platts, father and son, were similarly relieved. We suggest to Mr. Henry George, jr., who seems to be conducting this John Doe proceeding, that he seek to find out how much legal service Mr. Boardman renders to the Rapid Transit Commission for the salary paid to him; also for what reason the Rapid Transit Commission retained him in the first instance. We can easily understand why the Pennsylvania Railway Company came to retain him. That experienced corporation thought that difficulties might be encountered in its progress through or under Manhattan Island which an able political manager could remove or mitigate. We acquit the officers of the Company of any design to gain the favor of the Rapid Transit Commission by employing its attorney. They know that the Commission will grant them anything within the Commission's jurisdiction which they can rightfully claim, and that they could not get anything wrongful even with the assistance of Boardman & Platt. So much is due to the reputation of the members, but it is not so easy to excuse them for retaining Boardman. They were under no stress or necessity; and when they did so, they sacrificed a part of their dignity and set an unwholesome example to the community. That was the "regrettable mistake."

The Irish Land Purchase act has been brought very near shipwreck on account of Mr. John Redmond's refusal to sustain Mr. Wyndham's compulsory minimum rate for judicial purchase. The spectacle of the entire Irish delegation voting against the Government and its majority reduced to forty-one is a very threatening one. Mr. Redmond left no doubt as to his position. If the Irish tenants are not to be free to make better bargains than those laid down in Mr. Wyndham's schedules, the Irish members are opposed to the bill. On this matter Mr. Redmond is right; for it is certainly preposterous to refuse to a landlord the privilege of selling his land by free agreement with his tenant-purchaser, and it is clearly superfluous to forbid a landlord to bargain to his own hurt. Mr. Redmond's criticism goes to the quick; for the bill is generally and rightly supposed to favor the landowners unduly. Upon this ground the Irish and the Liberals may fairly join in opposition. If they do, with all the Tory malcontents reckoned in, Mr. Balfour's shrift will be short indeed.

In threatening to withdraw the Land Purchase bill, Mr. Balfour swings a blade the back of which may bruise him more than the edge can terrify the Irish members, for that bill is all that stands between the Government and total debility. But it may be that the Irish, put to the choice between the land bill or nothing, will take their half loaf rather than the more ample, but empty, satisfaction of upsetting Mr. Balfour. In either case the alliance between the Irish and the Government has, through the rejection of the amendment for unrestricted purchase by mutual consent of tenant and landlord, lost all moral force. While morosely beating all they can out of Mr. Balfour, the Nationalists, as the *Freeman* tartly says, regard as cancelled any "obligations or gratitude," and stand ready to attack him when the fit time returns.

That you cannot handle an important matter while having no opinion about it, was shown on Wednesday week in the Commons when Mr. Balfour found himself suddenly challenged to state his attitude towards the Chamberlain plan for preferential tariffs. Undoubtedly, Campbell-Bannerman counted on this uncertainty in the Premier's mind when he asked him to give assurances that the Government was not secretly working towards protectionism. Mr. Balfour's answer lacked his usual tact. He not only let himself be drawn far beyond his original attitude of "open-mindedness," but he gave a qualified adherence to Mr. Chamberlain's programme in terms which one rarely hears from the courtly leader of the Unionists. He defended a policy of retaliation, and spoke of "penalized" British colonies, meaning only colonies which, like Canada, had not been able to maintain favorable tariff arrangements with other protectionist nations. Such language seems more appropriate to Mr. Chamberlain, who, curiously enough, appeared as the more moderate person, emphasizing rather the Imperial bond, and dwelling on the yearning of the colonies towards the Mother Country. But it is easier, of course, to be suave when you are sure of your own mind than when you are forced to a decision under duress.

England refuses to be represented at the festivities in honor of Peter I. of Servia, and the British Minister will for a time be conspicuously absent from the new court. The desire to discountenance the crime by which the new King reaches the throne will meet with general sympathy; but of the action itself it must be said that it is incomplete as a rebuke and impracticable as a general policy. While the British Minister remains in conspicuous seclusion near Belgrade, the affairs of England are, or should be, left in the hands of the envoy of some other Power. That is, England can safely condemn the assassination by ignoring the new government, only on condition that another Power condones the crime by recognizing the new order. It is questionable whether a nation or an individual has a right to exalt his own virtue at the expense of another's complicity with vice, and England, with the best of intentions, came perilously near to taking this ground. On the whole, the temporary withdrawal of the British Minister seems dictated by sentiment rather than wisdom; and diplomacy is a poor medium for the expression of sentiment. The Emperor of Austria, with characteristic directness, found the way to put his nation right in this matter. Feeling the inadequacy of diplomacy to express the moral indignation of his empire, he personally accompanied the formal and necessary congratulations with an explicit condemnation of the crime of Belgrade. One has only to compare the effectiveness of his few timely words with the weakness of the far more elaborate statement of the Russian Foreign Office to realize the impotence of diplomacy in these moral matters, and the value of a man.

THE PRESIDENT AND THE POSTAL SCANDALS.

Heads are falling thick in the Post-Office Department. The removal of Superintendent Metcalf last week was pretty obviously the work of President Roosevelt. Postmaster-General Payne went through the tearful act of dismissal, but the prompting evidently came from the White House. It was a wholesome step. Metcalf's own apology was his sufficient condemnation. The President saw the point at once, and gave the order for decapitation. But can he stop with that? Is there any hope of toning up a demoralized and corrupt Department without giving it a new head? Without the slightest animus against Postmaster-General Payne personally, we have come to the firm conviction that the crisis calls for his separation from the Cabinet—by a request for his resignation, if he has not the grace to offer it. We will put the case as succinctly as possible. On Thursday Gen. Bristow's report to the Postmaster-General was made public. It proves the Tulloch charges up to the hilt. By the unimpeached evidence of Government inspectors, by transcripts from the official records, it shows that systematic violations of the postal laws were practised by the direct orders of First Assistant Perry Heath and Postmaster-General Charles Emory Smith. It is mainly a story of petty thieving, infinitely base in conception, incredibly sordid in execution. Stealings of a few dollars here, illegal foisting of this and that name upon the payrolls for no services rendered, and the carrying of all kinds of suspicious favorites and impostors—the whole document reads like a brief abstract from the Newgate calendar, or a fragment of a report on sneak thieves in the Bowery. But it is absolutely convincing, and is acknowledged even by the Postmaster-General to prove that Mr. Tulloch did not begin to tell all the disgusting truth.

Now mark the sequence of events. This report of Gen. Bristow's was placed in Mr. Payne's hands on May 4. That mass of overwhelming evidence was, therefore, in his possession long before he gave out his partial and misleading summary of the Tulloch charges on May 16. Yet on that date he continued to characterize those charges as mere personal "grievances" and "glittering generalities," affirming that there was "no evidence—nothing but words." But he had in his desk all the while the most complete and damning evidence from his own subordinate, Gen. Bristow! How could a Postmaster-General who was both honest and capable take that amazing position? Did he intend at that time to keep the Bristow report under lock and key for ever? Was it his idea that, if Tulloch could only be sneered down the wind, the whole scandal could be officially smothered? If he thought so, and meant to do it, he is not fit for office morally; and if he did not perceive, or had not weighed, the crushing significance of the facts laid before him by Gen. Bristow, he is not fit mentally. In either case, he ought to be the next man to go.

On another phase of the postal scandals President Roosevelt shows a singular failure to grasp the popular point of view. As the *Evening Post's* Washington correspondent put it in his dispatch last Saturday:

> "His theory of the whole business is that there is enough that concerns the present day and the present Administration, without poking into matters to which the statute of limitations has attached on their criminal side, and which belong to the domain of his predecessors in office on their moral side."

The President is considering two aspects of the case, the moral and the political. As a man, he wishes to uphold moral principles; as a politician, he would not injure his party. Though some of his advisers may imagine a clash of interest, the two aims are in fact identical. The exposure of all the wrongdoers may harm individual Republicans, but it will enormously strengthen the party as a whole. To-day the Republican Administration is held responsible for this huge tissue of fraud, and nothing but a complete housecleaning can restore public confidence. The time for half-way work, for drawing the line at September, 1901, or March, 1897, or any other such date, has long since passed.

Though the moral side of the question is the more serious, little need be said about it, because the facts are obvious. The incentives to official wrongdoing are strong enough already, without stimulating our Perry Heaths and our Machens with the hope that if they can conceal their misdeeds for three or four years, they can enjoy their plunder in security and maintain unblemished reputations. Our officials should dwell in constant fear that even after the legal statute of limitations has saved them from the penitentiary, they may yet answer before the tribunal of public opinion. If President Roosevelt had succeeded a Democrat in September, 1901, would he still shrink from raking up the dead ashes of the past? His conscience, we think, would stir him to a fine burst of moral indignation.

His feeling now seems to be that former peculation and evasion of laws are purely private affairs, in which the public has no legitimate concern. But the public does not so regard the matter. The cause of this whole nasty mess is the belief that public office is a private business, from which every man should make as much as he can. The civil-service laws that were violated under the Cleveland or the McKinley Administration were not private rules of conduct, but the will of the American people. The money that was stolen was not taken from the pockets of the Presidents and their Cabinets, but from the national till. The public has a right to an accounting and will demand it at the polls.

The public is also aware that if President Roosevelt fails to go back to the beginning of this trouble, he can never reach the bottom or the top of it in his own Administration. Machen and Beavers and their syndicates were not the growth of a day or of a year. To understand their foul activity as the people have a right to understand it, Mr. Bristow and his assistants must follow the trail of corruption, whether it runs into the McKinley or the Cleveland or the Harrison Administration; and if there is any hesitancy about such thoroughness, that hesitancy is a step toward political suicide. The public knows little about the statute of limitations, and cares less. What it wishes to learn is not legal technicalities, but the names of the men who broke its laws and looted its Treasury. If their crimes are now outlawed by time, the public will regret the fact that the rascals are not to enjoy their deserts behind prison bars; but disappointment on this score will make it no less eager to get at the records of its own servants, so that it may deal wisely with them when they again ask for its confidence.

Only an expert can determine whether Perry Heath shall go scot free; whether the statute of limitations began to run the moment he violated the laws, or only after he left office and ceased to conceal the violations. But no expert is needed to determine the political effect of such a platform as this for the Republicans:

1. THE STATUTE OF LIMITATIONS.
2. LET US FORGIVE AND FORGET.

THE CANADIAN SITUATION.

The Ministerial situation at Ottawa has curious analogies with that at Westminster. Sir Wilfrid Laurier, like Mr. Balfour, is committed to a policy of general conciliation and compromise, while the part of disturber of the peace is played by ex-Minister Tarte, who may be called the late Chamberlain of the Canadian Government. As Minister of Public Works in Sir Wilfrid's Cabinet, he was the political manager of the Liberals, all-powerful in the Government stronghold, Quebec, and apparently as indispensable as Mr. Chamberlain to the Unionists. Again, Mr. Tarte broke with his colleagues in announcing without authority a policy of high protection and transportation subsidies. The parallel only fails at the end. Sir Wilfrid, feeling that high protectionist preaching was out of place in a Ministry traditionally committed to free trade and actually to the present low tariff, demanded and received the resignation of the rebellious Minister, thus enabling Tarte to do honorably outside his Cabinet what Chamberlain inside his is doing equivocally. Both have been roundly

repudiated by their respective Parliaments—Tarte through the defeat of the skilfully worded protectionist resolutions recently introduced by him; Chamberlain through the almost unanimous vote to repeal the war tax on grain.

Without pressing tediously the Plutarchan parallel, it is evident that the campaign for a British Zollverein halts badly, both in the mother country and in the colony most nearly concerned; and since Canada could probably give the deciding voice for or against Mr. Chamberlain's impetuous scheme, her present political situation has more than a parochial interest. Mr. Tarte, who leads a secession of unknown strength, and the Conservatives are the most vociferous friends of the tariff-union idea, but the least valuable. Their unselfishness is suspect, for they are working primarily for their pet programme of increased tariffs and bounties. That the sincere among them should not see that any increase in the Canadian schedules, at this time, complicates the already difficult relations between Great Britain and the other Colonies, evinces a very ignorant Toryism. Still, the protectionist campaign is being conducted with much noise and with considerable ability. Sir Wilfrid Laurier will have all he can do to meet it.

Towards the Chamberlain doctrine the attitude of the Administration press is non-committal, if not unfriendly. The official Toronto *Globe* resents the insinuation that nothing but a good tariff bargain can effectually bind the colonies to England, and appeals most eloquently to the dearer bonds of community of race and political ideals. The simple loyalty of the colonies, it feels, is a more valuable guarantee of Imperial unity than all the tariffs ever forged between Birmingham and the "illimitable veldt." Meanwhile, the official press shows greater interest in the renewed activities of the American reciprocity leagues than in the imperial visions of Mr. Chamberlain. Evidently the Prime Minister would prefer the immediate good of a fair treaty with the United States to the doubtful and remote advantages of Imperial federation.

This is a mood by which the flour-millers of Minneapolis and the Republican advocates of the Iowa idea generally should not fail to profit. In the present temper of the Canadian Ministry it would be easy for the Joint High Commission, should it be convened this summer, to agree upon a basis for a reciprocity treaty; while at a later time we may have to deal with a protectionism more violent than our own. It is highly important, then, that the Joint High Commission should meet, for Canada and the United States have every reason for adjusting their trade relations before the Canadian tariff policy is hopelessly warped by the Imperial idea. Obviously, Canada's emergency is the more crucial, for she may be asked to enter into a general tariff war and to expose her whole system of government finance to the hazards of a long and almost hopeless process of equalization. Sir Wilfrid Laurier has undoubtedly pondered Burke's challenge to a writer who wished to make the colonies contribute to the English Treasury:

> "Will he, in Parliament, undertake to settle the proportion of such payments from Nova Scotia to Nevis, in no fewer than six and twenty different countries, varying in almost every possible circumstance one from another? If he does, I tell him, he adjourns his revenue to a very long day. If he leaves it to themselves to settle these proportions, he adjourns it to doomsday."

Such words are undoubtedly in Sir Wilfrid's mind when he hears junior members of Mr. Balfour's Cabinet jauntily discussing "extension of the fiscal basis" of the Empire. It need not be urged that the moment is peculiarly favorable to renewal of tariff negotiations. If there is a glimmer of larger political sense at Washington, the Joint High Commission will be promptly convened and directed to draw up a plan for reciprocal lowering of duties.

But the most serious obstacle to the acceptance of the Chamberlain programme by the Dominion lies in the quiet growth of the sentiment of independence—an inspiration fully in accord with loyalty to England. Except for the rather ornamental presence of a Governor-General appointed by the Crown, and the control of her foreign relations from Downing Street, Canada is inedpendent, and there are signs that she will soon assert her diplomatic independence also and negotiate directly with other nations. Already the various joint commissions appointed from Ottawa and Washington have exercised a quasi-diplomatic authority. In the negotiations which followed the failure to renew the German reciprocity treaty, Canada dealt directly with consular representatives of Germany without protest from London, and now it is a question of sending "consular agents" to the various capitals and trade centres. Such officials would be in all but name Canadian Ministers. Though the formation of a diplomatic corps accredited from Ottawa be delayed, the diplomatic independence of Canada already exists in fact if not in theory. Can any one imagine the British Government quashing a treaty that Canada plainly desired? It was done in the case of Newfoundland, with the Blaine-Bond convention; but what was done in 1895 at Canada's request would never be done in 1903 against the Dominion itself.

If this sentiment of nationality is still, except among the French, unconscious and complicated by British loyalty, it is none the less real. It furnishes the best guarantee that Canada will neither commit herself headlong to Mr. Chamberlain's impressionistic finance, nor yet refuse, when the occasion offers, to enter into mutually advantageous trade arrangements with her nearest neighbor and prospective best customer.

THE GERMAN ELECTIONS.

As was clearly foreseen, the outcome of the German general elections has been great gains for the Social Democrats. Notwithstanding the hostility of the Emperor, of the official and privileged classes, and of the Church, at least 400,000 more voters have allied themselves with the party of "subversion," as William has termed it, and thereby made themselves "enemies of the country" in his eyes. If they were Anti-Imperialists voting and talking against a policy of "criminal aggression" in other lands, they could not be more reprehensible in their ruler's eyes. We thus have the spectacle of hundreds of thousands of citizens driven by the reactionaries and the devotees of absolutism straight into the arms of those who advocate collectivism.

The Social Democrats are admittedly in possession of five more seats in the Reichstag than after the first balloting in 1898, and confidently maintain that their delegation in the Reichstag will number at least eighty. But their moral victory is far greater than appears from these figures. To have carried Saxony by 100,000 more votes than all other parties is an achievement which Liebknecht surely never dreamed to be at hand when he served his last term of imprisonment for lese-majesty only four years ago. In the previous election, the Social Democrats polled nearly 27.18 per cent. of the total vote of Germany. This year they are certain to have received about 3,000,000 votes, or considerably more than a third of all that were cast. In every case the seats won are in the cities, where the party is strongest. It is noticeable, however, that the gains were in the smaller cities. In Berlin only one new seat was captured; but Zittau, Plauen, Bielefeld, Solingen, and Darmstadt, all growing industrial towns of the second class, added to the triumph of the "Reds." Undoubtedly the Saxon dissatisfaction with the reigning family, which has been openly expressed since the flight of the Crown Princess, had a great deal to do with the victories in that kingdom. The result in Essen, Krupp's town, where the Social Democrats increased their vote from 4,400 to 22,705, must be particularly galling to the Emperor. He went there seven months ago to attend the funeral of Friedrich Krupp, and made use of the occasion and the place to denounce afresh the Social Democrats, whose active organ, the *Vorwärts*, had accused the ironmaster of nameless immoralities. The Emperor then said to a gathering of workingmen:

"I am confident that you will find the right way to demonstrate clearly and tangibly to the German working world that in the future it will be out of the question for honest, honor-loving German workmen, whose escutcheon has been stained, to hold any community or relationship with the authors of this shameful deed [*i. e.*, the Social Democrats]. He who does not cut himself off from these people will morally bring a certain measure of this guilt upon his own head."

A more direct rebuke than the vote of Essen could hardly be administered to the monarch who says to his people: "All of you shall have only one will, and that is My will; there is only one law, and that is My law."

There is every prospect that the victory of the Social Democrats will be all the more striking when the reballoting has taken place. In the second poll in 1898, 48 per cent. of the seats in the Reichstag were contested, no one candidate having secured a majority over the combined votes of all his rivals. This year the percentage of second contests is likely to be even larger. In the past, the provisions of the election laws have been extremely injurious to the Social Democrats. The second election being confined to the two candidates who received the largest number of votes, all the other parties have generally combined against the "Reds." But this year there is likely to be an influx of votes to the Social Democrats from the Radicals, who have again gone down to defeat despite an active campaign, just as the Social Democrats have helped out the Radicals where they were themselves unrepresented in the second elections.

From the point of view of Liberalism the Radical losses are unfortunate. Radicals and Social Democrats together voted against the tariff and further military and naval burdens. To the Radicals belong not only Theodore Barth and Eugene Richter, but Mommsen and other men of learning who for years followed in Virchow's lead. Many of them have found their ideals of government best expressed in the United States, and have learned many a lesson from our own political experience. Now Barth, Richter, and Mommsen must contest again for their accustomed places, and their combined forces have been cut by one-fourth. As a result we may look for even closer relations between the Radicals and the Social Democrats, as was recently foreshadowed by Dr. Barth in his remarks at Kiel on the remodelled Social Democratic party.

For German women to engage actively in a canvass is indeed a novelty. Yet the dispatches assign to them an enterprise in behalf of the Socialists which one is accustomed to find only in the Primrose League. The party's advocacy of woman suffrage is no doubt largely responsible for this phenomenon, but the cry of "bread, usury, and dear meat" has its special significance in the homes of the laborers who make up the bulk of the Social Democratic voters. The rapidly growing interest of all German women in things beyond the pale of "church, kitchen, and children," to which the Emperor would limit them, is one of the striking signs of the times. Their clubs and associations are now counted by the hundreds, their conventions are well attended, and their journals more and more vigorous. The Social Democrats are the only party which has thus far admitted women to its councils. The Radicals are favorably disposed towards them, and even the more conservative parties are likely to take a greater interest in their activities. The result of the poll as a whole will not be taken by either the Government or the Conservatives as a rebuke to the high-tariff policy of the last Reichstag. Nor will the Ministry be compelled, as matters stand now, to form new alliances for the sake of a Parliamentary majority.

ON DISPLAYING CELEBRITIES.

From the accounts of the reception of M. Rostand at the French Academy may be deduced certain advantages of academies ignored in Matthew Arnold's famous essay—namely, the opportunity afforded by such an occasion for the display of a nation's best talent. Ordinarily, there are obstacles in the way of intercourse between, say, a poet and his public. The customary round of society frets him and tends to merge him in the mass of black-coated dancers or diners; public dinners give him indigestion and require of him silence or reluctant levity. In short, in countries which do not have academies, the conditions of publicity are so distasteful and demoralizing that literary men of any sensitiveness are driven back to the seclusion of pipe and slippers.

In strong contrast with what may be called the Anglo-Saxon way is the fashion in which every Frenchman of ability is compelled to contribute something interesting to the social life of the nation. We need not dwell upon the exceptionally happy feature of M. Rostand's reception. A kind fate gave him the duty of eulogizing the poet and dramatist Bornier. Rostand's predecessor in the Academy was also his precursor in the poetical drama. Bornier's "La Fille de Roland" had brought to the disconsolate France of 1875 something of the patriotic exaltation that "Cyrano de Bergerac" inspired in the faction-torn Paris of 1897. Both authors had an immediate and a deserved success. Bornier had recalled to a Paris humiliated by the Prussians, and smirched again by the impious hand of its own mob, the memory of Charlemagne's strong reign and of Roland's supreme sacrifice. Rostand, with his creation of a hero of infinite tenderness, lion-like bravery, and undaunted humor, gave a new and patriotic impulse to a Paris beset by dreary villains and cheerless partisans. No one who did not pass that terrible winter with Mercier, and Zola and the Veiled Lady, and the wraith of the Captive of Devil's Island, can imagine what a consolation it was to know that Cyrano was playing, and that amid that coil of slander and deceit French schoolboys were organizing companies of "Cadets de Gascogne." Besides this cognate position as patriotic poets, Bornier had the attraction for Rostand of being a man not wholly unlike his own Cyrano—a great soul in a body pitifully small to contain it; a dramatist whose subjects were Mahomet, Dante, St. Paul, Charlemagne, and who remained most of his life an under-librarian; a candidate for the Academy who took a nap while the Immortals were balloting on his name, and had to be shaken out of sleep into his new honors. With such a hero M. Rostand's eulogy was sure of success; and similarly the charm of the young Academician inspired the critic Vogüé, who made the address of welcome, to an unusual warmth and eloquence.

But it might be said: "This was an exceptional case, with peculiarly auspicious conditions. You will not seriously maintain that the official oratory of France has any considerable effect either for good or ill?" It has this effect—it leaves none of the finer emotions of the nation to a random or unworthy expression. M. Rostand may never surpass his eulogy of Bornier, but, if health be granted him, he will be heard on many occasions pleading for Gallic wit and bravery against the cynicism of the Boulevards. And M. Rostand has the assurance that when his last line is written, after a decent space for preparation, some future Academician will compose an appreciation of Edmond Rostand as scrupulously just and careful, if hardly as delicate, as that which he has left in memory of the poet Bornier. Through this practice of making her literary men her spokesmen, France is saved from the plague of professional oratory and from the itinerant speaker on subjects which he does not understand. Your Academician may be a dull dog, but at least he speaks with discretion and authority. If he fail to rise to the height of the occasion—as will happen—he is at least freed from the constant temptation to be unworthy of himself.

One can hardly overestimate the value of these occasional addresses of high quality in forming and cherishing a body of cultured opinion. The influence of books is individual rather than social; such speakers as M. Rostand and the Vicomte de Vogüé not only represent an élite, but recruit its membership; and it is this compact class, with its organized agencies and its spokesmen, that makes France the nation of all others most hospitable to the things of the mind.

It would be futile for America or England to attempt prematurely to

adopt the French system. No good can come of imposing upon our public any bodies which lack none of the qualities of the French Academy except its dignity and competence. But we may at least congratulate a nation that gives its poets an intelligent hero worship; for the poets are the prophets of magnanimity. M. Rostand dwelt very touchingly upon his long walks in schoolboy days with a certain tutor. Where others taught him dead facts, this young man told him of beautiful landscapes, great loves, and of bold deeds. It was Villebois-Mareuil who, before devoting his sword and his life to the heroic burghers of the veldt, gave Edmond Rostand his earliest lessons in romance. This, said Vogüé, in welcoming Rostand to the Academy, is the function of the poet—to stir his times to remoter and nobler issues: "Heroic deeds are latent in the souls that your songs have touched. That is why such as you alone can lay claim to complete popularity, to absolute sway over our hearts. They alone have the power of awakening enthusiasm, which seems dead because it is chilled when we become absorbed in Byzantine debates and Lilliputian ambitions." It is because France recognizes the value of poetry that she displays her poets and celebrates them in a fashion astounding to a less literary people. It seems to be one of the matters that they manage better in France.

CHOOSING COLLEGE PROFESSORS.

Mr. Sidney Lee has returned to England convinced that our American way of choosing college professors is better than the English, and has manfully made his avowal of conversion in the London *Times*. Towards that variety of the merit system which prevails at the English universities, his attitude is one of courteous ridicule. No man of high professional standing likes to answer an advertisement and put himself in public competition with a score of nobodies, and no modest person wishes to draw up the list of his own qualifications; while canvassing for the endorsement of distinguished acquaintances is the most distasteful task that can be set a scholar. All this open and competitive candidacy is, Mr. Lee finds, humiliating to the professor himself, and disadvantageous to the university, inasmuch as it deters good men from presenting themselves for professorships. Unquestionably our system, under which the chair seeks the professor and the professor is forbidden all overt efforts to reach the cathedra, lends a greater dignity to the election, while the fact that all incomplete negotiations are held confidential spares the dignity of unsuccessful candidates.

With Mr. Lee, we best like our way of catching professors, but we feel that the English method has so exact a relation to the subsequent duties of a British professorship that it hardly deserves unqualified condemnation and hasty abolition. The conditions are so unlike in English and American universities that it is not unnatural that promotion to professorships should reflect in either case the national and local differences. With us the position of a college teacher is eminently a personal one. He must first work in friendly relations with the President who appoints him and is his chief; his courses of instruction cross or touch those of a dozen of his colleagues towards whom he is bound to be considerate; frequently a more intimate bond unites him with the members of a highly organized department; finally, he must come to terms with scores of students into whose heads he must pack useful knowledge for weeks in order to extract it again during the few hours of examination. Great scholarship and distinction by no means fit a man for these manifold individual duties; frequently, in fact, they incapacitate him from playing his part acceptably in the fretful trade of teaching. It was this that made a college president, not of Irish extraction, say that he wished not scholars on his faculty, but men who had been worked to death in Western colleges and had survived. Evidently no merit system is fully applicable to an employment in which personal qualifications are all-important.

If the American professor is primarily a useful person, the English professor has been until very recently chiefly ornamental, and this undoubtedly explains the British method of public candidacy. An old-school English university professor teaches none of the subjects indispensable for a degree. He pursues his subject, without disciples frequently, and lectures a few times a year to those who care to hear him. He draws his stipend less for any tangible service than for the scholarly prestige he brings to the university. Ordinarily he lives apart from the intimate life of the colleges, and is rather less than a name to the students, or even to the dons. "S——? He's the chap the girls go out to hear," said a Cambridge don when questioned as to the most eminent Chaucerian now living. In short, unless the English professor distinguishes himself by some eccentricity—goes in for road-building like Ruskin, or paints fellow-professors at a single public sitting like Professor Herkomer, he hardly makes an impression upon the daily life of the university. It is, then, not unnatural, where distinction rather than efficiency is the criterion, that the university should require the fame of a candidate to be proved in the most conspicuous fashion, and if, as Mr. Lee insists, it is an agonizing affair to draw up your own bill of praise, there must yet be a peculiar pleasure in finding the items approved by an historic university.

It must be supposed that Mr. Lee's strictures apply less to Oxford and Cambridge than to the teaching universities of Scotland and their imitators in England which are constantly growing in attendance and in general esteem. Institutions like Owens College, Manchester, and the Universities of London, Glasgow, and Edinburgh, combine the teaching with the examining and degree-giving functions. Their professors work under conditions not unlike those which prevail in Germany or America. Naturally, these learned bodies suffer at times in straining the analogy of the civil service and applying a distorted merit system to the selection of professors. Since the Universities of Oxford and Cambridge are beginning gradually to assume the teaching function, which for many generations they have left to the colleges, the matter of appointments will probably be looked into and revised in the American direction, though for years to come the historic chairs will remain foundations for voluntary research, or rewards for past achievement, rather than professorships in the American and German sense. Mr. Lee's frank commendation of the American plan is an interesting evidence of the spread in England of the idea of a teaching university. To many who at this season are trying to better their academic condition, his observations will be consolatory, for no Anglomania is likely to add to the examination papers and reports which already darken the June days of American professors the ungrateful burden of composing elaborate briefs in their own commendation.

THE PARIS SALONS.

PARIS, May, 1903.

Mr. Sargent's good fortune follows him from London to Paris, and this summer at the New Salon, as last at the Academy, his work stands out with special distinction simply because it meets with so little competition. He has sent one of the large portrait groups that made such a stir when first exhibited at Burlington House a year ago, "The Misses Hunter." I described it in the *Nation* at the time. It is the portrait of the three sisters who sit on a circular divan, the lines made by the grouped heads repeated in the flow of the voluminous drapery; a composition full of ingenuity. There is in the painting the skill, the dexterity, the sheer cleverness that distinguishes all Mr. Sargent's work. To see it a second time is to wonder again at the vigor of his large sweeping brush, at his rendering of the dull sheen of the black silk in two of the gowns, at the modelling of the little dog in the foreground. But to see it again is also to be still more conscious of its defects; the drawing is so vague and careless that two of the sisters have no legs at all, and the third, those of a giantess; the heads are all painted from the same palette and after the same pattern, which even the plea of family resemblance cannot justify; the dog, a solidly modelled little body, makes no impression whatever upon the black skirt upon which he lies extended in sound slum-

ber, but hangs in mid air as miraculously as Mahomet's coffin.

One feels, as indeed one always does with Mr. Sargent's pictures, that, submitted to a more severe test, placed in a collection of old masters near Hals or Rembrandt, Velasquez or Rubens, the portrait would seem merely the clever performance of the clever student. But in the Academy there was nothing to compete with it. Now, at the New Salon, there is nothing. Such distinguished or accomplished portrait painters as Mr. Whistler, Mr. Alexander, M. Gandara, M. Zorn send nothing this year. M. Boldini, a serious rival in Mr. Sargent's own particular line, has but a very small head, while M. Besnard, M. Aman-Jean, and M. Simon have seldom been so uninteresting, and M. Carolus-Duran, Mr. Sargent's master, continues to paint the same gorgeousness of costume, cut out against the same gorgeousness of background, with the same meretricious qualities that have made his later portraits hardly worthy of an artist of his undoubted power. The only portraits of note come from M. Anquetin, who, however, in his series of Rabelais, Descartes, De Vigny, and Balzac for the Hôtel de Ville at Tours is so colorless that one must turn to a little picture of a sudden effect of light in a Parisian street to remember what an accomplished painter he is; from Mr. Lavery, who has a graceful full-length of a lady; and from M. Blanche, who has several smaller canvases, half-lengths, of distinguished people, treated with unusual reticence and dignity, but whose one large group, "M. et Mme. Francis Vielé-Griffin et leurs quatre filles," is little more than an ambitious failure. Mr. Sargent stands really alone, and consequently he triumphs.

But I have found the Salon this season almost altogether a triumph for the American exhibitors. I do not mean the well-known artists who long since made their reputation, so much as the younger men, of whom, in the case of two or three, I at least now hear for the first time. Indeed, one is struck by the fact that most of the older exhibitors are unrepresented. Not only Mr. Whistler and Mr. Alexander, but Mr. Melchers, Mr. Humphreys Johnston, Mr. Abbey, Mr. Dannat stay away. Mr. McLure Hamilton is content to send one small portrait which he himself has often surpassed. Mr. Childe Hassam apparently thinks that, having before this shown in the Salon what he can do, there is no need for further effort, and the three or four outdoor sketches he contributes would find a more appropriate place in his own portfolios. Mr. Gay is still painting little interiors of great French castles with some feeling for their dignity and charm, though his work is dry and matter-of-fact when compared with M. Lobre's more brilliant, more freely rendered versions of similar subjects which this year, unfortunately for Mr. Gay, have a place on the opposite wall. Mr. Alexander Harrison is still painting his familiar seas, seldom varying his effects, save in one where he seems to have borrowed the palette as well as the big clouds of M. Ménard.

In the work of the younger men, however, there is not only less sign of fatigue, as is natural, but greater freshness of vision, greater truth of observation, and greater appreciation of design. For the last few years, the landscapes of Mr. Morrice, a Canadian by birth, have been among the most delightful in the New Salon. His merit is that he can see things as they are, and yet see them charmingly. To many, even of the most distinguished landscape painters to-day, this appears to be an impossibility. Take M. Lhermitte: his sunlit fields where gleaners are at work, his low river banks where women bend over their washing, compel admiration, as they always have done, from the sheer force of their truth to nature; but no one would look to them for charm of color or sentiment or arrangement. And so it is with the canvases of uncompromising realists like the Belgians, M. Claus and M. Buysse, who almost go out of their way to select violent and crude effects as if to prove their absolute fidelity to nature and their disdain of the resources of the art they practise with such technical ability. The Norwegian, M. Thaulow, is another who has conquered by the unmistakable truth of his records of the movement of water, of the brilliancy of snow and ice in clear sunlight, of the quiet and hush of the empty street in the moonlight; but, gradually, he too appears to be beginning to believe there is no being true without a straightforwardness bordering on brutality. At the other extreme are men like M. Le Sidaner, whose study of tone and evening light are based upon a convention that threatens to convert the scene before him, whether Chartres on its hill or the little garden of the suburban villa, into a mere conventional shadow; or M. Billotte, who, whatever his theme, knows it only through the eyes of Cazin, his master; or M. Duhem, whose pastorals are in danger of fading out of sight. But Mr. Morrice steers a middle course. In Venice, for example, he is as conscious, as any one who ever painted there, of the pale loveliness of palaces and campanili, lying on the lagoon, as one sees them from the Public Gardens; but he is no less sensitive to the magic of light—not the glitter of the ten-franc water-color as sold in the Piazza, but the misty, shimmering real Venetian sunlight, that weaves town and waters and sky into one rare and haunting pictorial whole, no less sensitive to the grace and dignity of the pattern made by the distant outline of the dream-like city, the stretch of well-spaced water, and the terrace with its symmetrically placed figures. Truth and design you find in the same happy combination, whether he paints a place in St. Malo or an effect of snow in his own Canada, the northern sea with its sails or the Gardens of the Tuileries; and, always, beauty of color and unity of tone are essentials to the design. Again, in the pictures of Mr. Frieseke, which I never remember to have seen before, there is feeling for design, for color, for pictorial harmony. Mr. Whistler has evidently been the master whom he has carefully and sympathetically studied. But Mr. Frieseke's rendering of the nude, of a woman in pale rose and silver draperies, and of other themes as simple, show that he is able to observe for himself with truth and delicacy both, and if he can cultivate his own originality, a notable future should be in store for him. At all events, he is a painter whose career is worth watching.

Mr. Maurer is another newcomer. He owes more to Manet than to Mr. Whistler, but he, no less than Mr. Frieseke, gives evidence of powers of observation of his own. His ballet-dancer may be Manet-like, even to the bunch of flowers she holds, recalling the "Olympe" of the Luxembourg; but in a little picture of "La Dernière Danse au Bal Bullier" he has observed for himself an amusing and pictorial arrangement of light, and carried it out ingeniously and forcibly. He, too, is a painter from whom something should be expected. These are the men who have interested me most. But I might at least say in passing that there are also good examples of Mr. Herter, Mr. Clark, Miss Nourse, and Mrs. MacMonnies among the other Americans.

At a first glance it might be thought that the younger Spaniards are even more promising. But it seems to me that I see already some indication of exhaustion. True, the vigor of Zuloaga is tremendous. In him you feel, as in Sargent, the mere physical or muscular force and endurance so much more characteristic of old masters than modern weaklings. The Misses Hunter themselves are not painted with greater dash and vivacity than the Andalusian, with her piquant eyes and heavily powdered face, and the Gypsy, with her dark skin and darker hair, as they pose and swagger on Zuloaga's canvas. And the detail of a flowered shawl or a toilet table is as marvellous as Sargent's silks and chiffons. But then it is all so clever that you see nothing save the cleverness. There is no repose, no reticence, no dignity. Artists in Paris are making of Zuloaga their hero of the moment, but, on looking dispassionately at his huge canvases, they strike me as mere technical fireworks compared to that still bigger picture, a couple of years ago, also of typical Spanish types, that led the more enthusiastic critic to welcome the young Spaniard as a new Velasquez. Garrido, too, I think, has lost something in the last twelvemonth. He has a poultry shop, quite amazing in its treatment of the rows upon rows of feathered and trussed fowls and its pile of glistening, disembowelled rabbits; but in the midst he has placed a woman as banal and trivial as if she had strayed from any foolish story-telling picture. There is a glow of color in Anglada's impressions of Spanish markets and French theatres, a dramatic suggestion of movement in Casa's painting of the charge of the mob at Barcelona in 1902. And yet I am not sure that I should have found any of these things so notable in the first days of the secession of the New Salon from the Old. For there is no question that, as far as French painters are concerned, the present moment is one of inaction or fatigue. I have referred to a few who once gave the exhibition its chief distinction. Of the others, M. Carrière must also be named among the absent. M. Raffaëlli seems bent on proving the qualities of his own solid oil colors. M. Picard, who was for an interval so promising, has degenerated into simple Salon commonplace. M. Legrand always commands attention; but the violence of his color schemes and his deliberate indifference to beauty of surface—one of his pictures, a landscape, may be said to be modelled in paint—reduce his canvases to the level of the sensational, and sensationalism is now as old-fashioned as Rosicrucianism or the Scriptural phase at one time all the mode.

If I except the decorations of Gaston La Touche, some good strong studies by Hochard, and perhaps the work of the Scandinavians Edelfelt and Hagborg, nothing has

left much of an impression on my memory save the solemn Breton subjects of M. Cottet and the grotesque of M. Veber. M. Cottet again paints his sad gray landscapes with the sad, black-robed peasants of the north posed, or posing, in statuesque immovability, oppressed as it were with the melancholy of their native land. His largest picture, "Deuil Marin," the three silent, brooding figures seated within sight of the sea, has a fine solemnity, a simple dignity, that make up in a great measure for the heaviness of his manner and the opaqueness of his color. It is not easy to take M. Veber's absurd little dwarfs frisking about a tavern, or holding out their tongues to the doctor, very seriously; their real place is rather in the comic papers. But M. Veber has at least the grace to amuse himself in his own fashion, and not according to exhibition formulas.

The sculpture is disappointing. M. Rodin does not send, while neither M. Bartholomé nor M. Meunier is seen at his best. A high standard is maintained in the prints and drawings. In his etchings certainly, Louis Legrand, though his subjects may be sensational, never sacrifices art to sensation and facility. And the men who have done so much to develop modern lithography and wood-engraving and etching and color printing—M. Lunois, M. Lepère, M. Renouard, M. Chahine, M. Florian—have not ceased to experiment, have not ceased to do distinguished work, There are some engravings by Florian after Renouard's sketches that are simply marvellous in their rendering of the very quality of the original. One American I noted among the etchers, Mr. MacLaughlin. Had I space, I should like to write at length of the drawings in different mediums by Milcendeau, Luigini—a newcomer—Jeanniot, Legrand again, and Bottini. I should like, too, to point out how deplorable is the tendency to the fantastic and the eccentric in the furniture and the decorative work.

But I must add a few words about the Old Salon. Here, too, most of the pictures or prints in which I find the smallest interest come from Americans and younger men. Even the old-fashioned *machines* appear to have lost something of their sensationalism, or, what is worse, their ability. Thus, M. Jean Paul Laurens has a huge triptych representing scenes from the life of Joan of Arc, and yet I know conscientious critics who never managed to see it, though because of its size alone one might think it could not be passed by. Then M. Henri Martin has another triptych still larger, in which he abandons myth and allegory for realism, and shows peasants at work in a valley overshadowed by high mountains; but his mowers are simply so many studies of the same model, while the restless technique, the crude mosaic of little dots of color, hurts and bewilders the eye. And yet these are the most notable among the huge canvases. The landscapes of M. Harpignies, M. Gosselin and his pupil, M. Jacques Marie, and M. Pointelin, are, as they have been for so long, among the rare exceptions to which one turns with pleasure, though it must be confessed that those painters produce the same effects, even the same designs, so constantly that it is difficult to say anything new about them. When, here and there, other pictures have arrested my attention, I have been almost certain to find them by Americans—Mr. Eaton, Mr. Bohm, Mr. R. E. Miller for instance; or a Spaniard, Sorolla y Bastida; or a Belgian, Verhaert; or a Dutch painter, Mlle. Schwartze. And so in the section of prints and drawings, the etchings of Mr. Pennell and the wood engravings of Mr. Wolf are the chief things to record. Nor is the sculpture much more stimulating. For Mr. MacMonnies I looked in vain. And though M. Frémiet's equestrian statue of Col. Howard, destined, I believe, for Baltimore, will interest Americans, it seems to me that in it the sculptor is merely repeating once more the motive of his delightful little Jeanne d'Arc, and losing in grace and spontaneity. With this new repetition, the decorative work, to which more and more space is devoted, runs to still greater lengths of fantastic eccentricity than in the New Salon. Of course in a detailed account of the Old Salon more might be found calling for notice or description, but in the general impression, which is all I pretend to give, I do not think I have exaggerated the weakness or prevailing dulness of this colossal exhibition.

N. N.

LAFAYETTE'S LETTERS.

PARIS, June 4, 1903.

The 'Inedited Correspondence of Lafayette: Letters in Prison—Letters in Exile (1793-1801)' cannot fail to attract attention. It has just been published in a fine octavo volume by M. Jules Thomas, a professor of philosophy, with a fine portrait of Lafayette as general. The correspondence is preceded by a "psychological study" by M. Thomas. I use his own expression, and I will say at once that this study adds nothing to the interest of the letters. It is a pity that M. Thomas is more of a philosopher than of a historian. His professional habits have led him to undertake a psychological analysis of the character of Lafayette, of the development of his ideas; he has looked into him as a watchmaker looks into a watch. This systematic study is all the more irritating because Lafayette was, above all, a man of action, a man of impulse. The tone of this extraordinary "psychological study" may be inferred from such lines as these:

"The life of Lafayette is a psychological case with very simple elements and of exceptionally long duration. The data, which have little variety, are from an early date actual and entire in the subject which is under study, and they are rich enough to furnish a development of seventy-seven years without renewal and without being otherwise altered than by the effect of their own evolution, which divides itself into two parts. First, there is an ascending period of seventeen years, from the first crisis of enthusiasm at the age of eighteen (August 8, 1775) to the crisis of moral depression of August 19, 1792; then, after a rather sudden ascent, a period of relative immobility of forty-two years. These two periods are clearly distinct."

I do not know how this sort of style and of systematic writing will affect the generality of readers; as for myself, I must confess that I was discouraged by it, and almost prevented from going any further. Fortunately, this pretentious manner of formulating the laws of the inner life of Lafayette detracts nothing from the interest of his letters.

The materials of Thomas's "study" have chiefly been found in the 'Memoirs, Correspondence, and Manuscripts' published by his family in six volumes (Paris: Fournier, 1837-1838), as well as in the 'Biographical Notice of General Lafayette' published by M. Charavaye. Some inedited documents were found in the papers of M. Romeuf, and have been lent by his family. M. Louis Romeuf was a devoted aide-de-camp of Lafayette, who charged him in 1798 to collect and publish the letters which he had written in prison and in exile. But Louis Romeuf was killed in 1812 at the battle of Borodino; and M. Thomas says that it is only now that Lafayette's desire is satisfied, after nearly a century. The inedited correspondence begins in March, 1793, with a letter addressed to Madame d'Hénin, an intimate friend of Lafayette. In all, ten letters are addressed to her; the others are addressed to Madame de Lafayette, to Archenholtz of Magdeburg, to Mr. Pinckney, to M. de Lally-Tollendal, to M. La Colombe, to Louis Romeuf, to Madame de Tessé, to Madame de Montaigu. A great many letters are in English.

Lafayette's early education was rather neglected. He never knew his father, who was killed at the battle of Minden (1759), when the boy was only two years old. He was thirteen years old when he lost his mother. At the age of fourteen he entered a company of the King's Musketeers; at sixteen he was lieutenant in the regiment of Noailles. He married at sixteen years and seven months; a month after, he was named captain of dragoons. It was at the table of Gen. de Broglie, at Metz, in 1775, upon hearing a conversation on the revolt of the American States, that he resolved to go to America. He left Europe on the 20th of April, 1777, being barely twenty years old. He returned to Europe for two years, and went to America a second time. This eventful period of his life is known in all its details, as well as the prominent part which he took, after the peace, in the events which were the first act of the French Revolution.

Washington, and those who surrounded him, Jefferson, Hamilton, Franklin, made on Lafayette's mind a lasting impression; Washington especially remained his god, and he dreamed of becoming in France a Washington under Louis XVI. From July, 1789, to July, 1790, Lafayette was perhaps the most popular man in France. He prepared a text for the Declaration of the Rights of Man; he presided for a moment over the Constituent Assembly; he gave the order for the demolition of the Bastille; he was appointed general of the National Guard, and gave an army to the Revolution. He was not long in seeing that he could not master the Revolutionary forces, and tried in vain to reconcile the parties and the factions, which became day after day more ardent and unruly. He was appointed commander of the army of the North, but was soon replaced by Dumouriez.

He felt that there was no longer any safety for him; and in fact on July 19, 1792, a decree of arrest was issued against him. He was at the time at Bouillon, near the frontier, which he crossed with twenty-three officers and thirty soldiers, and arrived at Rochefort, in the territory of Liège. He had no fixed plan; he himself said afterwards that his thoughts were

confused. At times he thought of going to Holland and of taking refuge with the American Consul at The Hague, or of going to England to wait there for events. He had before him the combined armies of Prussia and of Austria.

On the 19th of August, 1792, he was taken prisoner by the Austrians at Rochefort, and from that day to the 16th of September he was not allowed to write to his family or to his friends. He was sent with an escort, with the officers and soldiers who accompanied him and who had been disarmed, in the direction of Brussels. The little troop had reached Nivelle, which is not far from Brussels, when orders came to have it sent towards Germany on the Rhine border. That same day the officers and soldiers were released. Lafayette was kept a prisoner and a hostage, and three other members of the Constituent Assembly, Alexandre de Lameth, César de Latour-Maubourg, Bureaux de Puzy, were sent with him, also as hostages, to Wesel. They remained there till the 31st of December, 1792, and were afterwards transported in peasants' carts to Magdeburg, a Prussian fortress on the Elbe, where they arrived on the 4th of January, 1793; they were sent a year afterwards to Neisse, on the extreme frontier.

At Magdeburg, Lafayette was able to enter into correspondence with a friend of his, the Princess d'Hénin, who was living in London. She was the wife of the representative of the Alsatian house of Hénin. Copies of these letters were communicated to Washington, and were found by Jared Sparks among the papers which enabled him to prepare his 'Life of the President.' A translation of the first letter was published in his 'Life of Gouverneur Morris.' Now for the first time it appears in its authentic form. It bears date of March 15, 1793, and begins by telling the story of Lafayette's captivity. "All the precautions that have been taken to sever all communication between us and the rest of the world, to keep us in prison, to multiply our privations, would require a long description." He describes in minute details his prison, his daily life. He has no paper, no ink, no pen. "It is by a miracle that I possess this sheet of paper, and I write to you with my toothpick." He has but scanty news. "We have heard, however, the success of the French arms; the assassination of the King; his trial, in which every law of humanity, of justice, of the national compact, was contemned; the abominable murder of my virtuous friend, La Rochefoucauld." He has no news of his own family. On the part of the United States 10,000 florins have been deposited at Magdeburg. "This will keep me, when my own money is gone, from living merely on bread and water." In a postscript to this letter we read these significant lines: "I don't know what has become of my place in Cayenne; but I hope my wife has taken steps to insure that the colored people who cultivate it shall remain free."

The letter to Von Archenholtz of Hamburg (March 27, 1793) is remarkable as setting forth the conduct and policy of Lafayette during the Revolution; it is very creditable to his patriotism. It is in some parts quite eloquent. Archenholtz was the editor of a paper, much read in Germany at the time, the *Minerva*. It was by the efforts of Gouverneur Morris that Lafayette obtained, after some months of detention, permission to receive open letters and to answer them under the eyes of his keepers. The first of these letters was naturally addressed to Madame de Lafayette. In those addressed to his American friends, Lafayette several times compares the American and the French Revolutions. He attributes the success of the American Revolution to moral and political qualities very common in America and almost unknown in France. All the good he sees in the French Revolution is what was imported into France from America, the Declaration of Rights especially. He analyzes and criticises the Constitution of 1791; he reproaches the French Revolution for its tumultuous character.

In the published correspondence Madame de Lafayette appears a very sensible woman, very capable, conducting the affairs of the family. Her advice to her husband is always sound. On the whole, the correspondence is a valuable historical document. Lafayette shines in it as the advocate of constitutional government and of progress, and at the same time as the determined enemy of revolutionary methods and of social disorder.

Correspondence.

"PADDY PERSONS" AND "PADDY" WORDS.

To the Editor of The Nation:

Sir: Readers of Motley's 'United Netherlands' will remember (vol. i., ch. vii., p. 393, under date 1585) a quotation inserted in the text from a letter of Muster-master Thomas Digges to Walsingham of January 2, 1585 (=January 12, 1586, N. S.), in which the writer is cited as saying: "I doubt not the flower of the pressed English bands are gone, and the remnant supplied with such paddy persons as commonly, in voluntary procurements, men are glad to accept." Motley seems to have been tickled by the strange expression "paddy persons." He adopts the *ignotum pro magnifico* without inverted commas, in the next paragraph, in which we are told that "the condition of the paddy persons continued most destitute." They turn up again, as old acquaintances, in ch. viii., where "Alexander Farnese and his heroic little army" are in the same plight as "Lord Leicester and his unfortunate 'paddy persons.'" The queer adjective attracted the attention of dictionary-makers. It appears in Webster, 1864, with a quotation attributed to Digges, and one from Motley—in reality, both from Motley. It was thence compiled into Ogilvie's Imperial, 1882, and Cassell's Encyclopædic, 1886, transferred to the Century, 1890, and Funk & Wagnalls's Standard, 1895. If dictionary recognition could establish the genuineness of a word, "paddy" ought to be above suspicion. Nevertheless, our editorial staff, seeing that all this long chain of "authority" was second, third, fourth, and fifth hand, and hung upon the slender thread of Motley's quotation—manifestly itself, at least in spelling, only a nineteenth-century version of Digges's words—thought it needful to have the original letter in the State Paper Office, London, examined, with the result, authenticated by the Deputy Master of the Rolls, Sir H. C. Maxwell-Lyte, that "paddy" turns out to be merely Motley's misreading or miscopying; Digges's word being "baddy."

The passage, copied verbatim, is as follows—where observe that Motley has changed the sixteenth-century "doubt" into the nineteenth-century "doubt not":

"I doubt the flower of the pressed English bandes are gone, and the remnant supplyed with such baddy persons as commonly, in voluntary procurements, men are glad to accept."

Paddy (adj.) thus drops out of the English language, unless, as a friend suggests, it should be retained for the purpose of conveniently denominating bogus words, which, originating in some misreading, misspelling, misprint, or other mistake, are uncritically "compiled" into one dictionary, and then sequaciously taken over from dictionary to dictionary *ad infinitum*. Some hundred such *paddy* words are current in the dictionaries, and it is very difficult, indeed, for even the most careful editor to steer clear of them without verification at every step—a task uncongenial to the compiler.

As to Digges's word *baddy*, I have not met with it anywhere else. Is it a derivative of *bad*, like *goody* from *good*, or *whity* from *white*; or could it be itself an error for *badde*, the earlier spelling of *bad*? *Baudy* or *bawdy* (the first of two adjectives so spelled), in the sense 'dirty, filthy,' is in some English dialects pronounced with the same vowel as *bad*, and seems also possible. It may be added that there is said to have been a dialect word *paddy*,='worm-eaten,' used in the Isle of Thanet in the eighteenth century, and registered by Lewis, from whom it was annexed by Pegge, and thence entered in a modern Kentish and, most reprehensibly, in a Hampshire Glossary (!), as if it were a living word. Had Digges's word actually been "paddy," one might have conjectured "worm-eaten" as a picturesque description of Leicester's inefficient soldiers, like a regiment of worm-eaten harbor-posts; but "baddy" is Digges's word, and "baddy," in spite of Motley and the long queue of dictionaries, we have to face.

J. A. H. Murray.

Oxford.

FRANKLIN'S OXFORD DEGREE.

To the Editor of The Nation:

Sir: The following extract from the original records of the University of Oxford must interest your readers as being new to them:

"The cause of the Convocation held on Friday, April 30, 1762, was that the most distinguished man, Benjamin Franklin Esquire, Legate of the Province of Pennsylvania to the Court of the Most Serene King, Deputy Postmaster-General for North America and of the postal service for all New England, Fellow of the Royal Society, should (if it so please the worshipful assembly) be admitted to the degree of Doctor in Civil Law, and that William Franklin, learned in municipal law, should be admitted to the degree of Master of Arts; also, that letters from the Most Honorable Chancellor to the Senate should be read and other academical business be transacted.

"The cause of the Convocation having been announced and the name of each having been separately declared by the Lord Vice-Chancellor, it pleased the worshipful assembly that the aforesaid most distinguished man, Benjamin Franklin, Esq., should be admitted to the degree of Doctor in Civil Law, and that the most distinguished man, William Franklin, should be admitted to the degree of Master of Arts.

"The most eminent man, Benjamin Franklin, Esq., preceded by the beadle, having entered the hall of the Convocation and been taken by the right hand, was presented by Dominus William Seward, Fellow of the College of the Divine John the Baptist, after the delivery of an elegantly turned speech, to the Lord Vice-Chancellor and to the Heads of Colleges, that he might be admitted to the degree in Civil Law Honoris Causa. Whom, thus presented, the Lord Vice-Chancellor, by his own authority and that of the whole university, admitted to said degree Honoris Causa.

"The most distinguished of young men, William Franklin, Esq., having been presented in a similar manner by Thomas Nowell, M.A., Fellow of Oriel College and Public Orator, was admitted by the Lord Vice-Chancellor in a similar manner to the degree of Master in Arts."

The candidates generally were duly presented to the Vice-Chancellor and the Heads of the Colleges, with the customary honors, by Thomas Bever, M.C.L., "omnium animorum socius" or Fellow of All Souls, who seems to have been peculiarly fitted for this office, as he was often assigned to it. He was a gentleman of rare cultivation, taste, and learning; a lecturer on jurisprudence, Chancellor of Lincoln and Bangor, and devoted to music and the fine arts. Oddly enough, but doubtless not without a motive, the escort deputed to attend upon Franklin in his gown of pink and scarlet had far less claim to consideration. He was merely the Rev. William Seward, vicar of Charlbury, one of the Oxford livings, and, though a D.C.L. of 1753 and labelled "Dominus" in the archives, he appears to have been that and nothing more. The greatest honor of all in this connection was paid to William Franklin, who was attended by the Rev. Thomas Nowell, M.A., who happened to be of the same age as himself and was one of the chief dignitaries of the University. He was Secretary to the Chancellor, Treasurer and Dean of Oriel College, Principal of St. Mary's Hall, and for the last thirty years of his life Regius Professor of Modern History. He was also Public Orator from 1760 to 1776—an office of peculiar dignity and importance.

As all ceremonies of that nature are planned with a nice observance of precedent and an intention to "render to all their dues, . . . honour to whom honour," it is very plain that in this instance the Oxford dons did not propose to do any more honor to Franklin than they were obliged to, and that the extraordinary reversal of the natural and proper claims of father and son was not the result of accident, but was undoubtedly arranged beforehand with malice prepense—conduct all the more emphasized by the fact that William Franklin was really only his father's appendix, and was generally supposed to have been awarded his degree of M. A. merely from regard to him.

THE DEBASEMENT OF THE SUFFRAGE.

To the Editor of The Nation:

Sir: I presume my experience has not been very different from that of many of your readers, but the frequency and regularity with which such experiences occur set one to thinking the old familiar thoughts.

The election for judges here was coming off, and I was sitting in a popular drug-store in that part of the city of Chicago known as South Chicago, talking with the owner of the store, a real-estate man, a railroad agent, a bookkeeper, and a physician. The polling-place was three blocks away, and voting was then going on. All of us were duly registered and qualified voters. I urged the necessity of going to the polls and casting our votes for good men. Their reply was something like this:

"What is the use? We shall be swamped by a gang of Poles, Hungarians, and yawps that can't speak English, don't understand the system of government, and vote just as they are told to vote by their boss. If the election were to be determined by the intelligent portion of the community, we would be there with both feet, but we don't care to waste our time in bucking against a lot of cattle whose vote is just as good as ours."

While not defending this view of the case, it strikes me as casting a valuable sidelight on the sentiment of the average intelligent citizen regarding our present system of universal and unqualified suffrage. Unless I read the signs of the times amiss, the sentiment of the intelligent middle class in America is crystallizing into a feeling of positive hostility towards universal suffrage. In and about Chicago such sentiments are frequently voiced, not by doctrinaires and closet-philosophers, but by the common, ordinary, respectable "man on the street." Twenty years of close observation in Chicago have convinced me that some readjustment of the suffrage based on intelligence, and possibly what is known as "a stake in the country," would be welcomed by the average American citizen as a means of escape from some of our many flagrant political evils resulting from both ignorance and apatny.

So far as I can make out, there seems to be no antipathy here towards a man merely because he happened to be born outside of the United States. The Know-Nothing spirit is about dead, and, whether as the result of tolerance or indifference, religious views are not considered of much importance so long as a man is a "good fellow." But the social self, as psychologists call it, is strongly developed, and, if the hodcarriers, the coalheavers, and the lumbershovers are going to the ball, and will be able to manage things to suit themselves, their betters will simply decline to participate.

If the purpose of our Constitution makers was to enlist the coöperation of the better classes of the community, they would seem to have been a little weak in their psychology. Economists have at last learned that the base money drives out the good money from circulation; possibly some day, if God is good to us, our statesmen may learn the psychological necessity of retiring from circulation the voter of light weight and dubious intrinsic value.

E. L. C. Morse.

Chicago, June 15, 1903.

THE HARVARD CHEER.

To the Editor of The Nation:

Sir: In the Collections of the Massachusetts Historical Society there is a letter written by Samuel Sewall in 1672, the year following his graduation from Harvard College, in which he relates an anecdote, not explained by the learned editors, which may throw some light on the origin of the familiar college cheer. I quote the passage:

"Here was one, who be(i)ng call'd to give in a Testimony, answered nothing but Ra Ra Ra with great deliberation: which expressions though very pathetical, and figurative, yet to a Civil Judge provd insignificant. And indeed, it would have puzzled a very discreet and learned man to have apprehended the strength of the Axiom that was begirt and swadled with so many Vinculums." (Mass. Hist. Soc. Collections. 6th Series, vol. i., Boston, 1886.)

What did this unwilling witness mean, when, being cited to testify in court, he answered nothing but "Ra Ra Ra" to his examiners? A footnote contains this unsatisfying information: "Of the 'Axiom that was begirt and swadled with so many Vinculums,' the editors have only had notions so transient and illusory that they decline to express them in the vernacular." This caution, however admirable from the point of view of historical criticism, is inappropriate amid the enthusiasms of the commencement season. Let us employ our historical imagination and boldly reconstruct the past. We have here the oldest recorded instance of the college "yell." The witness was perhaps a Harvard graduate, or still more probably an undergraduate, who had been placed under arrest on some petty charge. Being unwilling to testify, he took refuge in repeating the (new?) college cheer, puzzling the judge and confusing the process, but no doubt delighting his college friends assembled in the court-room. There is every reason to believe that he escaped with a light sentence.

It is a striking evidence of the tenacity of custom that Harvard should still utter her cheer "with great deliberation," as compared with the headlong speed of Yale. The words have of course ceased to be "pathetical," and there are now many "civil judges" to whom they are no longer "insignificant"; but they are "figurative" still, and that they must always remain.

John Winthrop Platner.

Andover, Mass., June 20, 1903.

Notes.

The Century Company's fall list of announcements includes 'Thirty Years of Musical Life in London,' by Hermann Klein; 'Theodore Leschetizky,' by the Countess Potocka; a 'Life of John Wesley,' by Prof. C. T. Winchester; 'Little Stories,' by Weir Mitchell; and a large work on recent explorations in Northern Syria, by Howard Crosby Butler.

Prof. Paul S. Reinsch's 'Colonial Administration' will appear in the autumn with Macmillan's imprint, as will Sir Gilbert Parker's 'Quebec; the Place and the People.'

The Outlook Company will bring out 'The Forest,' by Stewart Edward White, an account of his exploration of the Giant Redwoods.

'Along Four-Footed Trails,' among Western animals, by Miss Ruth A. Cook, is in the press of James Pott & Co., with illustrations by Miss Mabel Williamson.

'Famous Assassinations,' from Philip of Macedon down, is soon to be published by A. C. McClurg & Co.

Mr. Frederic L. Paxson, who has had ac-

cess to the archives of the British Foreign Office, the Department of State, and of the Adams family, has prepared an important work on 'The Independence of the South American Republics: A Study in Recognition and Foreign Policy,' which Ferris & Leach, Philadelphia, will bring out. It will not diminish J. Q. Adams's share in originating the so-called Monroe Doctrine, which will be antedated.

The History of the Talmud from 200 B. C. to the present day will be issued next September by the New Talmud Publishing Co. of this city (1117 Simpson Street), under Dr. Rodkinson's editorship.

We have received the 'Canadian Annual Review of Public Affairs' for 1902, edited by J. Castell Hopkins and published in Toronto (William Briggs). The Dominion has not lacked for this sort of manual, *e. g.*, Mr. Morgan's 'Annual Dominion Register,' to say nothing of the Statistical Year-Book issued by the Department of Agriculture and now in its eighteenth year; nor has it apparently lacked popular desire to review the State's immediate past, whereas on the bustling side of the border from which we write there is no demand for such retrospects. The divisions of the present 'Review' are Government and Politics, Relations with the Empire, Canada and the War, Relations with Foreign Countries, The Canadian Militia, Dominion and Provincial Finances, Transportation Interests, Agriculture, etc., etc., with a care for religious and moral interests, education, labor, literature, and journalism. Three pages are devoted to the copyright question in Canada. A Canadian obituary and index of names and affairs conclude the volume, which is liberally supplied with portraits of public characters—Sir Wilfrid Laurier for frontispiece, the late Principal Grant, Mr. Tarte, Dr. George R. Parkin (Supervisor of the Rhodes Scholarships), Ministers, and soldiers of the Boer war.

A pleasant light is cast upon the relations of Ruskin and Gladstone by a volume privately printed in England, containing several letters of Ruskin's to Miss Mary Gladstone (now Mrs. Drew) and Miss Helen Gladstone, together with an introduction by the Right Hon. G. Wyndham, M.P., and an appendix by Canon Scott Holland ('Letters to M. G. and H. G.') Copies are now obtainable of Mr. John Armstrong, No. 93 Fifth Avenue, at a price fixed for the benefit of an English charity. One can piece together, from this material, a delightful picture of the first meeting of the two great men at Hawarden. Every fresh turn in the conversation showed anew how utterly irreconcilable were their opinions and tendencies, yet the net result of the visit was Ruskin's recantation of his censure of Gladstone's political motives, and Gladstone's record in his diary that he found Ruskin "in some respects an unrivalled guest." The letters themselves are of unfailing interest to every lover of Ruskin. Their authorship is unmistakable. Thus: "The second volume [of 'Praeterita'] is giving me a lot of trouble, because I have to describe things in it that people never see nowadays—and it's like writing about the moon. Also, when I begin to crow a little, it doesn't read so pretty as the humble pie." The period covered by this correspondence is 1878-1887.

Mr. Goldwin Smith's 'Founder of Christianity' (Boston: American Unitarian Association) is marked by the attractive style in which its author cannot but express his thought, whatever subject he may have in hand; but the rhetorical device by which he fancies himself and his readers listening to the discourse of Jesus is so managed that only here and there it seems to be remembered, much oftener to be forgotten. The critical basis of Mr. Smith's portrayal is a good deal more positive than that of the New Testament critics of the 'Encyclopædia Biblica,' but his conception of Jesus is purely humanitarian. While he is under no compulsion to extort from him agreement with his own body of opinion, but frankly doubts or differs where he must, yet is there something of what Emerson called "the subjective twinkle" in his summary of Jesus's teachings, and one could gather from these pages what Mr. Smith admires and what he abhors, as confidently as what the Founder of Christianity thought and did and was.

In noticing the appearance of the last volume of Dr. Cheyne's 'Encyclopædia Biblica' there is need of few words besides those which may express satisfaction at the completion of a truly great work, and congratulations to the editors at the close of their labors. Whatever we may think of Jerahmeel or of Dr. Cheyne's method of textual emendation, he has unquestionably furnished in these four volumes not only a storehouse of fact and conjecture, but an enduring stimulus to further research. Especially has Dr. Cheyne forced on the English Biblical world a facing of the latest development of New Testament criticism on the Continent. *Videant consules* must now be the word for the English Church, so long comforted with a vague idea that criticism would stop at the Old Testament. Yet it is a pertinent query how such a cry can be raised when the dignitaries of that Church are themselves in the threatening camp. Nor will casting out Dr. Cheyne do much good, though hypotheses as to his exegesis of the thirty-nine articles may be much in place. As to details, Dr. Cheyne's own articles are as numerous, learned, suggestive and bewildering as ever. Other long articles of eminent importance are Simon Peter (68 cols.) and Resurrection and Ascension Narratives (47 cols.) by Schmiedel, Son of God and Son of Man (50 cols.) by N. Schmidt, Sacrifice (50 cols.) by G. F. Moore, Text and Versions (53 cols.) by F. C. Burkitt, and Trade and Commerce (52 cols.) by G. A. Smith. Of these, Text and Versions is disappointing in details, and Trade and Commerce is of remarkable freshness and originality. Finally, it may be noticed that Biblical Theology, which was formally excluded from the plan at the first, but to which some little attention was paid in Vol. III., in this volume is very fairly treated. Dr. Cheyne explains in his preface that the numerous recent studies in apocryphal and apocalyptic literature now render that possible.

The fourth volume (Chazars-Dreyfus Case) of Messrs. Funk & Wagnalls's 'Jewish Encyclopædia' continues the excellent impression made by the third. It contains several articles of much more than Jewish interest. The account, for example, of the mediæval Turkish people and kingdom of the Chazars, with their close relationships to Judaism—the last chance which Judaism has had of becoming a dominant faith—will be full of surprises to many who think they know European mediæval history. The full statement, too, of coats of arms assumed by Jews—on much better grounds it must be confessed, because granted by recognized heraldic authorities, than the vast majority of our own American armorial bearings—is unexpectedly picturesque and suggestive of the varied haps of fortune. History, here, is put into pictures with more truth than the pomp of heraldry often can boast. But the prime article of the volume is undoubtedly contained in the twenty-eight pages given to the Dreyfus case. It is significantly unsigned, and contains a patient and lucid statement of the whole matter from the beginning. Its value fairly justifies its length and rises to the essential importance of its subject.

Mr. C. H. W. Johns's little book, 'The Oldest Code of Laws in the World' (Edinburgh; T. & T. Clark; New York: Charles Scribner's Sons), will be welcome to many as a very short presentation of the Hammurabi code, the importance of which Professor Delitzsch has brought home to every one. It contains nothing but a too literal translation, and an elaborate index which serves as a digest of the code. Some comment should certainly have been added.

A translation of Professor Delitzsch's two 'Babel und Bibel' lectures has also been made by Mr. Johns (G. P. Putnam's Sons). The translation seems fair, but the introduction, by the translator, is a singular mixture of crudity and regrettable tone.

Simply from the nature of the case, Dr. Messerschmidt's contribution on the Hittites to Mr. David Nutt's litle series, "The Ancient East," is very unsatisfactory. Everything said upon the Hittites—if we can even dare to use that name—must be said hesitantly if at all, and very little can be said even at that. Still, we have here a fair gathering up of some few approximately certain results, stated with a fitting dubiety.

The correspondents are already gathering to the Macedonian slaughter, and Mr. W. E. Curtis has got in well ahead with a reprint of his articles on the Balkan situation to the Chicago *Record-Herald* ('The Turk and his Lost Provinces'; New York: F. H. Revell Co.). The ground covered in them is Constantinople, Bosnia, Servia, Bulgaria, and Greece, and they are distinctly above the ordinary newspaper type, both in accuracy and in ability. Whether all the interesting, not to say piquant, information which was supplied by residents is just so or not, Mr. Curtis's pictures combine with their vividness a high degree of faithfulness. The Austrian administration of Bosnia, the political situation in Servia, and at least part of the inside of Miss Stone's case are well brought out.

The last publication of the Student Volunteer Movement for foreign missions is an elaborate atlas covering the Protestant field, with a volume of descriptive geography. The atlas, with its gazetteer bristling with contractions, is really admirable; it compresses in easily accessible form an enormous mass of facts. The volume of descriptive geography is much lighter reading and of somewhat more ordinary missionary type. It may be questioned whether it stands in any essential relationship to the atlas.

'The Stuarts,' by Mr. J. J. Foster (E. P. Dutton & Co.), is a work in two volumes

that derives importance from the magnificent expanse of its page and the beauty of its illustrations. Such photogravures are seldom seen either in books of biography or in the more pretentious publications which are devised to ensnare the amateur of art. Not only are these illustrations of an unusually excellent quality, but they are furnished in profusion. Mr. Foster seems to have had access to all the collections in Great Britain, from those of the King to those of the scattered individuals in almost every county who have come into possession of Stuart relics by inheritance or the chances of the auction room. What the author has selected, the publishers have lavishly set forth, as honesty required, for the work is an expensive one. We shall not attempt to give even a summary list of the treasures which are here represented. Van Dyck, Lely, and Kneller are all given their place, the first being shown at his best through portraits of Charles I., Henrietta Maria, Strafford, and the children of Charles I.; Lely receiving fair treatment, and Kneller (doubtless through force of circumstances) receiving rather less than fair treatment. Old prints, medals, miniatures, and holographs are also depicted in large numbers. The work begins with Mary Stuart and ends with Cardinal York. Mr. Foster furnishes letterpress of the quality which one expects from an accomplished antiquary. It only remains for us to state that the foregoing notice is based upon the author's edition, which is limited to 150 copies.

Mr. Henry H. Sprague's 'Women under the Law of Massachusetts' first appeared in 1884, when we noticed it in these columns. Little, Brown & Co., Boston, now publish a second edition. It is a convenient handbook of some ninety pages, not a legal treatise, but "simply an attempt to state intelligibly the rights, privileges, and disabilities of women under the law of Massachusetts, especially so far as they are different from those enjoyed by or imposed upon men." It is a curious fact that the changes made in the law in twenty years, especially after what had been already done, should have been many and great. These changes have been mainly in the direction of making the modern system more symmetrical, and the result, according to Mr. Sprague, is that it is hard to say with which sex the advantage rests—*i. e.*, whether, so far as legal position goes, it is better to be born a man or a woman. Blackstone thought that the female sex was greatly favored by the common law. What would he have thought of our system?

The George T. Bisel Co., Philadelphia, publish a 'Treatise on the Law Relating to Private Corporations in Pennsylvania,' by Frank M. Eastman. The book necessarily has a mainly local interest, though wherever no decisions of the Pennsylvania courts have been made on "essential subjects," the author has "cited decisions of the courts of other States or best writers of authority thereupon." It is not a mere compilation of statutes and decisions relating to corporations, but an attempt to state what the law is for the Pennsylvania lawyer, who will find it of considerable value. The first half of the volume deals with general principles, the remainder with particular classes of corporations, of which the number, in Pennsylvania as elsewhere, is always on the increase. So far as we have been able to examine it, the work is well and carefully done.

We must leave to technical journals the appreciation of 'An Introduction to the Study of Textile Design,' by Aldred F. Barker, head of the department of textile industries, Bradford Municipal Technical College (E. P. Dutton & Co.). It is a text-book which seeks to cover the ground the student should master during the first two years of the Textile School. That ground includes a thorough understanding of hand- and power-looms, with a special knowledge of all textile structures, science of cloth construction, the designing of interlacings, and principles of drafting. The work is beautifully printed, and the illustrations and diagrams so adequate as to convey understanding even to the untechnical mind.

The far more bibliographical than historical 'Geschichte der Arabischen Litteratur' of Professor Brockelmann is largely responsible for M. Cl. Huart's 'Littérature Arabe' (Paris: Armand Colin). The German work has practically been shorn of its details and thrown into easy running French, with here and there an intercalated bit of independence. As a consequence, while M. Huart's accurate and full book will undoubtedly be useful, it makes a very small step towards being a history of the Arabic literature. We have a crowd of names of authors and their works classified in a mechanical fashion, affording little insight into the great movements of their times. Perhaps we are not yet at the point where it will be possible to grasp firmly and trace clearly the threads of development in the literatures of the Muslims. The problems are undoubtedly great and obscure. M. Huart's bibliography is singularly inadequate, but he has given an excellent index.

A trifle late for this year's planning and planting comes a useful and well-illustrated horticultural treatise, 'The Flower Garden: A Handbook of Practical Garden Lore,' by Ida D. Bennet (McClure, Phillips & Co.). The author is perfectly right in calling this volume practical. Even the pretty cloth cover of the binding (on which, by the way, the name is spelled Bennett) seems fitted for the greenhouse and for use in the open-air garden. The indexes and plans are remarkably practical, and the text is full of practical information without being dull. A few of the illustrations are among the most beautiful engravings of flowers which have yet come under our observation.

The journal *Garden and Forest* afforded to Professor Sargent a dignified and attractive medium for the publication of notes respecting the more interesting plants in the Arnold Arboretum. The large page of that journal was unexceptionable in its typography, and the engravings were well executed. Among the keen regrets that were felt when *Garden and Forest* was suspended, was that which came from the knowledge that the Arboretum notes were to cease. Now, however, in a more sumptuous style, with a fairer page, and with more elaborate engravings, the notes are resumed. 'Trees and Shrubs: Illustrations of new and little known ligneous plants, prepared chiefly from material at the Arnold Arboretum' (Boston: Houghton, Mifflin & Co.), is to be published at irregular intervals. Each volume will comprise one hundred plates; the four separate parts of each volume, with explanatory text, will cover about two years in publication. Mr. Faxon gives to these plates the spirit and truth which have characterized all of his work, and therefore one must feel that the loss of *Garden and Forest* is in part made up by this new publication.

In *Flora and Sylva* we have a new claimant for the favor which always stands waiting in England for any worthy treatise on gardens and gardening. This is a London review, published monthly, in what has been called the quasi-quarto form—that is to say, it is hardly a quarto, and it is rather too large for octavo, but just large enough for effective plates. Although the first number has an article or two about American plants, the journal is obviously designed for the English public which always purchases Mr. Robinson's works. The price ($8 for this country) is certainly reasonable for the year's subscription.

Professors Dall' Osso and Pais, who have been engaged in the archæological investigations in San Marzano and Poggiomarino on the eastern slope of Mt. Vesuvius, report some exceptionally interesting finds. Among these are the remains of an extensive villa dating from the period of Augustus. This building was found several metres below the present surface, and had been completely covered by fields under cultivation. The excavated portions of the villa show an absolute absence of ashes or lava, and it is clear that they were not destroyed by the eruption. This is new evidence proving the correctness of the statement of Pliny, that during the eruption of 79 a strong south wind blew all the ashes to the north side of the volcano, and that the eastern slope was left perfectly intact. But the special significance of the new find consists in this, that the foundation walls of the villa are separated by a stratum of 1½ metres from a stratum of ashes, beneath which prehistoric tombs were discovered. The ash stratum, then, was the result of an eruption that antedated by hundreds of years the famous destruction in the first century; in the valley of the Sarna are the remains of several villages destroyed by Vesuvius in prehistoric times. Professor Dall' Osso has undertaken extensive diggings to uncover these.

The Turkish diplomat, Feridun Bey, has bequeathed to the Hungarian Academy of Sciences the sum of half a million francs. A communication from Vámbéry in the *Pesther Lloyd* states that this sum is to be used chiefly for Turkish and Mohammedan students pursuing their studies in Hungary, in the technical branches, in agriculture, in music, and in painting. A further stipend of 3,200 francs is to be given for special studies on the linguistic and ethnological connection between the Turks and the Hungarians.

—The increasing interest in the Loyalists of the Revolution is noticeable in recent historical investigation. 'The Confiscation of John Chandler's Estate,' by Andrew McFarland Davis (Houghton, Mifflin & Co.), is a case in point. The book is an elaboration of a paper read by Mr. Davis before the American Antiquarian Society in October, 1900. Rather more than half of it consists of the documents bearing on the subject. There are four distinct collections of these, and they have been grouped in four appendices. The first is made up of certified

copies of the papers on file in the Probate Court of Worcester County; the second is a transcript of the records of the trial, under the Confiscation Act of 1780, in the Court of Common Pleas; the third embraces copies of papers in the Massachusetts archives; the fourth contains the transcripts of papers in the English Public Record Office, bearing on Chandler's case, made by B. F. Stevens and presented, in 1901, to the American Antiquarian Society. The first and the last group constitute by far the largest and most important of the documents. The author begins with an excellent account of the Chandler family and then gives a careful and exhaustive analysis of the documents. Whatever the necessity for assailing the Loyalists as a class, the history of the Chandler family illustrates one of the essential resulting evils of it, namely, that it was too often an attack upon what was best and soundest and most worth preserving in the colonial world —what might have been of inestimable value to the new republic could it have been preserved. Here was a Worcester family representing the best the province could boast in wealth, ability, character, and general culture, which was broken up and dispersed, and its power as a political, intellectual, and social force largely if not quite destroyed. This, certainly, whatever the necessity, was deplorable. There is an excellent portrait of Chandler, the original of which is the property of the American Antiquarian Society. The date usually assigned to this portrait, 1764, Mr. Davis gives reasons for supposing to be incorrect (p. 21). He has performed excellently a service for which all students of Revolutionary history must be grateful.

—The 'Letters and Diary of John Rowe, Boston Merchant,' edited by Anne Rowe Cunningham, with extracts from a paper written for the Massachusetts Historical Society by Edward Lillie Pierce (Boston: W. B. Clarke Co.), appears in a form both serviceable and attractive. The work of the editor has apparently been confined to furnishing an exact copy of the manuscript, together with nine very excellent illustrations, six of which are reproductions of portraits of John Rowe and members or intimates of his family. The introduction, of sixty pages, consists of extracts of Mr. Pierce's paper, and is a painstaking, serviceable, and interesting summary of what the Diary may be made to yield. From it one learns, almost as truly as from the Diary itself, and with much less effort, what the Boston of the latter eighteenth century was like, viewed through the very practical eyes of a prosperous merchant. Rowe was, however, more than merely that; he was active in local politics, and aspired to the Assembly, being, however, defeated several times. In the conflict with England he was a moderate, opposing the action of the mother country, yet never favoring resort to hostilities. In spite of this fact, he avoided the odium of loyalism, and, before the peace was signed, was returned to the General Court. Rowe was, too, a leader in social activities, keeping open house, and himself the welcome guest of most of the notable families in the province, sustaining to the end cordial relations with Adams and Otis. So great was the variety of Rowe's interests and activities, indeed, that one gets glimpses of all phases of contemporary life. Dancing assemblies, political clubs, coffee-house meetings, Harvard festivities, commercial panics, fires, duelling, the policing of Boston, and many other matters are touched upon more or less frequently, but always briefly, sanely, in matter-of-fact fashion. There is here no speculation, no philosophy, no intellectual insight, no style even, but just brief jottings by a busy man. For variety of fact rather than for ideas will this book prove useful to the student of history; it is, nevertheless, a welcome addition to our knowledge of the Revolutionary era. The letters cover the period 1759-1762, the diary 1764-1779. A good index has been prepared.

—The American Book Company has recently published, under the editorship of Mr. O. G. Bunnell, M.S., of the Flexner School, Louisville, Ky., an edition of the anti-clerical play "Electra," by Pérez Galdós. The edition is thoroughly vicious, and cannot be too strongly condemned. The cutting has been so skilfully done that the main thesis, and everything leading to it, is omitted. The point Galdós makes is, that religious fanaticism, as fostered by the religious orders even in their lay members, will lead a man to any extreme for the sake of gaining his end. In the play in question, Pantoja, a devotee, very much attached to a given religious order, had been in his earlier days anything but exemplary in his living. His relations with Eleuteria, mother of Electra, had been of such a nature as to give him ground for suspecting Electra to be his own daughter. He becomes possessed of the idea that, if he can persuade Electra to sacrifice her pure young life and enter a convent, he may thereby atone for his own immorality and gain salvation. Consequently he bends all his energies to the accomplishment of that purpose. But Electra falls in love with Máximo, and Pantoja's arguments fail to convince her that she should enter the convent. Pantoja then tells her that she cannot marry Máximo because they are both children of the same mother. The statement is false. It unbalances the mind of the girl whom he considers to be his daughter, and blackens still more the reputation of the woman he pretends to love; but it accomplishes his purpose, for the crazed Electra at last consents to take the veil. Now the dialogue with Doña Evarista, in which Panaoja confesses his past misdeeds and his suspicions that Electra is his own daughter, is so edited by Mr. Bunnell as to eliminate the confession. The same may be said of the dialogue with Electra, when he tells her his abominable lie. But in the ninth scene of the fifth act the shade of Electra's mother appears to her and says: "I am your mother, and I have come to calm the anxieties of your loving heart. My voice will give you back your peace of conscience. *No tie of blood unites you to the man who chose you to be his wife. What you heard was a fiction dictated by love for the purpose of bringing you into our company and into the calm of this holy house.*" Mr. Bunnell has forgotten to erase the sentences italicised. We must add that resort to the original will show that his cuts were not made in the way of ordinary expurgation; the omitted passages contain nothing that could not with perfect propriety be read in any mixed class of students old enough to read the play intelligently.

—How far back in historic times can it be proved that lions existed in Greece? inquires Dr. A. B. Meyer, Director of the Zoölogical Museum at Dresden. Lions were known in neighboring countries. They occurred in Palestine in the time of the Crusades, and in Syria they have been known from the oldest times to the present. In 1400 B. C., Amenophis III. of Egypt conducted great lion hunts in northern Syria, although in Egypt the lion was rare. Ancient writers also speak of lion hunts in Arabia. The beast is common in Mesopotamia to-day, and is found in the Zagros Mountains in Persia, and in northwest India. Over the greater part of Europe are found remains of the fossil lion. This is the diluvial lion (*Felis spelæa*), identical, according to most authorities, with the modern lion. So the lion may once have lived in Greece, and it is asserted that fossil bones have been found there, although no recent lion bones have been found; he may have gradually retreated to the East before the advance of civilization. To say, however, that the representation of the lion on a dagger blade from Mycenæ, or on the gate of Mycenæ, was taken from a real native lion, would be to assert too strongly. Like modern artists, the ancients may have had the lion of captivity before them. Homer describes the lion true to life in the Iliad (xi., 544 ff.); but this description may have been written in Asia Minor. Herodotus (484-430 B. C.) declares that many lions were found between the River Achelous in Acarnania and the Nestus, which flows through Abdera, and he says this concerning Xerxes's march through Macedonia (480 B. C.), when the lions killed some pack camels. Aristotle (384-322 B. C.) assigns the same district to the lion, but seems to have taken the description from Herodotus. However, Aristotle was a native of Stagira, and had lived in Macedonia, and so may have had opportunity to verify his assertion. Xenophon, also (428-355 B. C.), is quoted for the existence of the lion in historic times in south Thrace. This is as far back as historic testimony goes, and does not cover the Peloponnesus. The progress of diggings may strengthen the argument from analogy, and may help settle the question whether in Greece, as elsewhere in Europe, the cave lion has existed at the same time with the cave man. The general subject is discussed in an interesting way by Sir G. C. Lewis in *Notes and Queries* (2d series, v. 8-9, 1859-60).

—The ninth consecutive play in the Shaksperean series of "Senior Dramatics" at Smith College last week was "Love's Labor's Lost." The experiment was interesting, not only because this piece is rather well fitted for performance by women alone, but also because it is so seldom staged as to make precedent and tradition scanty. However arrived at, the conception as here embodied was laudable, while the spectacular effects were, as usual, in the main refined and beautiful. On the other hand, the diction, falling much below Shakespere's best level, and abounding in quip, pun, and repartee, was peculiarly exacting, and called for a very delicately shaded delivery and, above all, for the utmost distinctness. This last can hardly be said to have been met, whether from defects of voice or of training. But it was once more observable how adequately the

humorous rôles are capable of being interpreted by the Smith College graduates. Some of those in "Love's Labor's Lost" were memorably presented, insuring a genuine amusement and applause. In fine, the impression produced was more mixed than has been customary. Perhaps the quality of the play itself had something to do with this; and if so, it is once more worth while asking if the limit of practicable choice in Shakspere has not been reached or overpassed. We are convinced at least of the expediency of such an assumption, and that it is time to begin to repeat what has been successfully grappled with heretofore.

LEONARDO AND THE STAIRCASE AT BLOIS.

Spirals in Nature and Art. By Theodore Andrea Cook, M.A., F.S.A. E. P. Dutton & Co., 1903.

There is a good deal of information about "spirals in nature and art" in Mr. Cook's volume, and many interesting illustrations and much ingenious theorizing, the greater part of all this bearing but indirectly upon the main object of the book as divulged in the long sub-title. That sub-title is: "A study of spiral formations based on the manuscripts of Leonardo da Vinci, with special reference to the architecture of the open staircase at Blois, in Touraine, now for the first time shown to be from his designs." His generalizations we may therefore neglect as beyond the competence of the student of art, and as immaterial to his purpose of proving the authorship of the celebrated staircase, and we may devote ourselves to the consideration of the arguments advanced by him in support of his ascription of it to Leonardo. It is extremely difficult to explain these arguments without recourse to diagrams or illustrations, but we shall do our best to state them fairly and then to examine their cogency.

First, as to possibility, three things seem to be certain. Although no architectural work of his is known to exist, it is known that Leonardo had occupied himself with architecture and considered himself, and was considered by others, a competent architect, his official title in France being "First Painter, Engineer, and Architect to the King." He was at Amboise, not far away, at about the time when this staircase may have been planned, and when the wing of the château containing it was building; and we have no knowledge of any other work on which he was occupied save a few sketches of projects never carried out.

As to probability, the argument is more subtle and may be arranged something like this: The staircase at Blois is a beautiful work of art, and Leonardo is the greatest artist of whom we can certainly say that he may have been connected with it; it is a spiral, and Leonardo is known to have devoted much study to spirals of all sorts; it is a *reversed* spiral, like a left-handed screw, and Leonardo was a left-handed man who habitually drew spirals and screws in that manner; finally, it shows such close resemblances, in both internal and external structure, to a particular shell (*Voluta vespertilio*), common in Italy, as to convince Mr. Cook that its design was founded upon that shell; and Leonardo was a naturalist and an Italian. Just here there is a slight confusion in Mr. Cook's argument, which is not, however, of much importance. *Voluta vespertilio* is generally dextral, but occasionally sinistral. On page 89 the author argues that "an Italian collector would be more likely to have the sinistral form of a common shell than its ordinary growth," while on page 177 he says "it is more probable that he [Leonardo] did not have before his eyes" the rarer form, and that his reversal of the curves before him is "a triumphant vindication of his skill."

Conceding that, if the architect of the staircase at Blois worked from a shell at all, it is unimportant whether he copied a sinistral shell or reversed a dextral one, let us examine the reasons for belief in the probability that that architect was Leonardo da Vinci. Mr. Cook is so fair in his statement of the case that almost all the facts we shall need to consider are to be found in his volume. There have been many great artists, known and unknown, besides Leonardo, and there were many spiral staircases built before that at Blois, so that the first two points need not detain us. The third is worthy of more attention. The sinistral spiral has never been as rare in art as Mr. Cook seems to imagine, though, no doubt, it has been less common than the dextral. In discussing spiral columns, he does not mention that, in the Duomo at Florence and in Or San Michele, as in many other buildings, the two forms occur with almost precisely equal frequency, being used in pairs, the left-handed spiral balancing the right-handed one; but in the more immediately important matter of sinistral stairways he gives instances enough of such construction to minimize the force of any argument from its occurrence in a given case. For instance, on page 139, he states that, in the old part of Blarney Castle, "every staircase without exception is sinistral in form," and that "there is a spiral staircase in the stronghold of the Black Douglas, Tantallon Castle, near North Berwick, and this also is sinistral," while on page 144 he figures, after Viollet-le-Duc, another left-handed staircase from "the now vanished Collège de Montaigu in Paris." He even gives a "military reason" for this construction, saying that "Cormack M'Carthy, the Strong, fully appreciated the advantages involved in having his own right hand free to attack an ascending foe, who would only be able to use his left hand in defence." In discussing the Blois staircase, this reason becomes somewhat transformed, as we are told that "this arrangement produces an effect of hospitality in the curve, for a host could walk down it with welcoming right hand outstretched to the ascending guest, who was in his turn helped in his ascent by keeping his own right hand on the side rail." These and other reasons for the superiority of the sinistral staircase are indeed so good that it seems strange that it was not oftener constructed, and altogether unnecessary to invoke a left-handed architect to account for one example of it.

Mr. Cook's especial point, however, is the resemblance of the staircase at Blois to *Voluta vespertilio*. He has already shown that the general resemblance of a spiral staircase to a shell, sufficiently obvious at any rate, has long been recognized, and that a staircase at Fiesole is called the "Scala della Conchiglia," and another, in Venice, the "Scala del Bovolo." Also, that a staircase in the old part of the Château of Blois, built "many years before Leonardo was in France," is at least as like *Telescopium telescopium* as the later one is like *Voluta vespertilio*. Yet he does not "for a moment suggest that there was any conscious comparison in the mind of the fifteenth-century architect," because the characteristics of this staircase are "susceptible of a simple architectural explanation." The resemblances which Mr. Cook points out between *Voluta* and the Blois staircase are mainly two. *Voluta* has four spiral plaits upon the columella, or central column of the shell, and there are four well-marked spiral lines upon the newell of the staircase; *Voluta* has marked perpendicular ridges on its exterior, which give it a buttressed effect somewhat suggestive of the exterior construction of the staircase. Of the four spirals on the newell, three are structural, and two already existed in the old staircase at Blois just referred to. These two are the cornice and the hand-rail, and are accounted for by "a simple architectural explanation"; to them the builder of the newer staircase added a base-moulding and a moulding a little above the hand-rail. The base-moulding surely needs no explanation; is a conscious imitation of a shell necessary to explain the other? When we note that the mouldings of the staircase are unequally spaced, while the plaits of the shell are spaced equally, and that the added moulding above the hand-rail is interrupted by perpendicular colonnettes, while the plaits of the shell are all continuous, Mr. Cook's explanation becomes both unnecessary and inadequate, and we are forced to the conclusion that the internal structure of the staircase at Blois is a beautiful but perfectly natural evolution from that of older examples. Its external structure is so natural to an architect brought up in Gothic principles of building that any resemblance to a shell must seem accidental and fanciful. Mr. Cook says (p. 166) "that any ordinary architect would have made the lines of his external balustrades correspond with the main external lines of the floors"; but his figures 23 and 25 show that there were plenty of precedents for the contrary course. Indeed, the precedents are so many that it may almost be said that the architects of spiral stairways *habitually* followed the curve of the stairs with their external balustrades when there were any such balustrades. All the resemblances between the staircase at Blois and the shell *Voluta vespertilio* seem to be exactly what Mr. Cook asks if they can be—"one more example . . . of the fortuitous correspondence between perfect workmanship and the lines of Nature."

While the positive reasons for believing that Leonardo da Vinci may have designed the staircase at Blois seem thus to reduce themselves to next to nothing, there is a reason for believing him not to have been the designer which Mr. Cook does not seem to have perceived. Leonardo was an Italian of the high Renaissance, a possible collaborator of Bramante (see p. 151), and a deeply learned man. Is it possible that such a man should have designed in the semi-Gothic style of French architecture of the time of Francis I.? To us it seems at least highly improbable. Mr. Cook

gives us none of those architectural sketches by Leonardo "collected by Baron Henry de Geymüller." Are any of them of other than classic forms?

MORE BOOKS ON MUSICAL TOPICS.

[*The Oxford History of Music.*] Vol. III., *The Music of the Seventeenth Century.* By C. Hubert H. Parry. Vol. IV., *The Age of Bach and Handel.* By J. A. Fuller Maitland. Oxford: Clarendon Press; New York: Henry Frowde.

Haydn. By J. Cuthbert Hadden. E. P. Dutton & Co.

Musical Education. By Albert Lavignac. D. Appleton & Co.

The Story of Oratorio. By Annie W. Patterson. Charles Scribner's Sons.

Two more volumes have been added to the six which will constitute the Oxford History of Music. Volume III., by Sir Hubert Parry, follows the early monodic movement from its origin in Josquin to its culmination in Purcell, while Volume IV., by Mr. Fuller Maitland, is concerned chiefly with Bach and Handel. Sir Hubert begins his task with the declaration that "the seventeenth century is, musically, almost a blank, even to those who take more than the average interest in the art," and that to the casual observer most of its products seem little better than archæological curiosities. All the more credit belongs to the author for having succeeded in making even this barren period interesting to the seeker for information. The book is divided into ten chapters headed Antecedents, Initiatives, Links between the Old Art and the New, Diffusion of New Principles, Signs of Change in England, The Influence of French Taste, English Music after the Commonwealth, Foundations of Modern Instrumental Music, Tendencies of Italian Art, The Beginning of German Music.

Before the seventeenth century "music was almost as much restricted to the functions of religion as painting and sculpture were to subjects connected with religious history or the hagiology of the church." The new century's task was to throw off these ecclesiastic limitations in matters musical and to develop the worldly side of the art, which had indeed existed in a crude form among the people, but had had little artistic recognition. The rhythmic quality, in particular, had been neglected, nay, deliberately suppressed, owing to its association with physical activity in general and dancing in particular. Besides furthering the development of rhythm, the seventeenth century had to cultivate a taste for harmony (chords) as such, and to help to create an idiomatic language for various instruments, which up to that time had stupidly followed the style of polyphonic vocal music. In the discussion of these several points our author proves himself once more a man of letters as well as a scholar, and his readers will also be grateful for the very numerous illustrations in musical type. Much space is deservedly given to Monteverde, the Italian Wagner. England, too, plays a prominent rôle at this time, but, after dealing with a series of composers, greatest among whom was Purcell, Sir Hubert has to acknowledge the tragic fact that the essentially English attitude towards art which Purcell represented in his highest achievements for church, concert-room, or theatre, led to no ulterior development. Our author's remarks on Puritanism are interesting. Some historians have maintained that the Puritans practically killed English music, while others strenuously have denied this. Sir Hubert makes a distinction of importance. While admitting that, in consequence of Puritanism, the occupation of composers of church music was gone, he notes that the Puritan policy acted as the greatest incentive to the cultivation of familiar and domestic forms of art of a genuinely secular kind; so that in truth, as he might have added, the influence of Puritanism accidentally coincided with the general tendency of the seventeenth century—the secularization of music.

Mr. Maitland's volume on the age of Bach and Handel covers familiar ground which has been explored so thoroughly by other historians, particularly Germans, that little was left for him to say. Though those two giants are in the foreground, biographic details are eschewed, in accordance with the general plan of this series of volumes. Special chapters are devoted to different kinds of music: the choral, the cantata, the passion, Latin church music, the oratorio. Then there is a very good chapter on the development of the orchestra, followed by others on the growth of form, the rise of virtuosity, the state of music in Germany, Italy, France, and England. In the period under consideration great changes took place in all departments of music; the most important of them being that the composers learned to conceive their ideas on a harmonic basis, and gradually gave up the contrapuntal interweaving of parts. Forms were made more organic, and the powers of emotional expression were developed. The new spirit is best exemplified in Bach. Mr. Maitland's comparison of Bach and Handel will probably incense many of his countrymen, but it is strictly true:

> "The genius of the two men worked in exactly opposite directions; and if in studying Handel we seem to have our eyes turned always towards the past, in Bach we are continually brought face to face with idioms and turns of expression which are so much of the essence of modern music that the student is tempted to imagine that the art has made no progress since Bach, . . . whose compositions are sometimes felt to be less definitely belonging to a bygone day than many things by Mozart or Haydn."

Considering the importance of Haydn in the history of music, the literature relating to him is small. Mr. Hadden's new volume has only 231 pages, yet he justly claims that it is the fullest life of Haydn that has hitherto appeared in English. It is necessarily based largely on the monograph commenced by Pohl and completed by Mandyczewski. The chief reason of the scant literature relating to Haydn is, of course, that, with the exception of Bach, he had a more uneventful career than any other composer of the first rank. Another reason is the fact that Haydn was not highly educated, and took little interest in anything besides music; nor was he a good letter-writer. Yet he was an interesting character, and the chapter on Haydn the Man is particularly readable. His gratitude was quite exceptional, as is instanced by this sentence from his last will: "To Fräulein Anna Buchholz, 100 florins, inasmuch as in my youth her grandfather lent me 150 florins when I greatly needed them, which, however, I repaid fifty years ago." He had a hard time as a young man, some of his duties being the blacking of his teacher's boots, trimming his wig, brushing his coat, and running his errands, as well as playing his accompaniments. But he always preserved his humor, in his music as well as in his actions, even when, as in the case of his "Farewell" and "Surprise" symphonies (pp. 73, 89), his jokes were misinterpreted. A chapter on Haydn the Composer completes Mr. Hadden's book; the appendix includes, among other things, a selection of Haydn's letters.

"How English!" every reader of Dr. Annie W. Patterson's book on the Oratorio must exclaim. The oratorio is peculiarly an English diversion, and it is from the English point of view that it is here considered. It is English to say that, "of all musical forms, Oratorio is unquestionably the noblest and most ennobling." So far as the text is concerned, this will be admitted by all religious persons; but, after all, the oratorio has a musical point of view too, and from that it is an antiquated absurdity. We still admire certain works of Bach, Handel, Haydn, not because they are oratorios, but in spite of it. Modern æsthetic doubts concerning the Oratorio Dr. Patterson apparently has not encountered; at any rate, she has nothing to say of what are by far the most interesting aspects of the modern Oratorio—the reforms and changes attempted by Liszt and Rubinstein. She dwells preferably among the older masters, up to Mendelssohn and Schumann; Gounod, too, is not ignored, and of course the English writers in this field are duly considered, as well as the characteristic English festivals.

"Shall I give my child a musical education? When shall I begin? How many hours a day? What instrument?" These questions present themselves to thousands of parents every day. M. Lavignac answers them, together with a hundred others, in his new work on musical education, Englished by Esther Singleton. It is a remarkably comprehensive treatise, the result of the ripe experience of a professor at the Paris Conservatoire. The first of the six parts treats of the indications of musical talent, and the proper way of teaching music to young children; in the second, the author considers the study of the piano and organ, the various orchestral instruments, and the guitar and mandolin; the third is devoted to singing, the fourth to the various studies necessary for composers; the means of rectifying a faulty education are discussed in the fifth, while the last compares the advantages and disadvantages of private instruction with those of conservatories. The final section also includes a list and brief characterization of the leading conservatories of Europe and America.

There are a few points on which we may differ with the author, as when he says that in all the classic music before Beethoven the pedal should not be used; or when he would exclude romantic music from a young player's repertory until he is fifteen or sixteen years old. But, in the main, Professor Lavignac's points of view and directions are worthy of all confidence. His discussion of the important question of memorizing music (pp. 93-100) is by far the

best we have ever seen. Most players will be surprised to find that, for musical purposes, he considers the memory of the eyes far more important than that of the ears or of the fingers. Concerning the results of his method, he says: "I have very often seen modest amateurs without the slightest effort register and retain in their memories and fingers repertories of from 150 to 200 pieces. . . . I have seen people play, without the slightest hesitation, . . . concertos which they had learned ten or twenty years previously, had never since seen, and believed they had forgotten."

In the vocal chapters it is refreshing to find that Professor Lavignac does not follow the silly fashion of newspaper scribblers of making German singers responsible for everything that is bad, and crediting Italian singers with all that is good. He is severest on the French singers, because of their addiction to the tremolo and their indisposition to be musicians as well as singers; which the Germans do not share. He makes clear (p. 204) the much higher aim of modern dramatic song than that of the old Italian *bel canto;* the modern art demanding less virtuosity but more emotional expression. "We strive to charm and to interest more than to astonish. With them it was the contrary." "In this new study of a higher order, the superiority of the Italian school totally disappears." In a word, there is much food for thought in this book, which, moreover, is thoroughly entertaining, the author having seasoned his pages with a considerable number of amusing anecdotes.

London in the Eighteenth Century. By Sir Walter Besant. London: A. & C. Black; New York: The Macmillan Co.

It did not need the Autobiography of Sir Walter Besant to make it known that he was an enthusiastic and discerning student of London. Not only did he reveal his devotion towards the end of his life by such monographs as that on Westminster, but his novels all the way along gave many glimpses of it. More than a quarter of a century ago 'The Chaplain of the Fleet,' written in collaboration with James Rice, dealt with the social life of London during the very period covered by this book. The studies Mr. Besant had pursued up to that time were supplemented by persistent inquiries and observations continued until his death. The volume now issued does not pretend to give a complete record of events, and is not chronologically arranged. It should be regarded, as Lady Besant says in her introductory note, "as a social picture of London in the eighteenth century rather than as a detailed history." The eighteenth century is here considered as lasting to the Victorian era, for the great break in national customs and ideas did not come until after the passing of the Reform Bill of 1832, and the introduction of steamers and railways. The first seventy pages out of a total of 667 are occupied by a section entitled "Historical Notes." Here we have an account of twenty episodes of the century relating particularly to London, and ranging from the South Sea Bubble to the earthquakes of 1750. The remaining sections, each of which is divided into several chapters, deal with "The City and the Streets," "Church and Chapel," "Government and Trade of the City," "Manners and Customs," "Society and Amusements," and "Crime, Police, Justice, Debtors' Prisons." There are six appendices, more or less statistical, a Chronicle of the Eighteenth Century, and an excellent index. The book is plentifully illustrated, Hogarth being particularly drawn upon.

There are no footnotes, but many authorities are mentioned in the text and in a paragraph of the preface. Sir Walter Besant acknowledges his special obligations, however, to "the forgotten, the thrice and four-times tedious novel of the eighteenth century," which is not known to lecturers on the period nor to professors of literature. Fielding and Smollett give little help in details, but the dead novels and lost satires of the "twopenny box" are rich in information. An illustration will exhibit the use made of some of this out-of-the-way material. Sir Walter is showing that the usual view of the indifference of the eighteenth century to religion is exaggerated. He finds a series of papers called the *Athenian Oracle* and the *British Oracle.* These publications, read largely in middle-class households, consist of questions supposed to be put by the reader and answers given by the *Oracle.* Questions concerning biblical and theological topics are found by the side of inquiries about the origin of the Horn Fair and the cause of thunder. A curious difficulty is noted in the use of maps and drawings. Most of those published during the century presented only the modern improvements, neglecting, what would now be prized so highly, the picturesque streets still remaining of the older London; thus, Strype and Maitland give the new squares but not the ancient courts. In a few cases Sir Walter has profited by intercourse with living authorities on earlier customs—for instance, a man who travelled from Liverpool to London by stage-coach in 1830, taking thirty-six hours for the journey, and an aged Jew who had taken part in the combats for which Mendoza, the prize-fighter, trained his friends.

The result of the author's diligence is a book which is not only full of interest to the general reader, but is of real value to the historical student. There is much more here than the mere collection and arrangement of facts gathered from all quarters. In his lifetime Sir Walter was not thought of as, properly speaking, an historian, but this book shows that he would have had good claim to that title. More than once he gives reason for a revision of the commonly accepted opinion. For example, he denies that the night-watch was composed of old and incompetent persons. They were stout and sturdy fellows; their fault was not their age, but their eagerness to take bribes. One's belief in tradition suffers an even greater shock when Sir Walter declares that the existence of the Mohocks cannot be proved. The story of their atrocities was mainly due to imagination and terror; "no one, in spite of large rewards offered, was ever produced who could show a nose flattened or slit, or the bare place where the ears once had been." Reference has already been made to the author's protest against the idea of a general decay of religion in the eighteenth century. He reminds us that our knowledge of the time is usually derived from accounts of the life of the fashionable and criminal classes; the quiet, uneventful ways of the middle class being ignored by the playwright and the satirist. This omission is repaired by Sir Walter Besant, who quotes many evidences of a vigorous religious interest on the part of the average London citizen, whatever may have been true of the rest of the population.

The admirers of Sir Walter's fiction will be glad to find in this volume many illustrations of that kindly common-sense moralizing which was one of his characteristics. Now and then he drops for a moment into a pleasant confidential chat with the reader, indicating without any offensive egotism his individual opinion on some question of the day. Thus, we have here *obiter dicta* on the credulity of our own time, on the causes of cheerfulness, on the reasons why impudence is always admired, and on the connection between gambling and leisure. Some of these miscellaneous reflections are naturally open to criticism, but the execution of the book as a whole has remarkably little to which objection can be made. Sir Walter's account of the Dissent of the period is rather scrappy, and its patronizing air is not pleasing. It is not the fact that, owing to their exclusion from the universities, the dissenting ministers of the eighteenth century had, with few exceptions, ceased to be learned (p. 169). The mention on the very next page of the fact that Bishop Butler and Archbishop Secker were educated at Dissenting academies is sufficient evidence to the contrary. It was almost inevitable that in so large a volume there should be occasional repetitions, as for instance on pages 170 and 177.

Hitherto we have been considering this book mainly as an historical treatise. Perhaps its most useful function, however, will be as a kind of social tonic. A copy of it should be placed in the library of every social settlement, and every worker for purer civic and national conditions should dip into it now and then in moments of depression. That "the world moves" is the heartening lesson one brings away from its perusal. As we read especially the terrible chapter on the condition of the prisons, we ask ourselves in amazement whether it can really be of a century so recent as the eighteenth that these things are told. This section alone quite prepares us to accept Sir Walter's statement that London has changed more in the last sixty years than in the previous five hundred. We learn, too, how some of the greatest improvements in social conditions have been quietly brought about by instruments apparently trivial in themselves. Few people realize, for instance, what we owe to gas. It has transformed the poor man's evenings, which were formerly spent around the fire without other light or else faintly illuminated by a candle. "The cook had to hold a candle in one hand while she cooked with the other. The best-lighted street was provided with no more than a feeble glimmer at intervals; the shops showed one or two candles in the window and one or two on the counter. . . . The real terror of the winter was not the cold so much as the long hours of darkness." It was not until 1807 that gas was introduced into the streets of London, thereby immensely diminishing the opportunities for crime.

The Pathway to Reality: Being the Gifford Lectures Delivered in the University of St. Andrews by the Right Honorable R. B. Haldane, M.P., LL.D., K.C. London: Murray; New York: E. P. Dutton & Co. 1903. Pp. xix., 316.

It is always interesting to observe what are the hobbies to which leading public men resort for intellectual recreation. In Europe these at present are sufficiently various. The British Premier, Mr. Balfour, is well known among philosophers as the acutest advocate of a pious skepticism; the German Emperor has lately included theology in the sphere of his activities, and studied it sufficiently to award certificates of inspiration to approved characters in history; while the Pope, more modestly, contents himself with writing Latin verse. And now we find that the able politician and distinguished lawyer out of whom the Liberal party in England, if it should ever again be hoisted into power by the blunders of its opponents, seems extremely likely to make a Lord Chancellor, Mr. R. B. Haldane, is a philosopher, too, in his private capacity, and does not disdain to show us the pathway to reality—for the very adequate consideration of the Gifford Lectures. And he acquits himself gallantly and with the *sang froid* of the practised pleader, as doubtless Mr. Balfour also would do, if, through a turn of the political kaleidoscope, he should find himself at leisure to accept the same academic lectureship. Mr. Haldane, curiously enough, in philosophy as well as in politics, sits on the opposite side of the house from Mr. Balfour. He is all for reason, while Mr. Balfour is all for faith, and though, like the latter, he is disposed to take up an extreme view, he argues it with a truly statesmanlike urbanity. For while professing himself a Hegelian, he states his case with moderation, and is anxious not to shock by overstatement. He tries rather to minimize the difficulties and to smooth down the asperities contained in his brief, and indeed denies outright that Hegel sought to deduce what ordinary people call reality by "pure thought" (p. 121). Altogether, what he feeds to his readers is a very diluted form of Hegelism, flavored with wise saws and an eclectic tincture of modern scientific instances, which impress even when they are not taken from the best and most recent of authorities. And so the whole brew becomes quite palatable and even easy, always allowing duly for the difficulty of the subject and the abstruseness of the method. To real novelty, on the other hand, Mr. Haldane lays no claim; he wishes merely to reward the great conception of his master. His "pathway to reality" is thus conceived as a short cut to the results of Hegel's Dialectic, and in comparison almost seems a primrose path.

In his first book, entitled "The Meaning of Reality," Mr. Haldane discourses on his general philosophic standpoint; in his second, "The Criticism of the Categories," he essays to show how the abstract methods of the sciences engender contradictions, until from mathematics we are driven on to psychology. The lectures of the present year are, we understand, to show the value of this Hegelian method for conduct and religion. It will be seen, therefore, that in his present excursion Mr. Haldane only gets half way to reality, and examination shows that the scenery decidedly gains in interest in the second part. But it must be noted that he hardly attempts to parallel the famous Dialectic, which Mr. McTaggart, alone of modern Hegelians, seems to have found a practicable thoroughfare. Mr. Haldane does not venture to start, with Hegel, from Pure Being and its equivalence to Nothing. He starts from geometry, which, however abstractly it may be conceived, is still only the conceptual interpretation of the directly sensible and entirely concrete data of our sight and touch. And though Mr. Haldane probably has, like other Hegelians, his own peculiar view as to the precise nature of the "contradiction" of the "thesis" by the "antithesis" which evolves the "synthesis," his own method of progression can hardly be dignified with the name of contradiction. He never attempts to show that the assumptions of the more abstract sciences are inadequate for the work they are called upon to do. He only shows that they do not give a complete account of reality. But that was not what they were meant for. Thus he only proves that what was meant for one purpose will not necessarily do for another. If he really wants to get rid of abstractions, he must go back to the infinitely concrete, to the person who conceives all abstractions from a desire to refashion his experience into a more satisfying form. But how can a method ever reach a real concrete which begins by assuming that the individual observer is a figment of thought (p. 196)?

And so does not Mr. Haldane, too, start in the air? Does he not, by a *salto mortale* of abstraction, set his feet upon a pathway which leads straight away from reality to nowhere? Has he not made the fatal assumption that reality is something yet to be found, and to be wrested from the void and formless Absolute by titanic effort? And is it not truer and simpler to contend that reality we have with us always, and that *ultimate reality* is wherever our manipulation of experience stops? Of Mr. Haldane's method it is perhaps true to say that it is chiefly the first step that costs, but if it is a *faux pas*, the cost is irretrievable.

Perhaps, however, it is ungracious to scrutinize too closely a work delivered under the remarkable circumstances noted in the preface. Mr. Haldane there tells us that his lectures were extemporized speeches, and that he has printed "just what the stenographer took down, with verbal corrections." It is hardly fair, therefore, to expect contributions to eternal truth from an *ex-tempore* philosophy; but it is always interesting to hear what men in Mr. Haldane's position have to say about the ultimate questions of life.

Anthology of Russian Literature. By Leo Wiener. Vol. II. G. P. Putnam's Sons. 1903. Pp. xi., 500.

Professor Wiener's second volume contains extracts from fifty-three authors, from Karamzín to Merezhkóvski, some of whom have never before been represented in English. The translations in verse are for the most part selected from previous writers; those in prose are usually by the editor. A brief biographical notice precedes the extracts from each author, and a "Sketch of Russian Literature in the Nineteenth Century" serves as a general introduction to the volume.

The effect of the whole is in some ways disappointing. The different authors are arranged approximately in chronological order, with no attempt at a critical grouping. Hence a reader is at first confused and disconcerted. (Perhaps an educated Russian, fresh from Poe, Bret Harte, and Mark Twain, might be similarly distressed by a chronological anthology of American literature.) The puzzled reader is again baffled when he turns for help to the editor's sketch, for in it he finds no clear account of the different currents in modern Russian literature, not even a satisfactory grouping of the various authors according to schools. This fundamental knowledge our reader must seek elsewhere. But, once blest with some general notions on "the movement of the sixties" and kindred topics, he will return to the 'Anthology' with new joy, for the essays here translated from such critics as Byelínski, Dobrolyúboff, and Písareff will make this second-hand knowledge really direct and vivid, and he will now be prepared to appreciate the editor's admirable dicta on modern Russian literature as a whole; on its incessant occupation with social problems, curiously accompanied by a lack of any systematic philosophical foundation; on its political importance combined with juvenile, unpractical exuberance. Here Professor Wiener tells the truth with a sanity and simplicity that contrast strongly with the vaporous criticism too often indulged in by writers on Russian subjects. Finally, on a second reading, the chronological arrangement of selections may by its very confusion give the truest impression.

The different extracts are well chosen, though some, from their fragmentary condition, are hard to understand. Here a few further words of comment would have been helpful. The essays by Russian critics are, as has been indicated, of especial value; indeed, one may regret that the editor has not given more of them, say, part of Mikhaílóvski's critique on Dostoyévski, or Dostoyévski's panegyric on Púshkin, or Turgéneff's "Hamlet and Don Quixote," even at the risk of shortening the translations from the story-tellers. Traces of Russian influence on the editor's language are occasionally to be found in the volume. Thus, on page 288, "God be with him" translates too literally a phrase which might better be rendered "Deuce take him."

In his introductory notes on the different authors, Professor Wiener has given full lists of such of their works as are accessible in English. These bibliographical data reveal a wealth of translated material that could have been suspected by few even among those specially interested in Russian matters. This information alone would make the 'Anthology' indispensable to every student.

The Autobiography of Joseph Le Conte. Edited by William Dallam Armes. New York: D. Appleton & Co. 1903. 8vo, xvii., 337 pp. Ills.

Joseph Le Conte, scientist and teacher, known in two hemispheres and beloved wherever known, died in the Yosemite Valley, California, July 6, 1901. He was of mixed race, the blood of the French Huguenot and English Puritan mingling in his veins; and the characteristics of each were

blended in his temperament and colored his whole active life. He was born in Liberty County, Ga., February 26, 1823, and lost his mother a few months later. She was of Puritan stock, a descendant of an English colony (transplanted from Dorchester, Mass.) distinguished by rigid orthodoxy, an independent spirit, and high standards of morality. In this community slavery wore its least offensive aspect, and the duties of the owner to his wards were emphasized—facts which account for the lenient view taken by Professor Le Conte of a state of things into which he was born, but which has since been repudiated by civilization and condemned by moralists.

Young Le Conte inherited scientific tastes from his father, studied in country schools and at the University at Athens, Ga.; later taking the medical course in the New York College of Physicians and Surgeons, and graduating in 1845. In the following year he married, being in independent circumstances, and in 1850 became a pupil of Agassiz at Cambridge for fifteen months, and subsequently a professor in the University of Georgia. During the civil war he was in and of the South; and in 1868, when seeking an escape from the conditions which accompanied reconstruction, he was called, with his brother, to the University of California. Here, so far as the world is concerned, his active scientific career may be said to have begun, and here it continued until his death.

The present volume is edited by one of his pupils from manuscripts of an intimate character which he had prepared for the use of his children. It is likely to stand in the way of a more serious biography. Although a human document of undoubted interest, and perfectly comprehensible to one who knew the man, it is too intimate and offhand in character to give a just idea of Le Conte to a stranger. The breezy and buoyant optimism and Gallic lightness of spirit which made him so delightful a companion are hardly revealed by this book, which so abounds in unwarranted superlatives as to jar on the serious reader and annoy the friend jealous of his fame. Its publication, except for private circulation among his intimate friends, is, in our opinion, an indiscretion of which Le Conte himself would never have been guilty.

How to Make School Gardens: A Manual for Teachers and Pupils. By H. D. Hemenway, B.S., Director of the Hartford School of Horticulture. Doubleday, Page & Co. 1903.

That the style of this useful book leaves something to be desired, might appear from such a sentence as the following: "One reason why nearly 90 per cent. of the successful business men of to-day were brought up on the farm is because of the productive industry taught in early childhood in farm life." It seems as if the author meant to say: Ninety per cent. of the successful business men of to-day were brought up on the farm. They owe their success to the productive industry which they learned in early childhood—in their farm life. We have given a little prominence to this statement of the author's because it implies the occasion of his little handbook. The cultivation of self-reliance, the acquisition of some facility in handling things, and the training in habits of patience, neatness, and quick observation, he thinks to be well worth while in these days of abundant schooling. He believes, and in our opinion truly, that few appliances contribute more readily and pleasantly to the attainment of these ends than simple school gardens. That their usefulness is appreciated in Europe appears from the author's statement that more than one hundred thousand exist there. "France alone has more than twenty-eight thousand." In these gardens the pupils are shown practically the simpler details of horticulture, and are given charge of every stage of the cultivation, from the preparation of the soil to the gathering of the harvest. In this country the system has been successfully undertaken, and it is likely to extend rapidly. It can be combined with other instruction, as is well shown by the work at Hyannis, Mass. At the school gardens of the State Normal School there, the "products of the gardens are sold, the money is taken to the bank and deposited, and the children learn the method of depositing money and drawing checks."

This little volume contains, in the form of daily lessons, explicit directions for even young pupils, and this elementary instruction is offered in an attractive manner. Budding, grafting, and the like are given their proper place, and in most instances are so clearly described that even the most inexperienced teacher need not go astray. Of course, the teachers in their application of these rules will not find everything quite like Eden before the Fall, for they will have to contend not only with the "thorns also and thistles," but with the worst weed in our school system, namely, the stupid idleness of our atrociously long summer vacation. But since vacations are chiefly for the good of teachers, perhaps the unfortunate city pupils who have scarcely a glimpse of vegetation except in the parks, may be permitted to "run" the school gardens all summer. To them this handy guide will be serviceable. The author gives eight closely printed pages of references to recent publications on the subject; this indicates that school gardens are making their way.

We are a little sorry that the word plantain is here spelled plantin, and pusley spelled pussley; for these plants, although mere weeds, have figured in literature, and deserve the respect which correct orthography lends.

The Story of a Bird Lover. By W. E. D. Scott. The Outlook Co.

We have here the autobiography of the well-known ornithologist, Dr. W. E. D. Scott, curator of birds in the Museum of Princeton University. As such, it is something out of the ordinary in popular bird literature. It begins with the author's childhood, and shows that he was to the manner born, a fact that adds interest to his early recollections. He began his college education at Cornell, but ended it at Harvard, where he studied under Louis Agassiz, N. S. Shaler, J. A. Allen, and Asa Gray. From these masters he obtained a broad foundation such as is seldom possessed by writers on ornithology. After graduation he became connected with Princeton, and throughout the book he relates much that is of interest in connection with this New Jersey university. For the purpose of building up its ornithological collections he not only explored New York, New Jersey, and New England, but also made trips to West Virginia, Florida, Texas, Colorado, Arizona, and Jamaica. Although birds are his main theme in the account of these journeyings, he also gives valuable sketches of the scenery and people. He has the fine discretion not to weary his readers by tedious detail about his chosen subject, but changes his point of view often enough to give agreeable variety. Take, for example, his anecdote of a Mexican neighbor in southern Arizona, Jesus Maria Castro, very poor, but generous and gay, which illustrates the romantic spirit of his kind and their cheerful endurance of the vicissitudes of fortune. So Dr. Scott's chapter on Jamaica is highly interesting in its sketches of scenes, people and customs. Appended to the book is a bibliography of the author's scientific writings.

Many zoölogists appear to take less interest in a living animal than in a dead one; or, even if they do happen to be field naturalists, they seldom evince the fancier's interest in an individual animal. Dr. Scott, however, is truly a bird lover; and, more than that, he is actively interested in all live animals, even the domestic animals, which the up-to-date biologist with his head in the clouds so often ignores. The doctor's companionship with his red setter, Grouse, is one of the most charming things in the book, and his love for animals in general is pleasantly shown in the account of his domestic menagerie in his Arizona cabin. The lover of live birds will take especial pleasure in the description of what Dr. Scott calls his "laboratory for the study of live birds." It is the finest aviary in America, consisting of six rooms and containing 700 birds, some of which rear their young in captivity.

"Imagine a room, some twenty feet square, where over a hundred birds are enjoying liberty. Here are many robins, wood-thrushes, and bluebirds, the Baltimore and orchard orioles; bobolinks fly about as gayly as over the grass fields in spring. There are some eight or nine of these last-named birds, most of them males, and for two-thirds of the year, from January until late in August, their song is incessant. Here are thrushes from Europe, and the starling that characterizes that region; a number of kinds of starlings from India, and some babbling thrushes from that country. Meadow larks form an entertaining group as they stroll about the floor examining with apparent curiosity and interest every blade of grass of the fresh turf supplied daily. Song sparrows find congenial shelter in thickets, and blue jays, as well as green jays from Mexico, add to the vivacity of the scene. Cardinals and rose-breasted grosbeaks, as well as their relative the blue grosbeak, are all represented. Mocking birds, catbirds, and thrashers fly from one tree to another in the room (for it is large enough to have some six or eight small trees reaching from the floor to the ceiling), and seem to be as full of life and song and interest in affairs as though out of doors. Here is a robin with a nest in the corner sitting on her eggs, or a pair perhaps feeding young. In a calabash gourd at another point bluebirds find a place they like for breeding. It is a heterogeneous company, and the picture is at first confusing, both as to motion and sound. As one becomes accustomed to the scene, new details present themselves. A plover finds to his liking the vicinity of the shallow water tank which serves as brook or pond for these birds, and rails

peep out of the grass or run nimbly from one tussock to another, pausing on the way to inspect the attractions of the feed dishes. Many of these birds have been in captivity six or seven years, notably robins, bluebirds, grosbeaks, and orioles; while the plover has been a member of this society for five years."

The field chapters having exceptional ornithological interest are those which describe flamingoes and the nesting sites of herons and other plume birds. Dr. Scott visited these spots before and after the plume-hunters had raided them. The book, finally, is attractive also for what it does not contain, and impresses one with a sense of the knowledge that the author could impart if he had the ear of a student interested in any particular phase of bird life.

Slavery as an Industrial System: Ethnological Researches. By Dr. H. J. Nieboer. The Hague and New York: Martinus Nijhoff. Pp. xxvii., 474.

The author of this interesting volume is a pupil of Steinmetz, whose work on 'Die Entwicklung der Strafe' has been stimulus and model. Its pages, too, reveal both the virtues and the vices of the "exact" method initiated by Tylor, to which the ethnologists of Holland have taken such a fancy. The balancing of the descriptive and theoretical parts is fair, and there are a good index and a comprehensive bibliography, marred here and there by imperfect titles. An original feature of the book is the section (pp. 430-442), "Outlines of a Further Investigation of the Early History of Slavery." Both in content and treatment Dr. Nieboer's work is an improvement on Tourmagne and Letourneau. Naturally, as its title suggests and its unpartisan review of the data recorded corroborates, it is of a different order from the *Tendenzschriften* on both sides of the question in America. The principal topics treated are definition of slavery and distinction from kindred phenomena; geographical distribution; occurrence among the various economic and social groups of uncivilized mankind, mediæval Europe, etc.; internal and external causes. Among the chief causes of slavery may be reckoned: "open" as against "closed" resources, a high position of women (relieving the sex from drudgery and leading to slave-labor), commerce (favoring slaves who shall perform common every-day work for those devoting themselves to trade, and also some of the labor incident to the production of articles of commerce), the preserving of food over against living from hand to mouth (its preparation in large quantities in brief periods of time demands enforced labor), militarism (slaves as warriors), luxury (slaves as property add to the owner's influence and reputation), fixed habitations, living in large groups. Stimuli of considerable importance are also the existence of a slave trade, and the presence, in the environment, of "inferior" races. When women perform all the disagreeable work slaves cannot exist. The "noble" chase is also unfavorable to the development of slavery, which is much more prevalent among fishing peoples. Pastoral tribes seem to have no great use for slave labor, though it is by no means absent. With true agricultural tribes slavery is considerably more frequent. There appear to be certain "slave areas" in both hemispheres. The author points out how the sex factor prevents the complete enslavement of woman —there is a difference between slaves and subjected wives. Children, for another reason (they are always prospective masters and freemen), can hardly be true slaves.

For those who wish to get an idea of "the social value of slavery" this book is to be recommended as the most scientific study extant of the function of slavery among such of the savage and barbarous peoples of the globe (not all of them) as have practised it.

BOOKS OF THE WEEK.

Abbott, G. T. Macedonian Folklore. Cambridge (Eng.): University Press; New York: Macmillan. $2.50.

About, Edmond. La Mère de la Marquise. Edited by Murray Peabody Brush. Boston: D. C. Heath & Co.
